

VIVARA PRO WOODSTONE SEVILLE NEST BOX – OVAL

SPECIES GROUP: SONGBIRDS

MATERIAL: WOODSTONE

OUTER DIMENSIONS (CM): 21 x 30.5 x 19

INNER DIMENSIONS (CM): 12 x 24 x 12

WEIGHT: APPROX 6KG

CHAMBERS: 1

ENTRANCE HOLE: OVAL

The Vivara Pro WoodStone Seville Nest Box (Oval) is made from WoodStone, a mix of concrete and wood fibres. This material is tough and long-lasting, and helps protect against damage from predators such as woodpeckers, cats and squirrels.

WoodStone also provides good insulation, helping to keep the nest at a more stable internal temperature than a standard wooden box. This can be particularly useful during the breeding season.

The oval entrance is preferred by some species, including House Sparrows and redstarts. House Sparrows may also use the wider opening as a perch while defending the nest site.

SUITABLE SPECIES:

House Sparrow, Redstart, Tree Sparrow, Nuthatch, Great Tit, Blue Tit, Pied Flycatcher (Bonte Vliegenvanger)

SITING:

- Hang using the supplied screw or nail at a minimum height of 2 metres on a tree, fence, or building
- Face the box between northeast and southeast
- Avoid siting the box where it will be in direct sunlight all day
- Do not add nesting material
- The entrance should be kept clear for a safe approach
- The box can also be fixed to a tree using Velcro by rotating the rear suspension bracket 180 degrees

MAINTENANCE:

- Clean the nest box once a year after the young birds have fledged
- To open the box, turn the two screw hooks at the front 180 degrees and remove the front panel
- If a second brood follows, clean the box again in late autumn
- Check the suspension fixings each year to make sure they remain secure
