LIGHTING SPECIFICATION
FOR THE
PROPOSED MANÈGE
AT THE LAND TO THE REAR OF
BREACH FARM
BREACH LANE
EARL SHILTON
LEICESTERSHIRE

The car park and manège will be lit by two 150w Metal Halide flood lights. These will be controlled by switches inside the building or activated by movement/heat sensors.

Both lights will be directed slightly downward to minimise the spillage and glow of the site and to avoid causing a detrimental effect on the open countryside.

The development will not be used before dawn throughout the year, nor will it be used after approximately 19.30 hrs.

The site plan attached shows the light positions. These will be attached halfway up the side of the building.

LANDSCAPING PLAN
FOR THE
PROPOSED MANÈGE
AT THE LAND TO THE REAR OF
BREACH FARM
BREACH LANE
EARL SHILTON
LEICESTERSHIRE

I can confirm that we will be planting a selection of indigenous deciduous trees along the points marked X on the plan to shield and hide the property from its surroundings.
