Categories: Discharge of Conditons

Good Morning Craig,

Thank you for your letter dated 14th November relating to the site at Earl Shilton planning ref 11/00068/EXT.

I had thought that we had provided you with this information but obviously this didn't get sent to you, so I apologise for this oversight.

Attached is the information you require in respect of condition 5 which relates to the drainage.
The contractor has also provided the following information:

Please find attached the test results for the soakaways and also the drainage drawing which shows the road gullies going into the two soakaways in the road areas, the point where the foul drains connects to the main sewer is in the top right hand corner of the drawing the manhole above where it says Type E in a box. This is where the original pipe for the existing bungalow was .

With regards to condition 2, we would confirm that the tiles used are Marley Mendips on the main roofs with smaller concrete plain tile to the roofs to the bay windows.

If you should require any further information please let me know.

Kind Regards

Simon
