	C	Final

### Abstract

Heritage Archaeology Ltd has been appointed to prepare a historic environment assessment (archaeological desk-based assessment and heritage impact assessment) in relation to the proposed development of a single dwelling on land at Church Road, Witherley.

The site lies within the Witherley Conservation Area. It is also within the historic settlement core of Witherley, a non-designated heritage asset.

To the south of Witherley, the site of a Roman camp at Mancetter and the Manduessedum Roman villa, settlement and industrial complex along the A5 Watling Street Roman Road, attest to significant Roman occupation activity in the area. There is some evidence for continued settlement into the early medieval period, although Witherley is not documented as a settlement until the early 13<sup>th</sup> century. The medieval grade I listed Church of St Peter is to the south of the site and is likely to have been within the core of the medieval village.

Recent archaeological work in the area of the proposed development, undertaken in connection with the planning permission for use of the land as a cemetery and car parking area, identified a ditch and post holes of Roman date and a substantial medieval ditch.

In relation to archaeology, the site therefore has potential for remains to be present, particularly in relation to Roman and medieval activity.

In relation to built heritage, the site is well screened from the surrounding area by mature trees and not within the setting of any designated heritage assets. It is noted in the conservation area appraisal as a key private green space, due to having been carefully landscaped. The current condition of the site does not reflect this, and provides an opportunity to enhance the character and appearance of the conservation area.

# 1 Introduction

- 1.1. Heritage Archaeology Ltd has been instructed to produce a Historic Environment Assessment (HEA) in relation to a planning application for a single dwelling on land at Church Road, Witherley.
- 1.2. This Historic Environment Assessment (HEA) considers the likely effects of the Proposed Development on known and potential archaeology and built heritage (collectively known as heritage assets) and affects that could arise because of development within the settings of heritage assets. This assessment also considers how the proposal relates to the character and appearance of the Witherley conservation area.
- 1.3. This report has been prepared in accordance with the policy provisions at Paragraph 207 of the NPPF.

## Site location

- 1.4. The Site location is on land to the west of Church Road, Witherley, Leicestershire, CV9 3NA, grid referenced SP32499741.

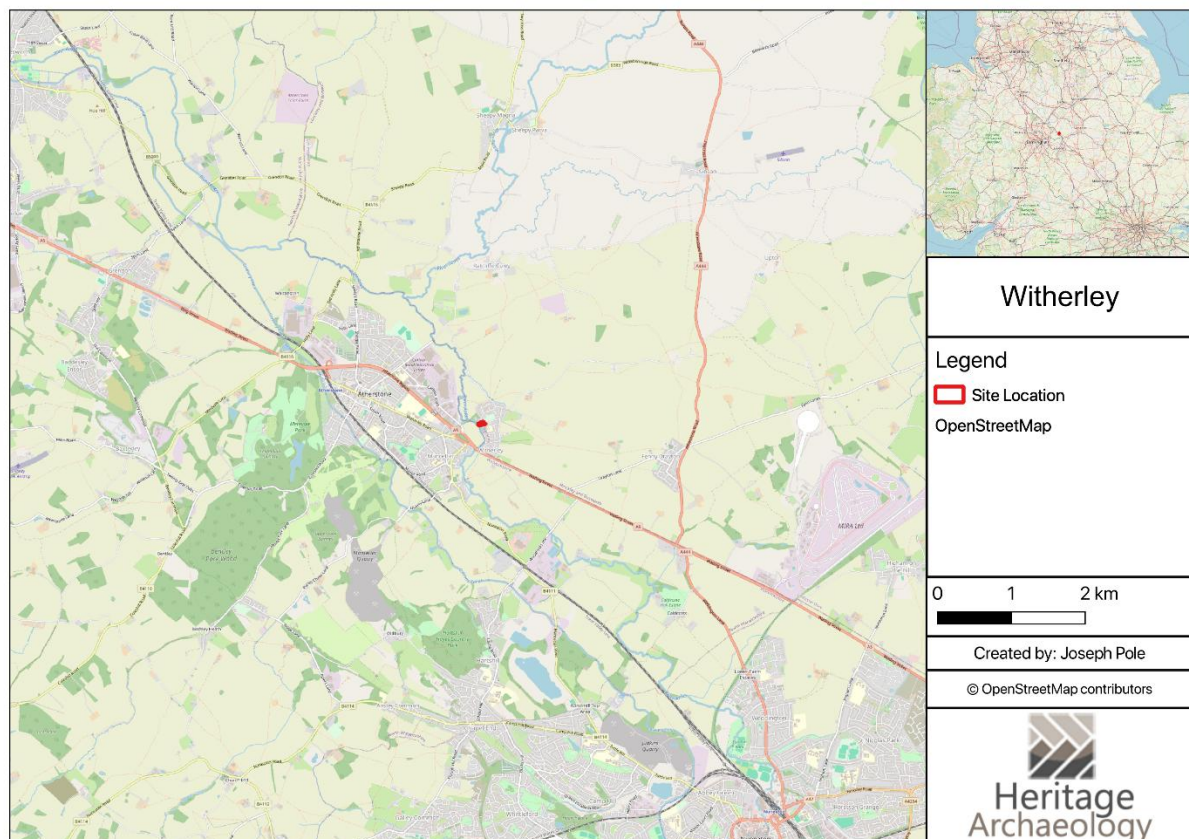

Figure 1: Site location

---

## Planning context

### *The National Planning Policy Framework (NPPF), 2024*

- 1.5. The National Planning Policy Framework (NPPF), December 2024 (with amendments in February 2025), sets out the relevant national policy provisions for the historic environment in Chapter 16. Relevant to this heritage statement are:
- Paragraph 207: An applicant should describe the significance of any heritage assets affected by a planning application, the level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance.
  - Paragraph 212: When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance.
  - Paragraph 213: Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification.
  - Paragraph 215: Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use.
  - Paragraph 216: In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset."
  - Paragraph 218: Local Planning Authorities should require developers to record and advance understanding of the significance of any heritage assets to be lost (wholly or in part) in a manner proportionate to their importance and the impact.
  - Paragraph 220: Not all elements of a Conservation Area or World Heritage Site will necessarily contribute to its significance. Loss of a building (or other element) which makes a positive contribution to the significance of the Conservation Area or World Heritage Site should be treated either as substantial harm under paragraph 207 or less than substantial harm under paragraph 208, as appropriate, taking into account the relative significance of the element affected and its contribution to the significance of the Conservation Area or World Heritage Site as a whole.
  - The NPPF Glossary sets out that a Heritage Asset is "A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. It includes designated heritage assets and assets identified by the local planning authority (including local listing)."

---

### *Local Plan*

- 1.6. The **Hinckley and Bosworth Borough Council Core Strategy** Adopted December 2009 includes Spatial Objective 11: Built Environment and Townscape Character which sets out the Council's objective to "safeguard, enhance and where necessary regenerate the borough's distinctive built environment including its wider setting particularly that associated with Conservation Areas, Listed Buildings and historic industries".
- 1.7. Policy 12: Rural Villages, in relation to Witherley, the Core Strategy sets out that the Council will "Require new development to respect the character and appearance of the Witherley Conservation Area by incorporating locally distinctive features of the conservation area into the development".
- 1.8. The **Witherley Conservation Area Appraisal** (Hinckley and Bosworth Borough Council 2007) sets out that it will be necessary to "Ensure new development contributes positively to the character or appearance of the Conservation Area: siting, scale, design and materials used."

### **Best practice and guidance**

- 1.9. The following guidance documents have been referenced in preparing this report.
  - Historic Environment Good Practice Advice in Planning 2, *Managing significance in decision-taking in the historic environment*, Historic England, 2015
  - Historic Environment Good Practice Advice in Planning 3, 2nd Edition (GPA3): *The Setting of Heritage Assets*, Historic England, 2017
  - Conservation Principles; Policy for the Sustainable Management of the Historic Environment, Historic England 2008
  - Historic England, Advice Note 12 Statements of Heritage Significance; analysing significance in heritage assets, Historic England 2019
  - Historic England Conservation Area Appraisal, Designation and Management, Historic England Advice Note 1 (2nd Edition), Historic England 2019
  - Chartered Institute for Archaeologists, Standard and guidance for historic environment desk-based assessment, CIFA, 2020, and Code of Conduct (CIFA, 2020).
- 1.10. Historic England, in GPA2 (pages 2-8), provides advice on the assessment of significance as part of the application process. The guidance notes that it is important to understand the nature, extent and level of significance of heritage assets (the heritage value) that may be affected.
- 1.11. Historic England, at paragraph 9 (page 4) of GPA3 note that "*Setting is not itself a heritage asset, nor a heritage designation ... Its importance lies in what it contributes to the significance of the heritage asset or to the ability to appreciate that significance*".
- 1.12. Conservation Principles sets out Historic England's recommended approach to making decisions about the historic environment. Also of relevance is the guidance in HEAN12

Statements of Heritage Significance (Historic England 2019) which sets out that heritage interest comprises the following:

- Archaeological interest (evidential value): There will be archaeological interest in a heritage asset if it holds, or potentially holds, evidence of past human activity worthy of expert investigation at some point.
- Architectural and artistic interest (aesthetic value): These are interests in the design and general aesthetics of a place. They can arise from conscious design or fortuitously from the way the heritage asset has evolved. More specifically, architectural interest is an interest in the art or science of the design, construction, craftsmanship and decoration of buildings and structures of all types. Artistic interest is an interest in other human creative skills, like sculpture.
- Historic Interest (historical and communal value): An interest in past lives and events (including pre-historic). Heritage assets can illustrate or be associated with them. Heritage assets with historic interest not only provide a material record of our nation's history but can also provide meaning for communities derived from their collective experience of a place and can symbolise wider values such as faith and cultural identity.

## **Method of assessment**

1.13. Data on non-designated heritage assets was obtained for the site and a buffer of 1km. Data on designated heritage assets was obtained for a 250m study area. These study areas were defined following an initial site appraisal and 'step 1' setting assessment. The following data sources were consulted:

- Leicestershire and Warwickshire Historic Environment Records (HERs);
- Hinckley and Bosworth Borough Council data for planning policy and conservation areas;
- National Heritage List for England (NHLE), Historic England data on designated heritage assets;
- The National Record of the Historic Environment, maintained by Historic England and viewed via the Heritage Gateway website; and
- Archive data and historic Ordnance Survey mapping.

## ***Determining the level of effect***

1.14. The level of effect has been determined by comparing the heritage value of the asset with the degree of change to that value. An important consideration is whether the adverse impact seriously affects a key element of the special interest of the asset (whether archaeological, historic, aesthetic or communal); it is the degree of harm to the asset's significance rather than the scale of the development that is assessed. The conclusions in this report identify the overall level of effect on heritage assets in accordance with the following scale:

Heritage Value	Magnitude of change			
	<i>High (significant loss of heritage value)</i>	<i>Moderate (some loss of heritage value)</i>	<i>Low (limited loss of heritage value)</i>	<i>Negligible (little to no loss of heritage value)</i>
<i>High (nationally designated)</i>	Major	Major or medium	Medium or minor	Minor or none
<i>Moderate (regionally significant)</i>	Major or medium	Medium or minor	Minor or none	Minor or none
<i>Low (locally significant)</i>	Medium or minor	Minor or none	Minor or none	None
<i>Negligible</i>	Negligible	Negligible or none	None	None

1.15. In policy terms (NPPF paragraph 214 and 215), harm to the significance of a designated heritage asset can be substantial or less than substantial. Planning practice guidance identifies that substantial harm is a high test. This is normally associated with total loss of a heritage asset's significance and is equivalent to a major effect in the scale set out above. Less than substantial harm is a broader spectrum, with negligible effects that are at the lowest end of the scale and medium level effects at the higher end.

---

## 2 Historic and archaeological context

- 2.1. The geology of the Site is recorded by the British Geological Survey as Gunthorpe Member Mudstone overlain by River Terrace Deposits (sand and gravel). The village lies on relatively high ground above the valley of the River Anker, which lies to the west of the site and demarks the boundary between Warwickshire and Leicestershire. The site is under grass and undulates with the land falling to the River Anker and towards the church to the south.

### *Prehistoric*

- 2.2. Prehistoric activity is recorded within the study area; flint findspots have been reported on both sides of the River Anker. These date to the Neolithic to Bronze Age periods. Some cropmark evidence, while undated, could indicate the presence of late prehistoric settlement in the area. It is common for the gravel terraces above river valleys to have attracted settlement in the prehistoric periods, and for Roman towns to develop in previously populated areas.

### *Roman*

- 2.3. Following the Roman occupation of England in 43 AD, a military infrastructure was rapidly established. The Roman vexillation fort at Mancetter is an example of the temporary camps established in this early period of Roman occupation. The area was to become strategically important during the Roman period, due to its location on the route of Watling Street, a major Roman road and on the River Anker providing both river and road transportation links. The settlement of Manduessedum was established to the east of Mancetter Roman Fort with a defended settlement known as a 'Burgus' and ribbon settlement along Watling Street, with the remains of a Roman villa complex to the north. The settlement was also the focus of a Roman pottery industry, with over 70 kilns excavated from a field to the south of the Burgus.
- 2.4. On land to the north of Witherley, the site of a Roman villa has been identified through archaeological field work. Within the village, finds of Roman pottery have been made. This includes within close proximity to the site where, in 2021, trenched evaluation identified a ditch and post holes which appeared to be Roman in date.

### *Post Roman - Medieval*

- 2.5. Burials of 5<sup>th</sup> – 6<sup>th</sup> century date were found during archaeological excavations at the Roman villa at Mancetter. A further find of an Anglo-Saxon brooch was also made at Mancetter, and finds of later 11<sup>th</sup> – 13<sup>th</sup> century material have been made from Mancetter. This indicates a continuity of settlement within the area of the Roman villa during the post Roman period and into the medieval period. The village at Witherley was likely to have also been extant during this period, as the place name elements indicate an Anglo Saxon origin, with the name meaning "woodland clearing of a woman called Wigthryth". The village is not documented until the early 13<sup>th</sup> century, by which time the settlement focus appears to have shifted slightly from that of the Roman settlement.

- 2.6. The church at Witherley dates from the medieval period and appears to have been a focal point within the medieval village which extended along the River Anker between Watling Street and Hall Lane. This is indicated by the medieval street pattern, the extant earthworks of ridge and furrow which demonstrate the former open fields of the medieval village and later mapping which shows the settlement pattern prior to later post medieval development, for example the 1779 map, below:

Figure 2: John Prior's map of Leicestershire, 1779<sup>1</sup>

- 2.7. The site lies within the historic core of Witherley in an area potentially occupied during the medieval period, particularly along the frontage to Church Road. This is indicated by the later map by Greenwood, 1786. The 2021 archaeological work within close proximity to the site also identified a substantial medieval ditch, potentially indicating a property division. Medieval pottery has also been found to the north of the village, and the site of a watermill is also of possibly medieval date.

Figure 3: Christopher Greenwood, Map of County of Leicestershire, 1825-26<sup>1</sup>

<sup>1</sup> Reproduced with the permission of the National Library of Scotland

### *Post medieval*

- 2.8. The open fields of Witherley were enclosed prior to the 1848 tithe map, and agricultural activity continued to be important to the village in the post medieval period. This is demonstrated by the 1841 census which records 'agricultural labourer' as the most prevalent occupation for the village's inhabitants at that time.
- 2.9. The site lay within an area recorded on the tithe map as 'Hall Orchard, house, garden, cottage and out offices, pasture'. The tithe map and first edition Ordnance Survey show the house now called The Old Rectory as Witherley Hall, and the property now known as Witherley Hall on the site of a property called The Rectory, which was occupied by the Rector, The Reverend James Coral Roberts. The tithe map lists the landowner of the site as John Baker and the occupier as Captain John Thomas, indicating that there was no association between the site and The Rectory (now Witherley Hall) at that time.

Figure 4: Tithe map, Township of Witherley, 1848

- 2.10. A newspaper article from 1805 records that a Rev. J Roberts was instituted to Witherley in October 1805. His death was announced on the 15<sup>th</sup> January 1842. The 1841 census records James Roberts as the Rector. James C Roberts is subsequently recorded as the Rector, indicating that the living passed from father to son. At some point, towards the end of the 19<sup>th</sup> century, The Hall was rebuilt as The Rectory, and the grounds subdivided to create a formal garden and paddock. At the same time Witherley Hall was renamed as such, with the occupant of The Hall recorded in the 1891 census as Henry Chamberlayne, and the Rector of Witherley was by then the Rev. Stephen T Taswell.
- 2.11. The site appears to have been used as a paddock throughout the 19<sup>th</sup> and 20<sup>th</sup> century. A recent planning application was submitted by the Witherley Parochial Church Council proposing the

change of use of part of the field to a cemetery, including an associated car park. That permission has not been implemented.

## Historic map regression

- 2.12. The historic map sequence shows the site as a field between The Hall and St Peter's Church. The field boundaries were created, to the north after the reorganisation of the park and garden of The Hall (now The Old Rectory) between 1848 and 1889. Number 3 Church Road, to the south of the site, is a large modern dwelling, built on the site of cottages shown throughout the historic map sequence.

Figure 9: 1965  
Ordnance Survey,  
1:10,560

## Aerial photographs

2.13. Aerial photographs show the site in use as a paddock, throughout the 20<sup>th</sup> century.

Figure 10: Aerial photograph mosaic, 1950, reproduced with the permission of the National Library of Scotland

Figure 11: GoogleEarth image 2025

---

## Lidar

- 2.14. Lidar images show an area of truncation at the site entrance to Church Road. This data does not indicate any earthworks of archaeological interest within the site. Ridge and furrow is evident on Lidar data in the Memorial Playing Fields, a field to the north of Witherley Hall and in fields to the west of the River Anker, but not within the site.

Figure 12: Environment Agency Lidar (Hillshade) data 2025

## Previous archaeological events

- 2.15. Within the 1km search area, Warwickshire HER record 91 events and 23 events are recorded by Leicestershire HER. Of particular relevance is Event reference ELE11543 which partially overlaps with the site. This relates to a programme of trenched evaluation, undertaken in 2021, on land that is to the south of the site, but partially overlaps with it. The work was undertaken in relation to an application for the change of use of part of the field to a cemetery. Three trenches were excavated. In Trench 1, which was nearest to Church Road, a ditch and three post holes were identified, Roman pottery provided dating evidence to indicate that these were Roman features. Trench 2 contained two shallow linear features, one of which produced a single sherd of medieval pottery. Trench 3 had a substantial ditch and modern land drain. The ditch was dated to the medieval period. A deposit of redeposited clay was also noted, across the survey area. The features identified by this field work are recorded in the HER (assets A79 and A106).

---

## Historic landscape character

2.16. The historic landscape character of the site is recorded by the Leicestershire HER as HLE6016, fields and enclosed land, other small rectilinear fields. The land was enclosed, initially as pasture that was associated with the gardens and house at what is now The Old Rectory (then The Hall). The land was subsequently divided from the gardens of The Old Rectory and used as a paddock. This is a relatively modern field pattern. The site does not appear to have been within the open fields of Witherley, as no ridge and furrow is evident. It was likely to have been within the area of the village crofts (small paddocks and gardens).

## Site visit

2.17. The site comprises a small grass field. Perimeter planting includes mature trees. These mature trees prevent intervisibility between the site and Witherley Hall and The Old Rectory. Views to the south include the spire of St Peters Church, although the large modern property at 3 Church Road lies between the site and the church, preventing clear intervisibility at ground level.

Photograph 1: Looking north towards The Old Rectory and Witherley Hall

Photograph 2: Looking west towards the River Anker

Photograph 3: Looking south east towards Church Road

Photograph 4: Looking south towards St Peter's Church

### 3 Built heritage assets

- 3.1. There are two grade II listed buildings (The Blue Lion Inn and Memorial at the Church of St Peter, one grade I listed building (the Church of St Peter) and one conservation area (Witherley Conservation Area) within the 250m study area. These are included in a gazetteer (Appendix A) and shown on Figure 13, also in Appendix A.

#### *Witherley Conservation Area*

- 3.2. **CA1**, Witherley Conservation Area: The conservation area appraisal shows the site as within an area of key open space, this is described in the appraisal as follows: "Key private green spaces are the grounds of the Rectory, the adjacent paddock and Witherley Hall all of which have been carefully landscaped and fall gently towards the river." The site was recorded by the tithe apportionment as pasture, associated with the orchard and gardens of what was then The Hall (now The Old Rectory). The site was subsequently used as a paddock. It does not have a strong rural character, but neither is it carefully landscaped. The character of the site is predominantly that of a domestic paddock, surrounded by a mix of modern and historic buildings within the village. Mature trees along the perimeter of the site coincide with boundaries created in the mid to late 19<sup>th</sup> century (with the exception of the modern boundaries to 3 Church Road). There are some trees that are characteristic of designed landscapes, particularly the pine trees outside of the site, to the south, but largely the boundaries are formed by mature native trees and hedgerow species. This is in contrast to the more formal planting surrounding The Old Rectory and Witherley Hall. The site is not within any of the important views annotated in the conservation area appraisal.
- 3.3. The verdant character provided by the glimpsed views from Church Road into the site and mature hedge and trees that surround it make a positive contribution to appreciating the heritage value of the conservation area. This relates to the contribution made to appreciating this as historic paddock associated with The Old Rectory and the more open character of the built form on the west side of Church Road. The field does not include any ridge and furrow earthworks that would identify it as part of the former open fields that surround the village and convey its links to agricultural, nor does it include features that convey the formal and designed landscapes of The Old Rectory or Witherley Hall. The site makes a limited positive contribution to the character and appearance of the conservation area, while the site entrance from Church Road has a modern metal fence that detracts from the heritage value of the conservation area and is a negative feature in terms of its character and appearance.

#### *Listed buildings*

- 3.4. **LB1**, Grade I Listed Church of St Peter: The parish church lies to the south of the site. The church dates to the 14<sup>th</sup> century originally, with later alterations. It has very high historic, architectural and archaeological interest, and is an asset of very high value. The church has a tall spire giving it a degree of visual prominence, particularly in views from Riverside. The church is not visually

prominent in views along Church Road, given the built form and mature trees along this road. The setting of the church comprises the churchyard and burial ground in which it is experienced, approaches and the village streetscape at the southern end of Church Road and the views north from Riverside. The site itself is separated from the church by the large modern property at 3 Church Road, which is set back from Church Road, and the mature trees that surround the churchyard and site. This prevents intervisibility between the two at ground level. The site therefore makes a neutral contribution to appreciating the heritage value of the church.

- 3.5. **LB2**, Grade II listed memorial within the churchyard: The asset has high historic and architectural interest and is of high value. The asset's setting is the churchyard, the site is not within the setting of this asset.
- 3.6. **LB3**, Grade II Listed The Blue Lion Inn: The building is opposite the site, on the east side of Church Road. The listing describes it as a house, now public house of late 18<sup>th</sup> century date. The house is recorded by the tithe apportionment as The Blue Lion Inn, owned by the Rev. James Coral Roberts and occupied by Robert Thurlow. The building has high historic and architectural interest, and is an asset of high value. The setting of the building is the streetscape in which it is experienced (both the frontage to Post Office Lane and Church Road). This includes the mature trees and hedgerow that bound the site along Church Road. The site otherwise has no connection with the building and there is no intervisibility between the site and the building. The site therefore makes a neutral contribution to appreciating the heritage value of The Blue Lion Inn.

### *Non-designated heritage assets*

- 3.7. The Old Rectory, Witherley Hall and numbers 2, 4 and 5 Church Road are included as buildings of local interest in the draft (non-adopted) Neighbourhood Plan documents on the parish council website. These properties are 18<sup>th</sup> – 19<sup>th</sup> century buildings that convey the later post medieval development of Witherley and make a positive contribution to the character and appearance of the conservation area. They could be considered non-designated heritage assets (although none are recorded by the HER for Leicestershire) and they have historic and architectural interest at a local level and are therefore of low value.
- 3.8. The settings of The Old Rectory and Witherley Hall are well defined by the grounds in which each stands, and associated outbuildings and boundary walls. Numbers 2, 4 and 5 Church Road have a shared setting of the streetscape in which they are experienced, which also includes The Blue Lion Inn and Church of St Peter. The boundary of the site to Church Road is also part of this setting. However, as above there is no intervisibility from within the site and these properties and no evidential or functional association. The site was separated from the gardens of The Old Rectory in the mid to late 19<sup>th</sup> century and following this The Old Rectory was rebuilt or significantly altered and extended and renamed from The Hall to The Rectory, also with changes in ownership. The site is not within the settings of these assets.

---

## Statement of significance

- 3.9. The site is within the Witherley Conservation Area. The following assessment is made with reference to the checklist in Table 1 of Historic England Guidance Conservation Area Appraisal, Designation and Management, Historic England Advice Note 1 (2nd Edition), 2019 'Criteria to identify buildings that contribute positively to the conservation area'.
- 3.10. The site makes a positive contribution to the conservation area and is within an area marked as key private green space in the conservation area appraisal. However, the site lacks either a strong rural character or any landscaping or designed character and its positive contribution rests largely in the mature planting surrounding the site and along its boundary with Church Road. The current gate is modern and utilitarian and a detracting element on Church Road .

<b>Architectural and artistic interest:</b>	The boundary trees and hedgerows make a positive contribution to appreciating the more open built grain of the western side of Church Road, which is characterised by the larger property of The Old Rectory and detached property at 5 Church Road.	<b>Low</b>
---	--	------------

<b>Historic interest:</b>	The site lacks any strong agricultural character and was not incorporated into the formal gardens of The Old Rectory, having been separated from the area of the landscaped grounds and gardens associated with that non-designated property. It lacks any formal design and its character is that of a modern domestic paddock.	<b>Low</b>
---------------------------	--	------------

### *Settings of listed buildings*

- 3.11. The site is not within the setting of any listed building, other than the boundary of the site along Church Road which is visible in views from and including the Church of St Peter (grade I listed) and The Blue Lion Inn (grade II listed).

### *Historic landscape character*

- 3.12. The historic landscape character of the site is relatively modern and lacks any significant heritage interest.

## 4 Archaeological assets

- 4.1. A search of the Leicestershire and Warwickshire Historic Environment Records identified 146 non-designated assets within a 1km study area. These are included in a gazetteer (Appendix A) and shown on Figure 13, also in Appendix A.
- 4.2. There are also two designated heritage assets with archaeological interest within the 1km study area: Roman Camp at Mancetter (SM1) and Manduessedum Roman villa and settlement (SM2). A number of the assets listed below lie within the two scheduled areas.
- 4.3. In summary the recorded assets comprise:
  - **SM1 and SM2:** Roman Camp, a vexillation fortress at Mancetter, a rectangular enclosure with rounded corners established originally as a temporary fort during the initial Roman military campaign in England in the 1<sup>st</sup> century AD. The Roman camp lies at Mancetter, on both sides of Mancetter Road and to the west of the River Anker. The Manduessedum Roman villa and settlement with associated industrial complex lies on either side of the A5 Watling Street, on the east side of the River Anker between Mancetter and Witherley. The large area of the monument includes evidence for a villa complex, pottery site, defended Burgus and settlement as well as the Watling Street Roman road. These are assets of very high value, relating to their archaeological interest. The setting of the assets includes significant modern built form makes a neutral contribution to the heritage value of the assets. The site is not within this setting, being separated from the scheduled monuments by modern development and mature trees and lacking any intervisibility with it.
  - **Assets A1 – A10:** Prehistoric finds from Mancetter and Witherley, including Neolithic stone flint tools and flint scatters, loom weights and coins. This indicates prehistoric settlement within the wider area, particularly potentially of Iron Age date. These assets have archaeological interest and negligible to low heritage value.
  - **Assets A11 – A79:** Roman activity in Mancetter and Witherley including the defences, finds and burials associated with the Roman villa, settlement and for at Mancetter and Manduessedum and the Witherley villa site to the north of the village. These assets have archaeological interest and low to high heritage value.
  - **Asset A80 – A82:** A cruciform brooch and burials of 5<sup>th</sup> – 6<sup>th</sup> century date found in Mancetter and evidence of 11<sup>th</sup> to 13<sup>th</sup> century occupation in Mancetter. These assets have archaeological interest and low to high heritage value.
  - **Assets A83 – A105:** Evidence for medieval settlement at Mancetter and Witherley, including areas of ridge and furrow between the settlements. These assets have archaeological interest and low to high heritage value.

- **Assets A106 – A134:** Buildings (extant and demolished) and other features associated with the post medieval villages at Witherley and Mancetter. Also the London to Holyhead Road turnpike, the A5. These assets have archaeological and architectural interest and low heritage value.
- **Asset A135:** The War Memorial at St Peters Church, Witherley. This asset has historic and architectural interest and low heritage value.

4.4. Of the above, Assets A79, A105, A106 and A126 are within, partially within, or include the proposed development site:

- **Asset A79:** Roman remains north of 5 Church Road, Witherley. This relates to the 2021 evaluation trench where a ditch and post holes of Roman date were found on land immediately adjacent and partially overlapping with the site at its southern boundary. This asset has archaeological interest and low heritage value.
- **Asset A105:** The medieval and post medieval settlement core of Witherley, a large area that includes the development site.
- **Asset A106:** Evidence for medieval activity (a large ditch interpreted as a possible boundary) found during the trenched evaluation in 2021 on land partially overlapping with the site. These assets have archaeological interest and low heritage value.
- **Asset A126:** Post medieval finds (a silver filigree biconvex button (16<sup>th</sup> century) and mid 19<sup>th</sup> century silver shoe buckle) found by metal detecting in c.2009 on land to the north of St Peter's Church.

### *Archaeological potential and statement of significance*

4.5. The proximity of the site to Mancetter and Manduessedum Roman fort, villa, settlement and pottery industry complex indicate high potential for Roman archaeology to be present, and a ditch and post holes dated to the Roman period were identified in a trench excavated within an area to the immediate south of and partially overlapping with the site. The site is also within the historic settlement core of Witherley, an area of occupation from the medieval period on. Again, trenched evaluation identified a ditch of medieval date within the area to the south of the site.

<b>Archaeological interest:</b>	Documentary evidence referenced above indicates a high potential for Roman archaeology relating most likely to field systems in the hinterland beyond the Roman settlement at Mancetter and Manduessedum. During the medieval period the site lies within the core of the historic settlement, although it appears that this relates primarily to the frontage onto Church Road, recent evaluation did not find any settlement activity and a large ditch was interpreted as a drainage or boundary feature. This indicates that any surviving evidence most likely relates to features that hold locally significant archaeological and historic interest.	<b>Moderate</b>
---------------------------------	---	-----------------

---

## 5 Assessment and conclusions

### Characteristics of the proposed development

- 5.1. The proposed development comprises the construction of a single dwelling. This has the potential to affect the character and appearance of Witherley Conservation Area and also archaeological evidence associated with the non-designated Witherley Historic Settlement Core, as well as the potential for Roman archaeology given the site's proximity to Mancetter and Manduessedum.
- 5.2. Given the intervening mature trees and built form, the site is not within the setting of any heritage asset insofar as that setting makes a positive contribution to appreciating the asset's heritage value.
- 5.3. The design has developed through several iterations, which have been informed by the historic environment assessment. Visualisations (CGI images included in the application pack) demonstrate that the proposed building would sit back in the plot, respecting the topography of the site and with landscaping and the retention of the existing trees which filters views from Church Road and retains the character of the conservation area. The design also reflects the character of properties on this side of Church Road, which are generally larger, detached dwellings. The design of the gate is set back which is consistent with the entrances to No. 3 Church Road and The Old Rectory, reflecting the character of this part of the conservation area.

### Impacts assessment

#### *Witherley Conservation Area*

- 5.4. The construction of a single dwelling provides opportunities to retain, manage and enhance the hedgerow and trees that bound the site and improve the access gate to Church Road. Also to retain a significant area of green space that would be sensitively landscaped and therefore maintained more in keeping with the character described positively in the conservation area appraisal as key private green space (noted as contributing to the conservation area "due to having been carefully landscaped", which is not currently the case).
- 5.5. There is already modern built form between Church Road and the River Anker, and the proposed dwelling would therefore also be consistent with the grain of built form in this part of the conservation area, continuing the extent of the village to the west along the line created by 3 Church Road and the tennis courts to The Old Rectory. The proposed dwelling would largely be screened in views from Church Road by mature trees and hedgerow and would not affect any key views within the conservation area or important buildings within it.
- 5.6. The proposed dwelling is consistent with the management objectives set out in the conservation area appraisal, using materials found elsewhere in the conservation area and respecting the building hierarchy with the nearby Witherley Hall and The Old Rectory while also reflecting the character of this part of Church Road.

- 
- 5.7. On balance a **neutral effect** is predicted, taking into account the loss of some key open space that makes a positive contribution to the conservation area, but also the opportunity to enhance the character of the conservation area through the retention and enhancement of the boundary treatments and careful landscaping.

### *Archaeological interest*

- 5.8. The site has potential for archaeology of Roman, medieval and post medieval date due to the proximity to Roman Mancetter and Manduessedum and its position within the historic core of Witherley. Previous archaeological work within the area to the south of the site and partially overlapping with the site's southern boundary found evidence for a Roman ditch and post holes and medieval ditch, sealed beneath a layer of redeposited clay. The ditch containing Roman material does not appear to continue towards the site but bent towards Church Road. The medieval ditch could continue towards the site. This was interpreted as a possible boundary or drainage feature.
- 5.9. The find of post medieval material within the site is not of any particular significance although it is noted that metal detecting survey did not identify any earlier evidence than post medieval.
- 5.10. The known and potential archaeological interest of the site indicates that remains of low heritage value could be present within the site. The impact of a single dwelling on this (and the non-designated heritage asset 'historic core of Witherley') would be moderate resulting in an effect of **minor adverse** significance before mitigation.

### **Mitigation**

- 5.11. It would be proportionate to the level of effect and archaeological potential of this site that a programme of archaeological evaluation and mitigation could be set out in a written scheme of investigation and secured as a condition of any forthcoming planning consent. This is consistent with the NPPF at paragraphs 216 and 218.
- 5.12. No mitigation is proposed in relation to the conservation area beyond that included in the design of the proposed dwelling and associated landscaping.

### **Consultation**

- 5.13. The above conclusions are subject to consultation with the Leicestershire Planning Archaeologist. The programme of work would be set out in a project design (written scheme of investigation) for agreement with the Planning Archaeologist.

## Appendix A: Gazetteer of known heritage assets

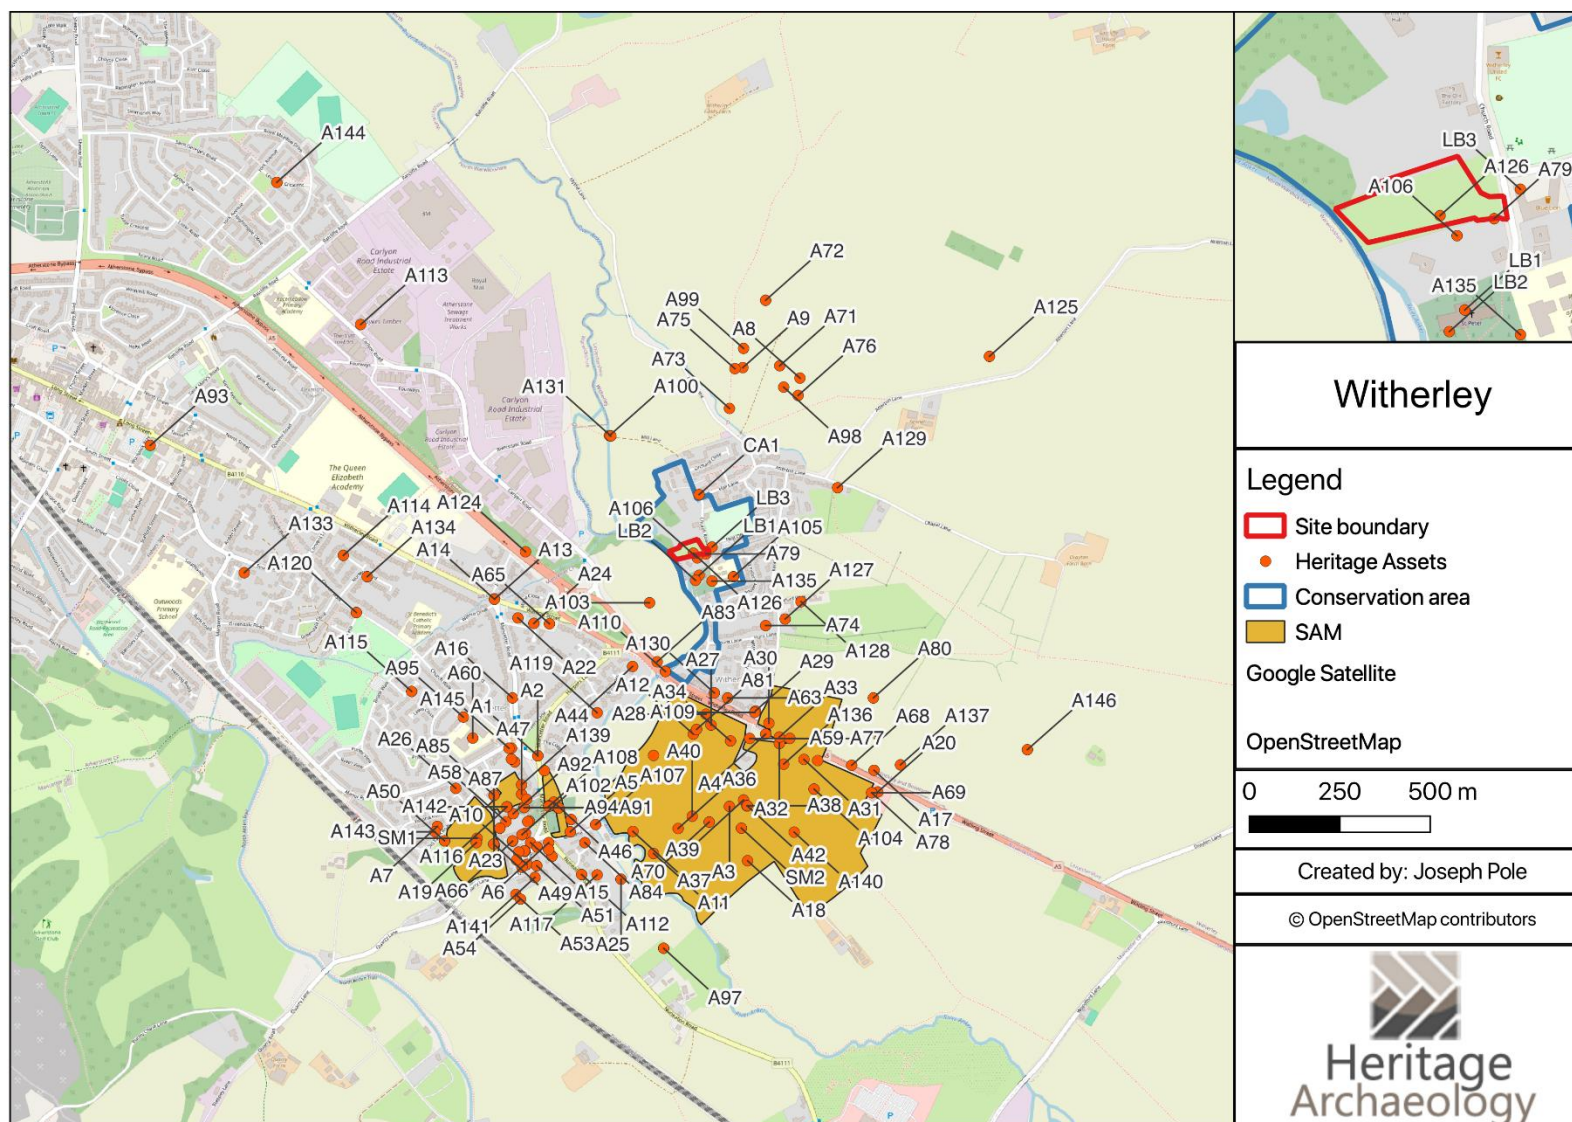

Figure 13: Locations of heritage assets

Asset ID	Status	Source ID	Name	Description	Period	Easting	Northing
SM1	SM	1005736	Roman camp	Roman vexillation fortresses are rectangular enclosures with rounded corners which were occupied on a temporary basis by a campaigning army of between 2500 to 4000 men comprised of varying proportions of legionary and auxiliary troops. They were constructed as part of Roman military strategy immediately after the conquest in AD 43, when the army had not yet established the boundaries of its occupation, and continued to be involved in campaigns to increase and establish its control. All sites were probably abandoned by about AD 90. Vexillation fortresses are defined by a single rampart of earth or turf, usually revetted at the front and rear with turf or timber and surrounded by one or more outer ditches. Originally a breastwork and a wall-walk of timber would have crowned the rampart, possibly with corner and interval towers. Only 14 examples of vexillation fortresses have been recorded in England. As one of a small group of Roman military monuments which are important in representing army strategy, vexillation fortresses are of particular significance to our understanding of the period and all examples with surviving archaeological potential are considered to be of importance. Despite development, the presence of a grave yard, roads and other buildings much is already known through partial excavation about the parts of a series of Roman vexillation fortresses surrounding Mancetter Farm and they will retain further archaeological and environmental evidence relating to their layout, construction, longevity, military, political, strategic and social significance as well as the chronological interrelationships, adaptive re-use and overall landscape context.	Roman	431902	296612
SM2	SM	1017585	Manduessedum Roman villa and settlement with associated industrial complex	Romano-British villas were extensive rural estates at the focus of which were groups of domestic, agricultural and occasionally industrial buildings. The term "villa" is now commonly used to describe either the estate or the buildings themselves. The buildings usually include a well-appointed dwelling house, the design of which varies considerably according to the needs, taste and prosperity of the occupier. Most of the houses were partly or wholly stone-built, many with a timber-framed superstructure on masonry footings. Roofs were generally tiled and the house could feature tiled or mosaic floors, underfloor heating, wall plaster, glazed windows and cellars. Many had integral or separate suites of heated baths. The house was usually accompanied by a range of buildings providing accommodation for farm labourers, workshops	Roman	432633	296640

Asset ID	Status	Source ID	Name	Description	Period	Easting	Northing
				<p>and storage for agricultural produce. These were arranged around or alongside a courtyard and were surrounded by a complex of paddocks, pens, yards and features such as vegetable plots, granaries, threshing floors, wells and hearths, all approached by tracks leading from the surrounding fields. Villa buildings were constructed throughout the period of Roman occupation, from the first to the fourth centuries AD. They are usually complex structures occupied over several hundred years and continually remodelled to fit changing circumstances. They could serve a wide variety of uses alongside agricultural activities, including administrative, recreational and craft functions, and this is reflected in the considerable diversity in their plan. The least elaborate villas served as simple farmhouses whilst, for the most complex, the term "palace" is not inappropriate. Villa owners tended to be drawn from a limited elite section of Romano-British society. Although some villas belonged to immigrant Roman officials or entrepreneurs, the majority seem to have been in the hands of wealthy natives with a more-or-less Romanised lifestyle, and some were built directly on the sites of Iron Age farmsteads. Roman villa buildings are widespread, with between 400 and 1000 examples recorded nationally. The majority of these are classified as 'minor' villas to distinguish them from 'major' villas. The latter were a very small group of extremely substantial and opulent villas built by the very wealthiest members of Romano-British society. Minor villas are found throughout lowland Britain and occasionally beyond. Roman villas provide a valuable index of the rate, extent and degree to which native British society became Romanised, as well as indicating the sources of inspiration behind changes of taste and custom. In addition, they serve to illustrate the agrarian and economic history of the Roman province, allowing comparisons over wide areas both within and beyond Britain. As a very diverse and often long-lived type of monument, a significant proportion of the known population are identified as nationally important.</p> <p>Manduesedum is particularly important because of the survival of a large number of Roman features within the landscape. These include a villa, a defended settlement, an industrial complex, a number of Roman roads, a port or ferry settlement, early field systems and human burials. It is unusual in that the majority of the settlement remains and landscape features have survived from the Roman period without suffering large scale disruption by later development. In addition</p>			

Asset ID	Status	Source ID	Name	Description	Period	Easting	Northing
				<p>archaeological fieldwork indicates that each of the settlement and industrial areas had a long period of development. As a result the Roman landscape at Mancetter will provide insights into some of the more scarce, and less well recognised, elements of the Roman occupation of Britain. It will also afford a long term view of the processes of social and economic development throughout the whole of the Roman period. The settlement will preserve evidence of the daily lives of the craftsmen and townspeople, and of their relationships with those who occupied the villa and the fort.</p> <p>The survival of the villa will afford an opportunity to examine the relationship between agricultural production, industry and the market functions of the town, and provide evidence about the lifestyles of people of a higher status. The survival of many stamped pieces of pottery from the industrial complex has allowed the identification of individual potters, and has provided an insight into the activities of craftsmen, as well as the distribution mechanisms of the industry. The survival of the kilns, drying sheds, other timber structures and wells and water channels used in processing, as well as large quantities of pottery provide an important insight into a specialised regional industry organised on a large scale. The monument therefore affords an opportunity to study both the relationships between settlement, agriculture, industry and communications, and the development of these relationships throughout the Roman and immediate post- Roman period. Of particular interest is the survival of a broad range of settlement types, which will provide information about social relationships between people of different status and occupation. In addition, part excavation has shown that both structural and organic deposits survive which will include contemporary information about the environment, and technological and economic development within the region.</p>			
LB1	LB I	1188486	CHURCH OF ST PETER	<p>GV I Parish Church. Early C14, with a C15 west tower and a chancel of 1858 by Robert Jennings of Atherstone. Coursed and squared freestone, ashlar north aisle and tower and random rubble chancel; plain tile roofs with stone coped verges. West tower, 4-bay nave with north aisle and south porch, 3-bay chancel. The 3 stage west tower has a moulded plinth, offset belfry stage and a crenellated parapet with moulded coping stones to merlons and crenels, and external panelling of trefoiled arches with sunken spandrels; immediately below the parapet</p>	Medieval	432516	297339

LB3	LB II	1361314	THE BLUE LION INN	House now public house. Late C18. Red brick with plain tile roof and brick end stacks. 2 storeys. Regular 3-window front: 16-pane glazing bar sashes with rusticated wedge-shaped lintels with raised key blocks. Central 6-panelled door within a pilastered and pedimented surround containing fanlight with radiating glazing bars. C19 single-storey, 2-bay extension to left with glazing bar sashes. Further C19 extensions to rear. Interior remodelled in the 1980's.	Post medieval	432552	297417
CA1	CA	DLE564	Witherley Conservation Area	Watery Witherley would be a very good description of this picturesque village which lies in the south west corner of the Borough. Improvements to the flow of the river Anker which divides the village from Warwickshire to the northwest have reduced the impact of flooding from the spectacular events of earlier years. For at least 500 years the tall spire of the present 14th century St Peter's Church has been a landmark in the countryside around. Following its destruction by lightening in 1924 it was rebuilt to a lower height but is still nearly 48 metres high. The famous Atherstone Hunt has its stables and kennels at Witherley. Constructed in 1835, it was the subject of a book by Seigfried Sassoon, "The Memoirs of a Foxhunting Man". Before the Second World War, the village was almost self sufficient and included a smithy, bakery, slaughterhouse, mill, post office and a shop. However since the 1960's, the settlement has seen major new development. Village farms have disappeared, traditional cottages have been demolished, or modernised and only pockets of the traditional character of the village remain.	Medieval - modern	432516	297562

A31	NDHA	MWA8116	RB Road found at Manduessedum	The remains of a Roman road were recorded at 450m south east of Witherley Bridge.	Romano-British	432806	296830
A32	NDHA	MWA6247	Romano-British Occupation Activity at Manduessedum	The site of a buildings and other features dating to the Roman period. The site was located 400m south east of Witherley Bridge, Mancetter.	Romano-British	432738	296874
A33	NDHA	MWA6248	Excavation of Watling Street	The site of a section of the Roman road known as Watling Street which was excavated. The site is situated 400m south east of Witherley Bridge, Mancetter.	Romano-British	432738	296892
A34	NDHA	MWA395	Roman Road running from Witherley Road, Mancetter	A Roman Road is visible as a crop mark on aerial photographs. Its existence was proved during excavations. It is situated 50m south of Witherley Road.	Romano-British	432603	296881
A35	NDHA	MWA6249	Excavations of RB Buildings at Manduessedum	The remains of buildings dating to the Roman period in the town of Manduessedum were excavated. The site is located 500m south east of Witherley Bridge, Mancetter.	Romano-British	432844	296827
A36	NDHA	MWA396	Poss Crop Mark Enclosures 400m NW of Crab Tree Farm, Mancetter.	Linear features, which may be Roman in date, are visible as crop marks on aerial photographs. Their function is not known but they lie 450m north west of Crab Tree Farm.	Romano-British	432458	296639
A37	NDHA	MWA8037	Cropmarks East of Mancetter Mill	An enclosure, with some internal features, is visible as a crop mark on aerial photographs. Excavation has dated it to the Roman period. It lies 450m south of Witherley Bridge.	Romano-British	432333	296631
A38	NDHA	MWA387	Pottery manufacturing site known as Broadclose or Broad Close Field, Mancetter	The site of several pottery kilns dating to the Roman period. The site lies 220m south-west of the Bull Inn, Mancetter.	Romano-British	432649	296702
A39	NDHA	MWA6241	Excavation of Roman Drying Shed at Mancetter	The site of a drying shed associated with pottery production. The building was excavated and was found to date to the Roman period. It was situated 450m north west of Crab Tree Farm, Mancetter.	Romano-British	432639	296718
A40	NDHA	MWA6242	Roman road Running E-W between River Anker and Watling Street at Manduessedum	Several roads were excavated and were found to date to the Roman period. They were situated 450m north-west of Crab Tree Farm, Mancetter.	Romano-British	432497	296673
A41	NDHA	MWA6243	Excavation of Roman Industrial Features	The site of an industrial area which was used for pottery production. Excavations revealed the remains of buildings, pits and a well. The features were Roman in date and were situated 450m north west of Crab Tree Farm, Mancetter.	Romano-British	432648	296702
A42	NDHA	MWA6244	Excavation of Roman Glass Furnace at Mancetter	The site of a glass works dating to the Roman period. The site was situated 450m north west of Crab Tree Farm, Mancetter.	Romano-British	432649	296702

Asset ID	Status	Source ID	Name	Description	Period	Easting	Northing
A43	NDHA	MWA8036	Romano-British cremation found South of Manduessedum	A Roman cremation burial was excavated 450m south east of Witherley Bridge.	Romano-British	432649	296702
A44	NDHA	MWA386	Excavation revealing part of Watling Street	Excavation revealing part of Watling Street.	Romano-British	432332	297087
A45	NDHA	MWA397	Roman Fort Ditch, Mancetter.	The site of a part of the defensive ditch of the Roman fort at Mancetter. The site lies 30m east of Mancetter Road, Mancetter.	Romano-British	432125	296697
A46	NDHA	MWA3850	Section of Defensive Roman Ditch, Roman Fort, Mancetter	Part of the defensive ditch of the Roman fort at Mancetter was excavated. It was situated 25m east of Mancetter Road, Mancetter.	Romano-British	432114	296712
A47	NDHA	MWA8032	Romano-British ditch N of St.Peter's Church Mancetter	A ditch dating to the 1st century AD was identified during archaeological investigations.	Romano-British	432025	296734
A48	NDHA	MWA8031	Possible RB Ditch at Gramer's Almshouses	A Roman ditch was recorded during an excavation. It was situated 50m west of Mancetter Road, Mancetter.	Romano-British	432046	296660
A49	NDHA	MWA3853	Excavation of Romano-British Buildings to West of Manor House	A Roman building and granary were excavated 100m north of Quarry Lane, Mancetter.	Romano-British	431948	296596
A50	NDHA	MWA3499	Roman fortress defensive ditches 100m west of Mancetter Farm, Mancetter.	Outer two Roman fortress defensive ditches 100m west of Mancetter Farm, Mancetter.	Romano-British	431812	296605
A51	NDHA	MWA3852	Excavation of Romano-British Features at Mancetter Vicarage	A ditch dating to the Roman period. It is situated inside the area of the Roman fort, 20m east of Quarry Lane. Features excavated inside the area of the ditch provide evidence for Roman occupation of the area.	Romano-British	432067	296536
A52	NDHA	MWA7341	RB Feature at Manor View, Quarry Lane	A layer of clay that may be a surface that was laid down during the Roman period. The site is situated east of Quarry Lane, Mancetter.	Romano-British	432068	296588
A53	NDHA	MWA7960	Roman Features at Mancetter Vexillation Fortress	Excavations revealed the remains of a Roman fort and associated buildings. The fort is situated 300m north-east of Bardon Manor Farm.	Romano-British	432009	296457
A54	NDHA	MWA7468	Geophysical Survey at Mancetter (Area D)	A linear feature, possibly the remains of a section of the Roman defences at Mancetter, was found when a geophysical survey was carried out.	Romano-British	432022	296444
A55	NDHA	MWA3496	Excavation of Romano-British features at Manor Farm House	Excavations took place within the Roman Fort at Mancetter. Post holes were recorded suggesting that buildings had stood at this site. Various finds were recovered including pottery and coins. The site was located west of Quarry Lane, Mancetter.	Romano-British	432034	296577

A56	NDHA	MWA3498	Excavation of Romano-British Features at Mancetter Farm	Excavation within the Mancetter Fort revealed the remains of a Roman ditch and buildings that may have been Roman barracks. The site was situated west of Quarry Lane, Mancetter.	Romano-British	432026	296532
A57	NDHA	MWA4632	Roman Features , Nuneaton Road, Mancetter	A defensive ditch and features that suggest buildings stood on this site in the Roman period, and were recorded during an excavation. The site lies 50m west of Quarry Lane, Mancetter.	Romano-British	432100	296581
A58	NDHA	MWA7968	Romano-British and Medieval Features at Gramer House	An excavation revealed the remains of a pit, gully and a ditch which all dated to the Roman period. They were situated 150m east of Farm Road, Mancetter. Further fieldwork on the site located more Romano-British pits and gullies, potentially related to	Romano-British	431982	296658
A59	NDHA	MWA3854	Defences of Manduessedum	The site of the defences of the Roman fort at Mancetter, which were partially excavated in 1927, 1954-56.	Romano-British	432656	296888
A60	NDHA	MWA13493	Possible vicus or annexe, north of Mancetter Roman Fort	A series of V-shaped ditches were recorded during archaeological work to the immediate north of the Roman fort at Mancetter. It is possible that these represent the periphery of the Roman vicus, or civilian settlement attached to the fort at Mancetter. A	Romano-British	431890	296889
A61	NDHA	MWA8267	Roman forts at Mancetter	The site of several successive Roman forts at Mancetter. The forts were all built on the same site but on different alignments and were situated 500m east of Rose Hill Farm.	Romano-British	431965	296640
A62	NDHA	MWA8034	Roman Buildings and Industrial Site at Mill Lane, Mancetter	The site of a series of timber buildings, and an industrial site, with ovens, pits and wells was recorded during excavations at the site of the Scout Hut, Mill Lane, Mancetter. Further observation on the site recorded two ditches dating to the Roman peri	Romano-British	432162	296664
A63	NDHA	MWA19273	Roman occupation evidence, Witherley Lodge, Mancetter	Occupation evidence spanning the 1st-4th century was recorded in excavations to the north of Watling Street.	Romano-British	432595	297000
A64	NDHA	MWA30162	Roman features at 78 Mancetter Road, Mancetter	A Roman pit and three undated features were identified at 78 Mancetter Road during investigations. The undated features are all thought to be of a Roman date.	Romano-British	432006	296823
A65	NDHA	MWA30394	Romano-British activity near Watling Street, Mancetter	Roman boundary or enclosure ditches, extraction and rubbish pits, a possible roadside ditch and a possible building were identified in 2013.	Romano-British	432102	297205
A66	NDHA	MWA32400	Roman Occupation Evidence, Manor Farm Lawn, Mancetter, Warwickshire	Roman Military Occupation evidence was identified during archaeological investigations in 1976.	Romano-British	432000	296604

Asset ID	Status	Source ID	Name	Description	Period	Easting	Northing
A67	NDHA	MWA3851	Excavation of Romano-British Features, Gramer Almshouses	Several pits dating to the Roman period were excavated. They were located inside the area of the Roman Fort, 25m east of Mancetter Road, Mancetter.	Romano-British	432100	296702
A68	NDHA	MWA33818	Possible site of Boudicca's final battle, A5, Mancetter	This is a possible site of the battle in which Boudicca was defeated by the Roman army in 61 AD. The exact location of the battlefield is unknown; other locations that have been given include Clifton upon Dunsmore and Towcester.	Romano-British	432938	296814
A69	NDHA	MWA34031	Manduessedum Roman Town	Manduessedum Roman villa and settlement with associated industrial complex	Romano-British	432994	296738
A70	NDHA	MWA34032	Roman ditch, Broadclose, Mancetter	A ditch dating from the mid-first century. Predating the Roman pottery industry identified at this site.	Romano-British	432544	296657
A71	NDHA	MLE21019	Roman burial from the area of Witherley villa	Following its discovery the burial was excavated by Archaeology Warwickshire. It appears to be that of a wealthy child. Several Roman nails were recovered, demonstrating that the lead was the inner lining of a wooden box that has rotted away. The lead coffin lining was made from two individual sheets of lead; the inner side of the coffin has inscribed lines or pattern marks and the method of construction conforms to a known type. The sides were welded using molten lead and the lid was folded over the edges. Inside the coffin two jet or shale bangles/bracelets were found, suggesting that the child was female. The bangles and the lead coffin appear to show that this was a wealthy late Roman burial. The only skeletal remains were a handful of bone fragments	Romano-British	432739	297918
A72	NDHA	MLE21022	Roman silver hair pin from north of Witherley villa	An early Roman silver hair pin was found here c.2008 via metal detecting. The finial is in the form of a finely modelled extended right hand holding a possible perfume flask.	Romano-British	432700	298099
A73	NDHA	MLE23002	Roman finger ring found north of Witherley	A fragment of a Roman silver finger ring was found during metal detecting in c.2014	Romano-British	432600	297800
A74	NDHA	MLE23092	Roman finger ring from west of Kennel Lane, Witherley	Roman silver finger-ring of wound-wire type. Metal detected find from c.2009.	Romano-British	432700	297200
A75	NDHA	MLE18535	Roman find scatter, west of Roman villa, Witherley	A large Roman scatter of 246 sherds was found adjacent to the villa (39NW AE). The date range of the sherds covers the whole Roman period, mainly locally produced Mancetter-Hartshill wares, though some imports such as amphora and Nene Valley mortaria were included. Roman building materials were also found include flue tile, imbrex, tegula and wall and floor tile. The fieldwalking was carried out by the Shepshed Fieldwork Group on 20/10/2002	Roman	432615	297910

A76	NDHA	MLE9736	Roman villa north of Witherley	Fieldwalking and metal detecting in 2002-2013 have recorded a large amount of Roman building materials, pottery (including some imported wares) and metal finds such as coins and brooches. The finds suggest a villa with mosaics and a heating system.	Roman	432790	297836
A77	NDHA	MLE19039	Roman 'Burgus' at Mancetter, Witherley	The remains of the defended settlement known as the 'Burgus', consist of an embanked rectangular enclosure, and an associated ribbon development lying along both sides of Watling Street. The earthworks consist of two large ditches and a bank, measuring approximately 220m by 160m, aligned north west to south east along the route of Watling Street which passes through its centre, and are of the late third century. Limited excavation has suggested that the embankment was preceded by first century defences and has shown that occupation in the area ranged from the first to the fourth century. In the gardens of the modern houses on the north side of Watling Street, which are not included in the scheduling, excavation revealed additional structures believed to be part of the ribbon settlement including evidence of shops, houses, and a medical surgery	Roman	432767	296888
A78	NDHA	MLE3302	Manduessedum Roman Town, Witherley	Manduessedum is a large Roman settlement complex, but it is mainly in Warwickshire - only the N fringes are in Leics. A fort lay under Mancetter village and the town may well have grown up as a vicus - it was extensive by 60AD. There is a large area of pottery production, especially mortaria at Mancetter and at nearby Hartshill. In the late C3rd/early C4th the irregular street network was replaced and a defended rectangular enclosure of 2.1ha was placed on Watling Street (replacing a late C1st enclosure), probably a burgus. Its ditch was filled by industrial waste by the mid C4th	Roman	432993	296738
A79	NDHA	MLE26466	Roman remains north of 5, Church Road, Witherley	Trial trenching in 2021 recorded a north/south ditch and three adjacent post-holes. Two sherds of Samian pottery were recovered.	Roman	432535	297398
