

Tree number	Common name <i>Genus species</i>	Tree height (m)	Trunk diameter (cm)	Approximate branch spread (m)	Age	Physiological condition	Structural condition	Comments and recommendations
G13	2no English yew <i>Taxus baccata</i>	13	77–81	Up to 7	M/ OM	A/B	A	Two contemporary yew trees thought to be in excess of 250 years in age. Tree closest to the path features slightly lower crown density, although is still fair. Small diameter deadwood throughout both. However, of no significance on health and safety grounds. The tree closest to the boundary currently affords at least 1m clearance to the hipped roofed garage of the neighbouring property. No work required at present on safety grounds. Trees are of very high value. Maintain in an ivy free state.
14	Chinese juniper <i>Juniperus chinensis</i>	6.5	35 equivalent	1.5	EM	B	B/C	Tree grows tight up to edge of path, necessitating the cutting back of low branches and exposing brown inner growth that will no longer rejuvenate. Low stems have begun to splay apart. Some growth has been tied back with blue polypropylene rope. Monitor for signs of further stem subsidence. Tree has limited longevity
