### Comments Details

The Air Quality Assessment assesses the impact of the construction phase on existing receptors and recommends mitigation which is satisfactory and should form the basis of the Air Quality section of a Construction Environmental Management Plan.

Comments: The report states that "A detailed operational road traffic impact assessment will be undertaken and pollutant concentrations will be predicted across the Site to determine the suitability of the Site for its proposed use with regards to the current relevant air quality objectives".

The above Air Quality Assessment should be submitted prior to determination.

I will provide full comment and recommendations once the above has been submitted.

---

Kind regards
