Design and Access Statement:

To inform all concerned, this planning permission is being sent on behalf of the customer by Hughes Network Systems Ltd, we are responsible for installing dishes for the upgraded National Lottery terminals A short site survey has been carried out suggesting the best place to site our satellite, both sympathetically and to accommodate building access.

Thales, our experienced installation company state that site access will be largely unaffected as they will rarely be at one site for more than half a day.

The satellite is 0.74cm elliptical and grey, pictured below (though can be re-sprayed if requested), to be fitted facing south on a to be determined spot of the site, the photos provided by the initial survey will be the most likely spot however if the engineer finds a problem (signal/access) or a better place then they may see fit to resite it.
