

To whom it may concern,

I am writing to you today regarding our planning application for a dropped kerb to the front of our property. There is a need for this due to the parking situation outside the premises, which can be described as poor at best. The 'turning circle' is routinely full of vehicles as well as the width and a half roadway directly in front of our current drive entrance. All the above leads to us to reverse down the road for around 60m to be able to access our driveway which is a concern for everyone involved. We have spoken to the owners of the vehicles on several occasions which has been met with hostility and a lack of understanding.

Additionally, we routinely need access to the property with a large trailer which when coupled to the tow vehicle is around 40ft in length with the poor parking standards this is an accident waiting to happen. In fact, a contractor working on the property has already written one of our vehicles off due to the situation.

Furthermore, two houses four properties away already have an interconnect dropped kerb measuring around 18m in length. If granted permission our total length of dropped kerb would measure the same.

I have attached a few photos of the parking below for your perusal if you require further photos, please do not hesitate to contact us.

Kindest Regards

Mr and Mrs A Veli
