

PRIME STABLES LTD

Hand Crafted Equestrian Buildings

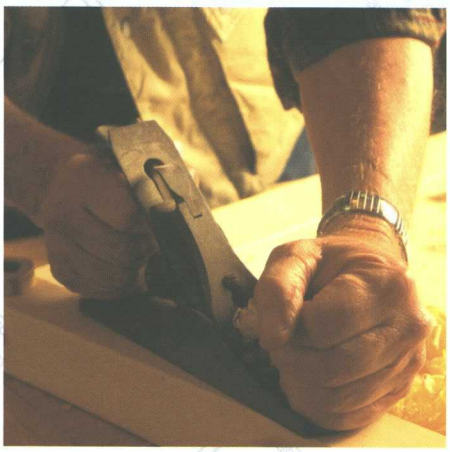
PRIME STABLES LTD

Hand Crafted Equestrian Buildings

Prime Stables are manufacturers and installers of pre-fabricated top quality timber equestrian and other related buildings. We deliver and install throughout England, Wales and Scotland. We can also supply to the Channel Islands and other European Countries.

We are a family run business located in the heart of the Sussex countryside. Our team have a combined experience spanning over four decades in the design, manufacturing and installation of equestrian buildings. You can rest assured that when you place your order, you are being looked after by a very experienced team of professionals.

Not only can we supply you with an individual stable or fully functional livery yard, we can also help you with advice on planning permission requirements and layout ideas so that your yard functions efficiently and comfortably.



We have show sites at our premises in West Sussex and in other locations throughout the UK should you wish to view our buildings.

Stable blocks

DEVELOPMENT SERVICES
27 APR 2010

Whether you require one stable or a fully comprehensive, professional and functional livery yard, Prime Stables can help you.

Our standard 'Burghley' range of loose boxes and associated buildings come supplied with all you need to stable your horses. You can add extra components to suit your requirements. - see page 18 for more information

Standard sizes of looseboxes:

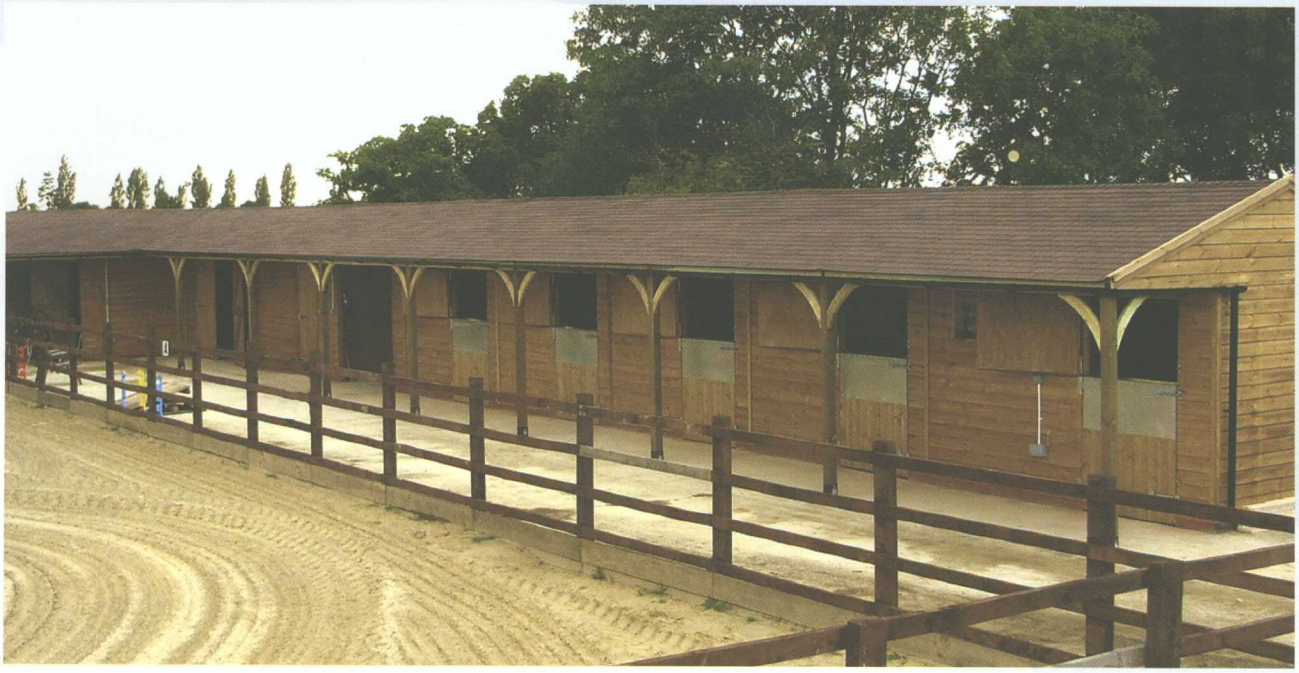
3.0m (10ft) x 3.6m (12ft)	more suited to ponies
3.6m (12ft) x 3.6m (12ft)	standard sized stables
4.2m (14ft) x 3.6m (14ft)	for larger horses or foaling boxes

Prime Stables only manufacture to order, therefore alterations to our standard buildings can be easily accommodated.

"Thank you for the installation of my new stable block and hay barn. I am absolutely delighted with them. I would like to say how impressed I was with the pre-sales service and the way you dealt with my enquiries. I was also extremely pleased with the speed that the buildings were erected and the detail to the finish. The guys were brilliant! Please pass my thanks to them."

Deborah Biscomb - *Northamptonshire*

Stable Blocks



Our standard 0.9m overhang can be extended to provide extra weather protection when working in and around the stables. Overhangs 1.5m or deeper are supplied with support posts and curved angle braces.

"Just to say how pleased we are with the quality of your product and overall professionalism of your company. Very good communication throughout and even when we made late changes (adding wings/internal grills) this presented no problems.

I can certanly recommend your stables and have no problem if possible future clients would like to view them."

Mr C. Underwood - *Pembrookshire*

Stable blocks

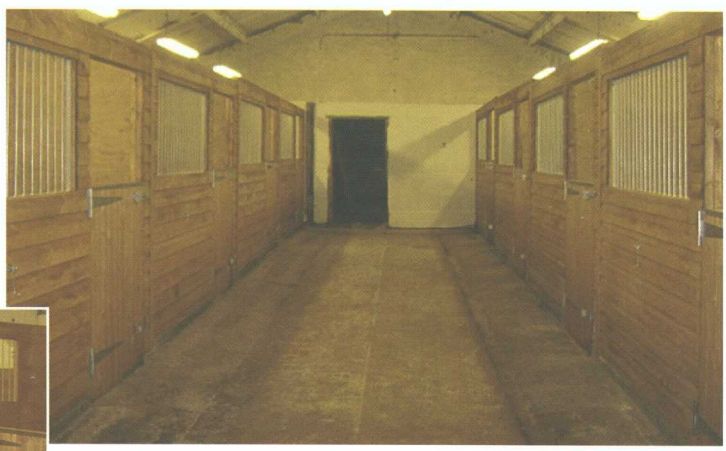
Designs featuring 'U' shaped stable blocks fit snugly into a compact space, which also has the added benefit of greater protection from adverse weather conditions.

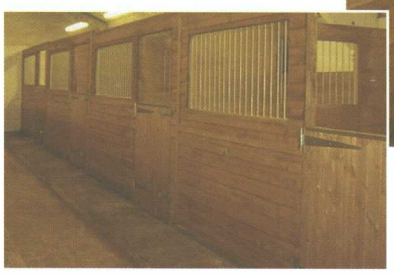
Adding a horsebox storage building to a design has proven to be a popular versatile option.

Internal Stables

Increasingly we are finding that many of our clients are converting existing farm buildings for equestrian usage.

If you have a restricted budget, we offer a pre-fabricated range of internal stabling solutions. Within a few hours of delivery you can enjoy a fully operational stable yard.



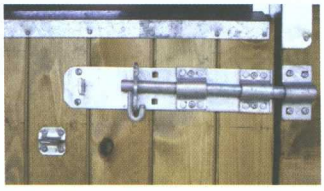


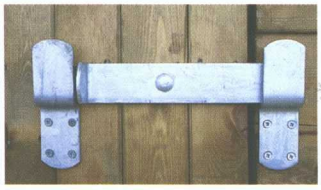
Corner Boxes

A Corner Box can maximise a busy working area.

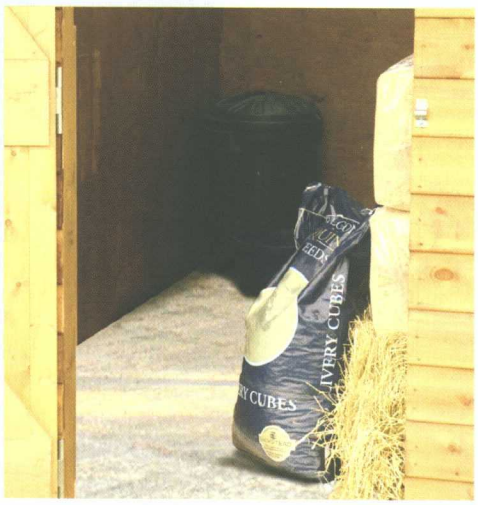
When planning your design, consider the distances you will need to walk on a daily basis when mucking out and all of those other daily duties you need to perform.

When you need three or more stables, adding a Corner Box can create a more compact, weather protected, work friendly area.





Tack & Feed Rooms



When considering your design, you will probably find that you will need an area to keep your tack and feed bins etc.

As standard our Tack-Rooms and Feed-Rooms are fully lined to eaves height together with boarded roof trusses.

This will not only aid security but allows you the option to screw hooks and rings, etc to keep all those important bits and pieces tidy.

Sizes are available from
1.8m (6ft) x 3.6m (12ft) to 6.0m (20ft) x 3.6m (12ft)

Hay Barns

To complete your working area, we recommend that you incorporate within your stable block design an area to store hay, straw, haylage etc.

Prime are able to supply a standard opening width of 2.1m (7ft) or wider if so required. Adding a pair of barn doors also creates a secure area.

Sizes vary from
3.6m (12ft) x 3.6m (12ft) to 12.0m (40ft) x 3.6m (12ft)

To work out bale storage capacity allow 10 bales per linear 300mm (1ft) i.e. 120 bales will fit into a 3.6m (12ft) long hay barn.

Hay Barns can also be supplied freestanding.

"This is just to say a big thank you for completing an excellent job on the hay barn. It was not an easy job to match it up with the existing building. I appreciated that you went to all that extra trouble adapting it to achieve a uniform look. You were efficient and helpful and really nice to do business with."

Mrs I. Lang
Hampshire

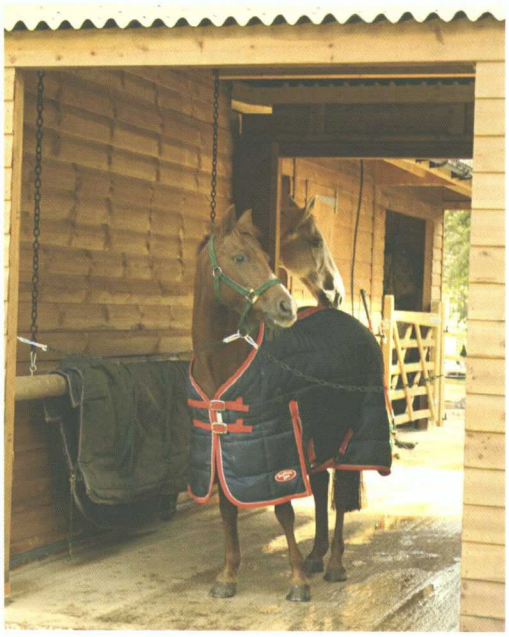
Covered Walkways & Ride Through Archways

Covered Walkways have a variety of uses, not only can they provide easy access to your field or muck heap, but they also provide an area that can be used by farriers or vets, clipping, washing, show preparation or even somewhere to dry your rugs.

Sizes available from 2.4m x 3.6m to 3.6m x 3.6m

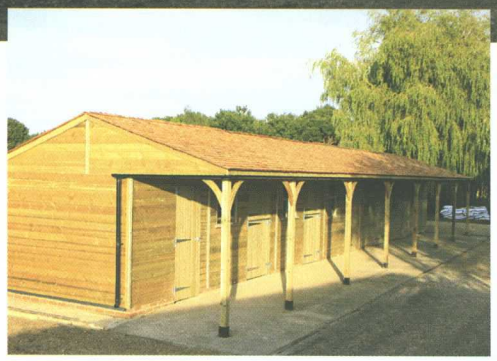
With the additional height our Ride Through Archways can be used as vehicle storage and if required the archway can be changed to a square front.

Sizes available from 3.6m x 4.5m to 4.5m x 4.5m



Ride-Through Archways create an impressive entrance into your stable yard and at the same time create a multi-functional building.

Bespoke Stables



"We are so pleased with our new stables. We have received excellent customer service. I have really appreciated the friendly and helpful way I have been treated and construction was quick, efficient and thorough. We made a good decision and friends have been impressed by the quality."

Ruth and Bryan
County Durham

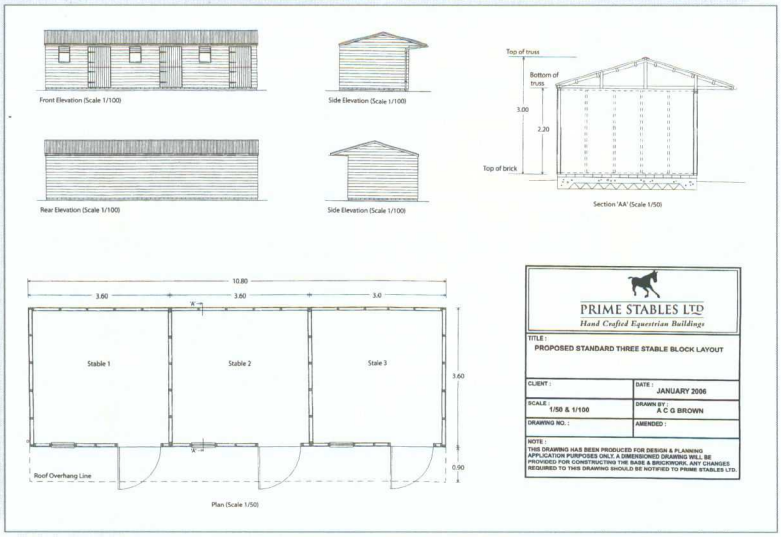
The 'Burghley' Range of loose boxes are all prefabricated at our workshops located deep within the heart of the West Sussex countryside.

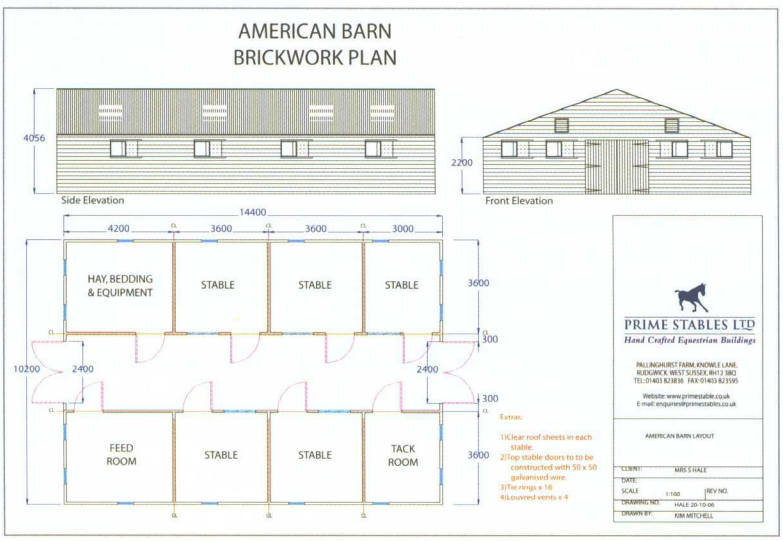
By having a modular design we are able to supply you at very competitive prices without compromising on quality.

We do, however, have a number of clients who require a more bespoke package with differing roof finishes, cladding, large overhangs, steeper pitched roofs with support posts on the front elevation, along with many varying degrees of design features.

By having a Cedar Shingle Roof finish you can have a unique design that will enhance your surrounding buildings and possibly add value to the land that your buildings are sited upon.

Each design is individually quoted for, based upon specification, location and finishes.





Architectural Drawings

We have found through experience that should you be considering one or possibly two small pony boxes within your garden, you may not need planning permission.

However, our advice is to always have a consultation with your local authority planning department to prevent any possible problems after installation.

Larger installations do require planning permission. We can assist you with your planning application by supplying you with the required scaled architectural drawings for you to submit to your local authority.

This service is available for a nominal fee, which is refunded against the value of your order.

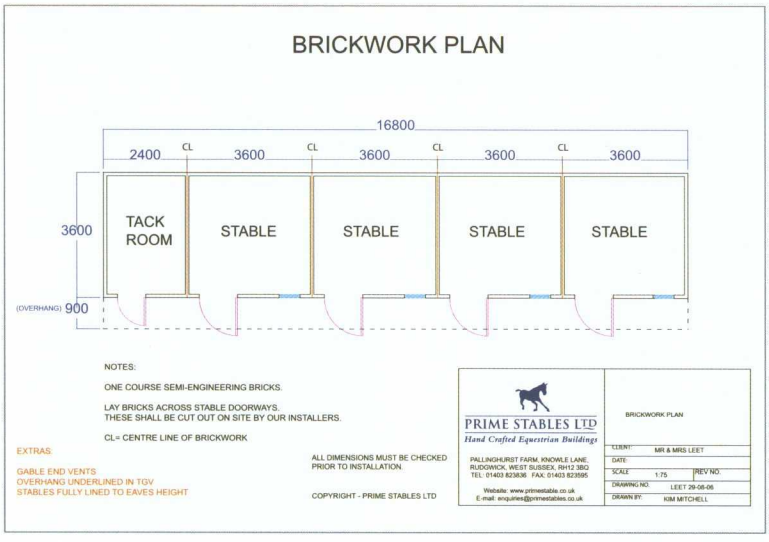
We shall supply you with six copies. Five will be needed for your application and the sixth is for you to keep for discussions with your groundworker, electrician and plumber if required.

Once you have received your individually drawn plans, you will be able to visualize how your yard will look.

Groundworker's Drawings

Not only are we able to supply you with your bespoke plans, but on receipt of your order we shall provide you with an architecturally drawn, individual brickwork plan for your groundworker to follow.

One course of engineering bricks is required for us to site the walls of the buildings upon. This ensures that rainwater does not penetrate underneath your building and soak your horses' bedding.



Mobile Field Shelters

Here is a 3.6m (12ft) x 3.6m (12ft) Mobile Field Shelter without an overhang being quickly and conveniently transformed into a Mobile Stable with one of our Stable Conversion Packs

There are many advantages to owning a 'Prime' Mobile Field Shelter.

Mobility

Your shelter can be moved from location to location thus reducing the need for a field shelter in every paddock. Simply tow your mobile to its new location as and when it is required.

No need for Planning

Mobile Field Shelters do not need planning permission as they are classed as equipment rather than buildings. For further clarification please contact our office where we shall be only too pleased to help and send you the necessary documented proof totally free of charge should your local authority require it.

Adaptable

By simply bolting the stable conversion pack into your shelter, you will have a mobile stable or pair of stables. A real benefit when you need that extra box or isolation stable.

Alternatively simply add either wooden or metal gates or even slip rails and you have a useful holding area.

Our clients have told us that they have found the stable conversion pack for our mobile structures to be one of the best on today's market.

On our website we have a short movie showing one of our Mobile Field Shelters being towed by a four-wheel drive vehicle.
www.primestables.co.uk

Mobile Field Shelters

"Just a note to let you know how very pleased we are with the mobile field shelter supplied and erected by your excellent work team in our field. The quality of all materials used was of the highest quality, even at your very reasonable prices. The speed at which our order was completed i.e. 3 weeks from enquiry to erection was exceptional and the horses have now got shelter as the weather is deteriorating fast."

Chris Merton

West Sussex

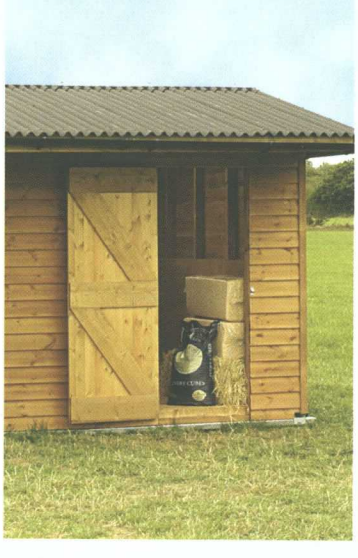
Combined Field Shelter, Stable and Tack Room

New to the comprehensive range of mobile equestrian buildings that 'Prime' have developed over the years...

... comes this innovative design that will provide you and your horse with a secure, dry, versatile and unique building.

A stable or shelter is provided on one side, with a raised timber floor to store feed-bins, straw and tack on the other side, all securely locked up and completely mobile.

With no planning permission needed and no groundwork to prepare, this has proven to be the ideal entry level building for those just starting out on a new equestrian interest.



Mobile Field Shelters

Locating Mobile Field Shelters in a group

Grouping mobile units can be of great benefit whilst awaiting the approval of a full planning application for a more comprehensive, permanent yard.

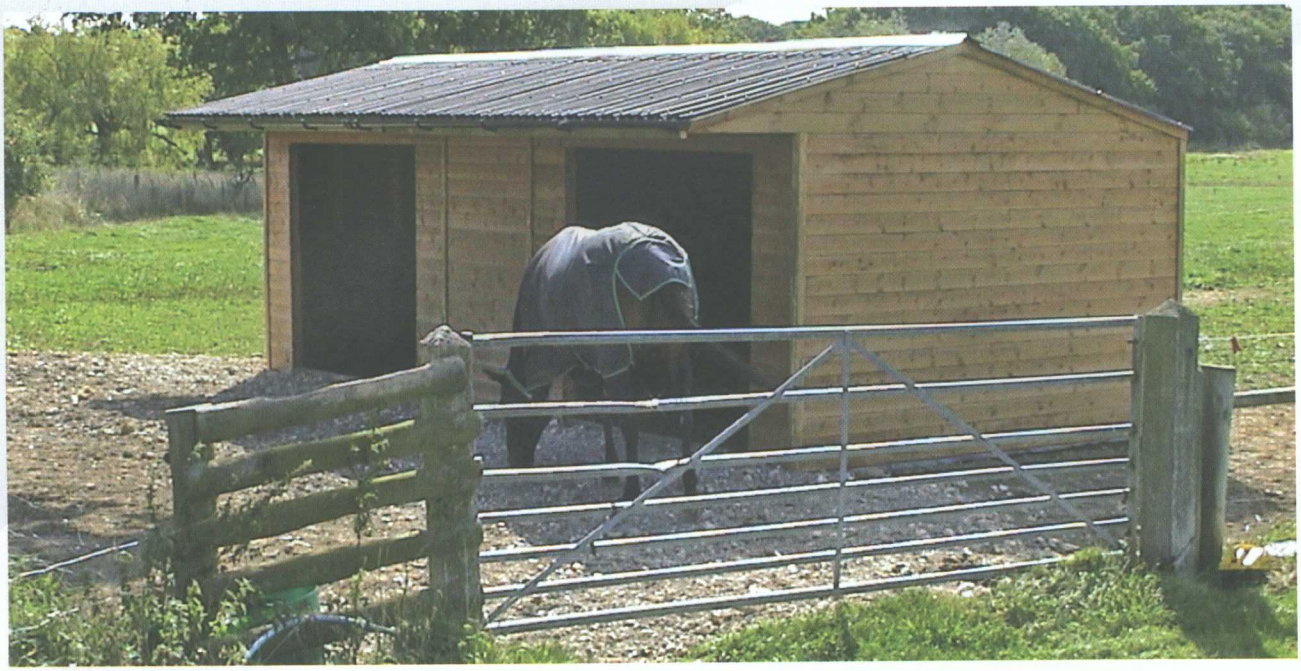
Our client on this occasion had the need to quickly have a temporary home for her horses. Prime were able to supply within 10 days of her order being placed.

As the Mobile Field Shelters did not need planning permission this was the ideal solution.

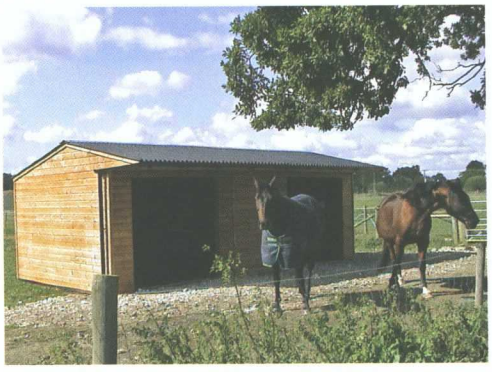
"We have been very pleased with the service we received, even our fencing contractors were impressed with how quickly and well the stables were erected. I will be giving your number to my neighbour who was equally impressed"

Helen Marshall
Oxford

Fixed Field Shelters



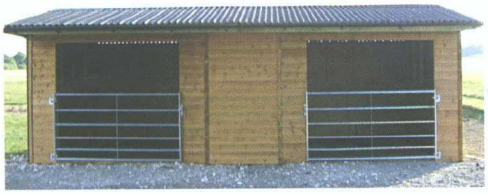
Whether it is the hot sun or cold winds and driving rain, a field shelter can provide protection for your horses.



Sizes can vary from:
3.6m (12ft) x 3.6m (12ft) to 12.0m (40ft) x 3.6m (12ft) and beyond.

Fixed Field-Shelters do need some groundwork preparation. The most economic option is to use railway sleepers to create a perimeter base for the walls to sit on, or a concrete base with one course of bricks. In each instance 'Prime' will supply a layout plan to enable the required preparation.

With larger field shelters our advice is to have two openings of at least 2.1m (7ft) so that smaller horses do not feel that they are being trapped by a more dominant horse. However these openings can be tailored to meet your individual requirements.



Section 'AA' (Scale 1/50)

"I want to thank you for the excellent service you provided. The field shelter is excellent. I'm extremely pleased with it."

Mrs Cynthia Portus
West Sussex

Garages & Workshops

Our Garages and Workshops are built to the same high standards as our equestrian buildings.

As well as our standard range we can manufacture to your specific requirements, so if you have a design in mind please send us a sketch and we will send you a quotation by return.

Garages are supplied as standard with our 2.4m wide barn style doors.

Workshops are supplied with a single door and fixed windows. Casement windows available on request.

Standard roof is black Onduline underlined with Smartply. Alternative roofing options are available on request – Coloured Onduline, Felt Shingles or Timber Cedar Shingles.

Garden & Office Buildings

What better way to create that extra room than with one of our garden buildings.

Whether you are looking for an office, pool or summer house we will be pleased to discuss your requirements.

Because all of our buildings are made to order we can supply at various levels of interior finish to suit your individual requirements and budget.

Available with a wide choice of doors and windows, positioned to suit.

Optional Extras & Roof Finishes

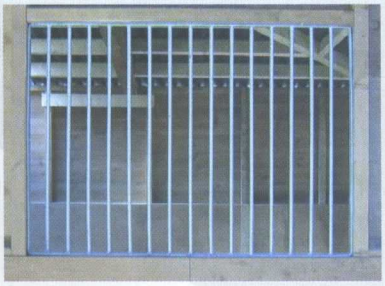
See price list for details

Overhang Lining

Underlining your overhang is one of the most distinctive ways to finish your stables. This example shows the underlining in plywood (lights not included), also available in shiplap or TGV (Tongue, groove and 'V' jointed) timber.

Clear Roof Sheets

By simply adding a clear roof sheet to each stable, you gain natural lighting and can save electricity with the subsequent benefit to the environment and your utility bills.



Talk Grill

Talk grills are beneficial for a nervous horse who doesn't like to be alone. Simply ask for one to be fitted into a dividing wall.

Door Frame Protection

As standard bottom doors are fitted with an anti-chew strip along the top of the door. We can also supply extra deep door protection and top door frame protection.

Gable End Vents

For added ventilation a Gable End Vent can prove to be a great addition to your stables.

Back Guttering

Front guttering is supplied as standard and back guttering is available. We recommend back guttering when having windows or doors on the rear elevation.

Roof Finishes

Our standard roof finish is Black Onduline. This corrugated roofing is very light-weight, yet extremely strong, and has been wind tested up to 120mph.
It also comes with a 15 year manufacturer's warranty. Popular for its durability and creates additional ventilation.

Colours available:
Black, Green, Red, Brown

Please call for details on other roof finishes available.

Standard Onduline with Black finish

Onduline Green

Felt Shingles

Cedar Shingles

How to Find us

Opening Hours

Monday - Friday 9am - 6pm

Saturday 9am - 1pm
