

1. Access and a 3 phase power cable (including a currently un-used phase provision) is existing underground between 33 Merrylees Road and the Kennel buildings at the Southeast of the designated ownership.
2. The client intends that the connection between the existing kennels and the proposed array is made via the dry lot kennel yard, and not in the field above.
3. The access described is not public, and tended/ reared dogs are transferred from 33 Merrylees to the kennels via walking across the field access shown on the plans.
4. Alternative vehicle access is available to the South via Bagworth Road, as the client enjoys a right of way. The access shown on the plans is temporary (for construction), However this can be amended if stipulated to use the Southern West to East access.
5. I have attached a revised plan (rev A3) to show the clarified cable run specification.

Please forward the above corrections to County Ecology for a further review, due to our hope that this development is deemed as without a potential negative impact on resident species in the vicinity. Please note it is also my understanding that the client's family is in ownership of the pond to the East, and collectively they are highly environmentally concerned to preserve these habitats for the benefit of local wildlife.
