

Good morning Sophie

I assumed maybe the topography report and felling of trees was sufficient, so my apologies, it will be the complete removal of said trees including the stumps which will be stump ground professionally once trees are felled, as mentioned 3 conifer trees and 1 apple tree. The remaining trees are under the permitted 75mm so no permission required. Along with the removal of an overgrown privet which now encroaches the main road due to its density this is to be replaced with new grown laurels as described. The conifers are not deemed protected nor is the apple tree from previous conversations with yourselves and all conifers are dead internally which means we are unable to manicure the trees for aesthetic reasons to enhance the appearance to the area, the previous owner died and maintenance of the grounds was not kept by the living descendants prior to our purchase. If you require any further information then please advise me of what is required by yourself to validate the planning,

Kind regards

Ian Mustard
