V1.1	12/05/2025	Planning	ESG	JH	PJB

Contents

List of Appendices

1.0 Introduction

1.1 Tier Consult have been appointed by Barberry Bardon Ltd, to prepare a drainage strategy proposal for the proposed development off Station Road, Battram, Leicestershire.

1.2 The report aims to provide an outline of the proposed drainage strategy, taking account of the requirements of the National Planning Policy Framework (NPPF) and associated Planning Practice Guidance.

2.0 Site Description and Development Proposal

2.1 The site is located adjacent off Station Road, Battram, Leicestershire. LE67 1HT. The approximate National Grid Reference for the centre of the site is SK438098 with coordinates Easting: 443814, Northing: 309801 at postcode LE67 1HT

2.2 The proposed development is 12.50Ha with a max impermeable area of 11.6Ha

2.3 A topographic survey (Appendix A) has been undertaken by Blue Earth Construction, indicates that the site predominantly falls from south to north with site levels varying from circa 162.6m to 150.3m AOD.

2.4 The soilscapes mapping details the site conditions to be Mudstone and siltstone, red-brown and greenish grey, with beds of indurated, variably dolomitic siltstone and very fine-grained sandstone common in the lower half; finely disseminated gypsum common in upper half. British Geological Survey Map indicates that the geological sequence below the site comprises mudstone of siltstone.

3.0 Existing Drainage

3.1 The development land is greenfield located southwest of Bardon Hill Industrial Estate. There are no public sewers within the site boundary.

3.2 Severn Trent Water have provided public sewer records in response to the pre-planning sewerage enquiry (Appendix B).

4.0 Surface Water Drainage

4.1 Requirement H3 of the Building Regulations 2010 and the NPPF, as suggested by Leicestershire County Council LLFA, prescribe a hierarchal approach to surface water discharge. Consideration should firstly be given to discharge to soakaway, infiltration system and watercourse in that priority order before discharge to a sewer/ formal drainage system is considered.

The government guidance to local authorities includes a hierarchy of connection, which can be summarised as follows:
a) surface water runoff is collected for use.
b) discharge into the ground via infiltration.
c) discharge to a watercourse or other surface water body.
d) discharge to a surface water sewer, highway drain or other drainage system, discharging to a watercourse or other surface water body.

e) discharge to a combined sewer.

4.2 **Infiltration/Soakaways**

4.2.1 The ground infiltration testing has not been carried out on the site at this stage, however from the desktop study reviewing the BGS and soilscapes mapping the ground conditions defined do not suggest that infiltration is achievable.

4.3 **Discharges to Watercourse**

4.3.1 There is a watercourse to the south of the development and an existing pond to the east of the site.

5.0 **Proposed Surface Water Drainage Strategy**

5.1 Following the planning guidance, the existing area of 12.5 Ha has been used to calculate the greenfield run-off rate as 54.9l/s.

5.2 As there is an existing pond to the east of the development, the proposed drainage strategy is discharge into an existing surface water network that discharges to the pond.

5.3 The storm water drainage system is to be designed in accordance with the requirements of the NPPF and associated Planning Practice Guidance to ensure that flood risk is not increased, either on or off site, for all storm events up to and including the 1 in 100 year +40% climate change events.

5.4 The strategy is to restrict the surface water discharge rate to 54.9 l/s. This is to ensure that the discharge rate at the outfall location remains the same as the greenfield run off rate of the site.

5.5 Surface water runoff from roofs, private drives and any adoptable highways, will drain via a piped network to an attenuation facility which will provide attenuation storage for all flows up to and including the 1 in 100-year event plus 40% for climatic change. Refer to appendix C.

5.6 SuDS features, such as permeable paving and attenuation ponds, will be incorporated into the surface water drainage proposals to aid in the mitigation requirements for water quality prior to discharging to the wider natural surface water drainage network.

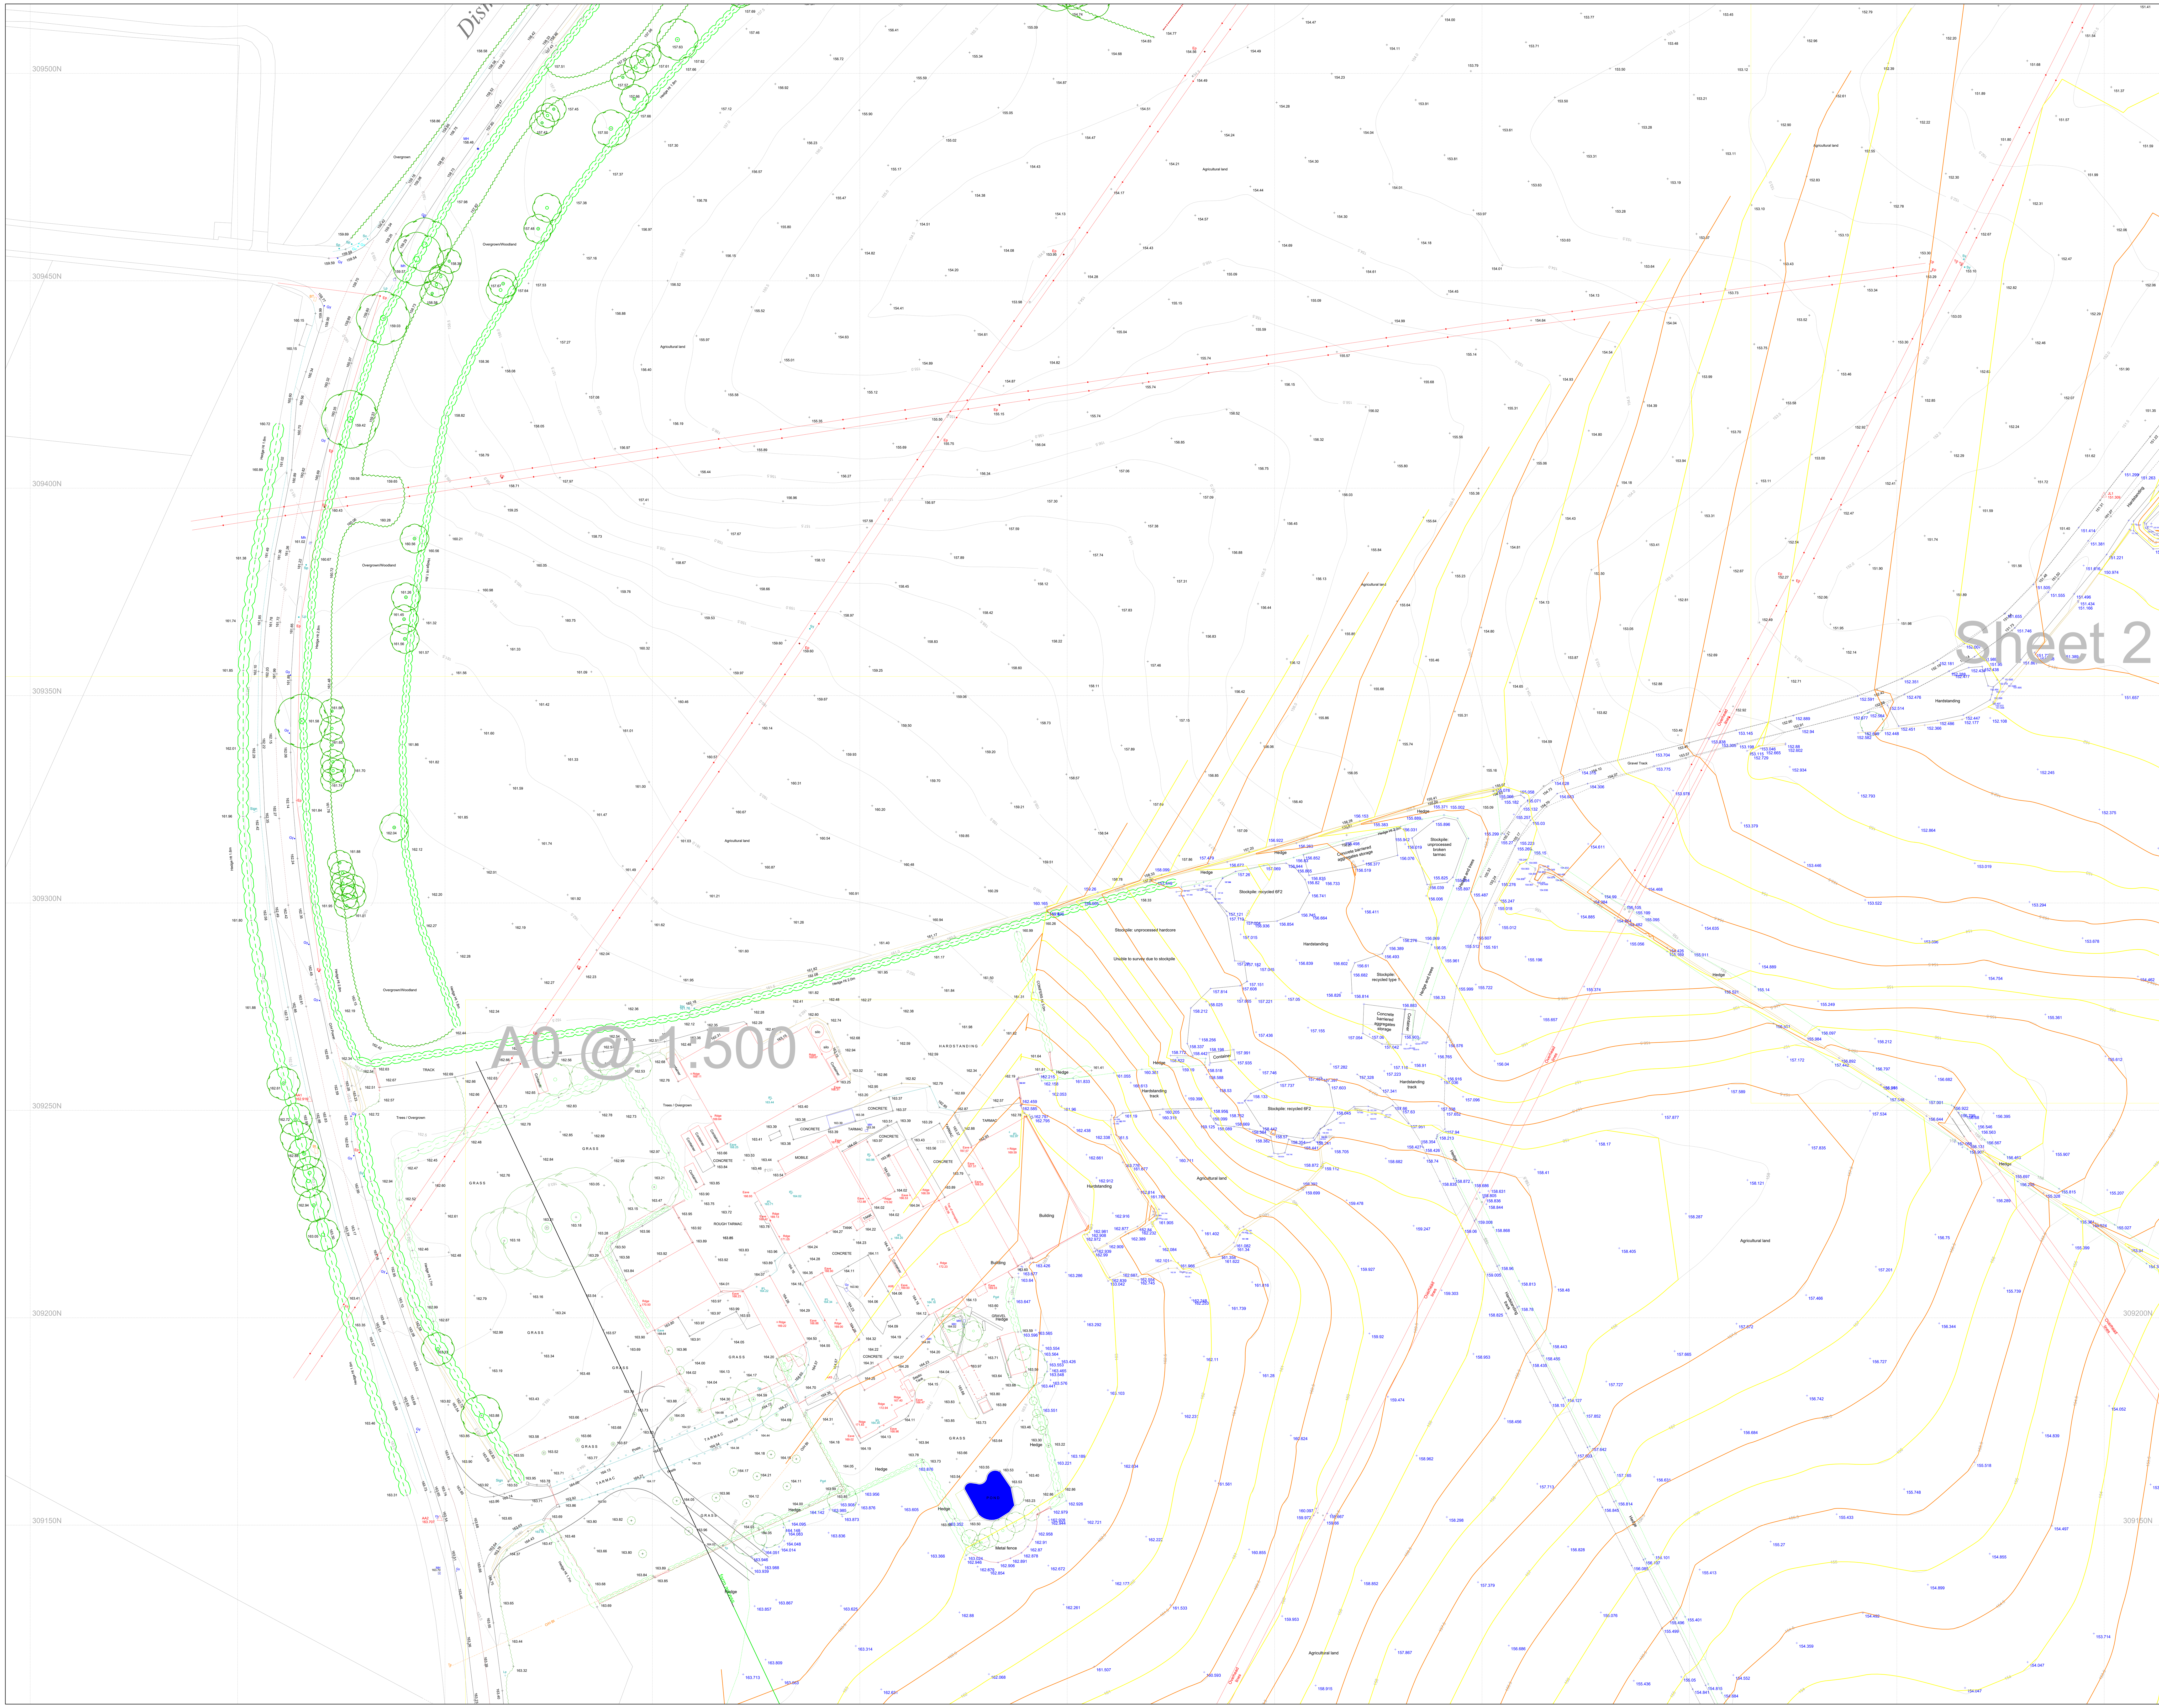
5.7 In addition to the SuDS features mentioned above, the proposals also include a petrol/ oil interceptor with an enhanced silt retention providing greater pollution mitigation indices.

6.0 Proposed Foul Drainage Strategy

6.1 The proposed foul drainage system will convey foul flows via a piped network and discharge into a proposed private pumping station. Foul water will be pumped to Station Road and connect to the Severn Trent adopted network.

Proposed drainage layout is pertained in Appendix C.

Appendix A
Topographic Survey



BlueEarth Construction Note

This drawing shows the combined topographical survey work of Axis Survey and BlueEarth construction. Axis Survey's survey work was undertaken in September 2022, within approximately the northern half of the plot. BlueEarth Construction's survey work was undertaken in June 2023. At the request of the client, we (BlueEarth Construction) have merged our survey with Axis's survey work.

The drawing title of Axis Survey's original topographic survey was titled "4063".

BlueEarth Constructions survey work has been completed based on the Control Stations listed on Axis Survey's drawing "4063"; specifically a GPS calibration to stations: AA2, AX7, AX6, ST1 and JL3.

The data points and linework of Axis Survey's survey have been mostly unaltered, except where BlueEarth Construction's survey ties into Axis Survey's survey.

Axis Survey Note (from Axis Survey Drawing 4063)

This plan should only be used for its original purpose. Axis Surveys accepts no responsibility for this plan if supplied to any party other than the original client. Do not scale, all dimensions should be checked on site prior to design and construction.

Drainage information (where applicable) has been visually inspected from the surface and therefore no allowance has been made for any sub surface entry into manholes, chambers or voids. Therefore any details relating to depths, sizes, ETC will be approximate only.

The contractor is to check and verify all building and site dimensions, levels and sewer invert levels at connection points before work starts.

Should there be any conflict between the details indicated on this drawing and those indicated on other drawings, the engineer should be informed prior to construction on site.

It is important to note that the same accuracies implied by the plotting scale are equally applicable to digital data supplied for CAD

Every effort if made to identify all visible above ground features, however is it should be borne in mind that there may be items obscured at the time of survey.

Visible features in the vicinity if the boundaries, as shown on this survey may not represent the extent of legally conveyed ownership.

THIS SURVEY HAS BEEN ORIENTATED TO THE ORDNANCE SURVEY (O.S) NATIONAL GRID (OSGB36) VIA A GLOBAL POSITION SYSTEM (GPS) AND THE O.S. ACTIVE NETWORK (OS NET).

A TRUE OSGB36 COORDINATE HAS BEEN ESTABLISHED NEAR TO THE SITE CENTRE VIA A TRANSFORMATION USING THE OSTN02 & OSGM02 TRANSFORMATION MODELS. THE SURVEY HAS BEEN CORRELATED TO THIS POINT AND A FURTHER ONE OR MORE OSGB36 POINTS ESTABLISHED TO CREATE A TRUE O.S. BEARING FOR ANGLE ORIENTATION.

Scale	**Revision**	**Sheet**
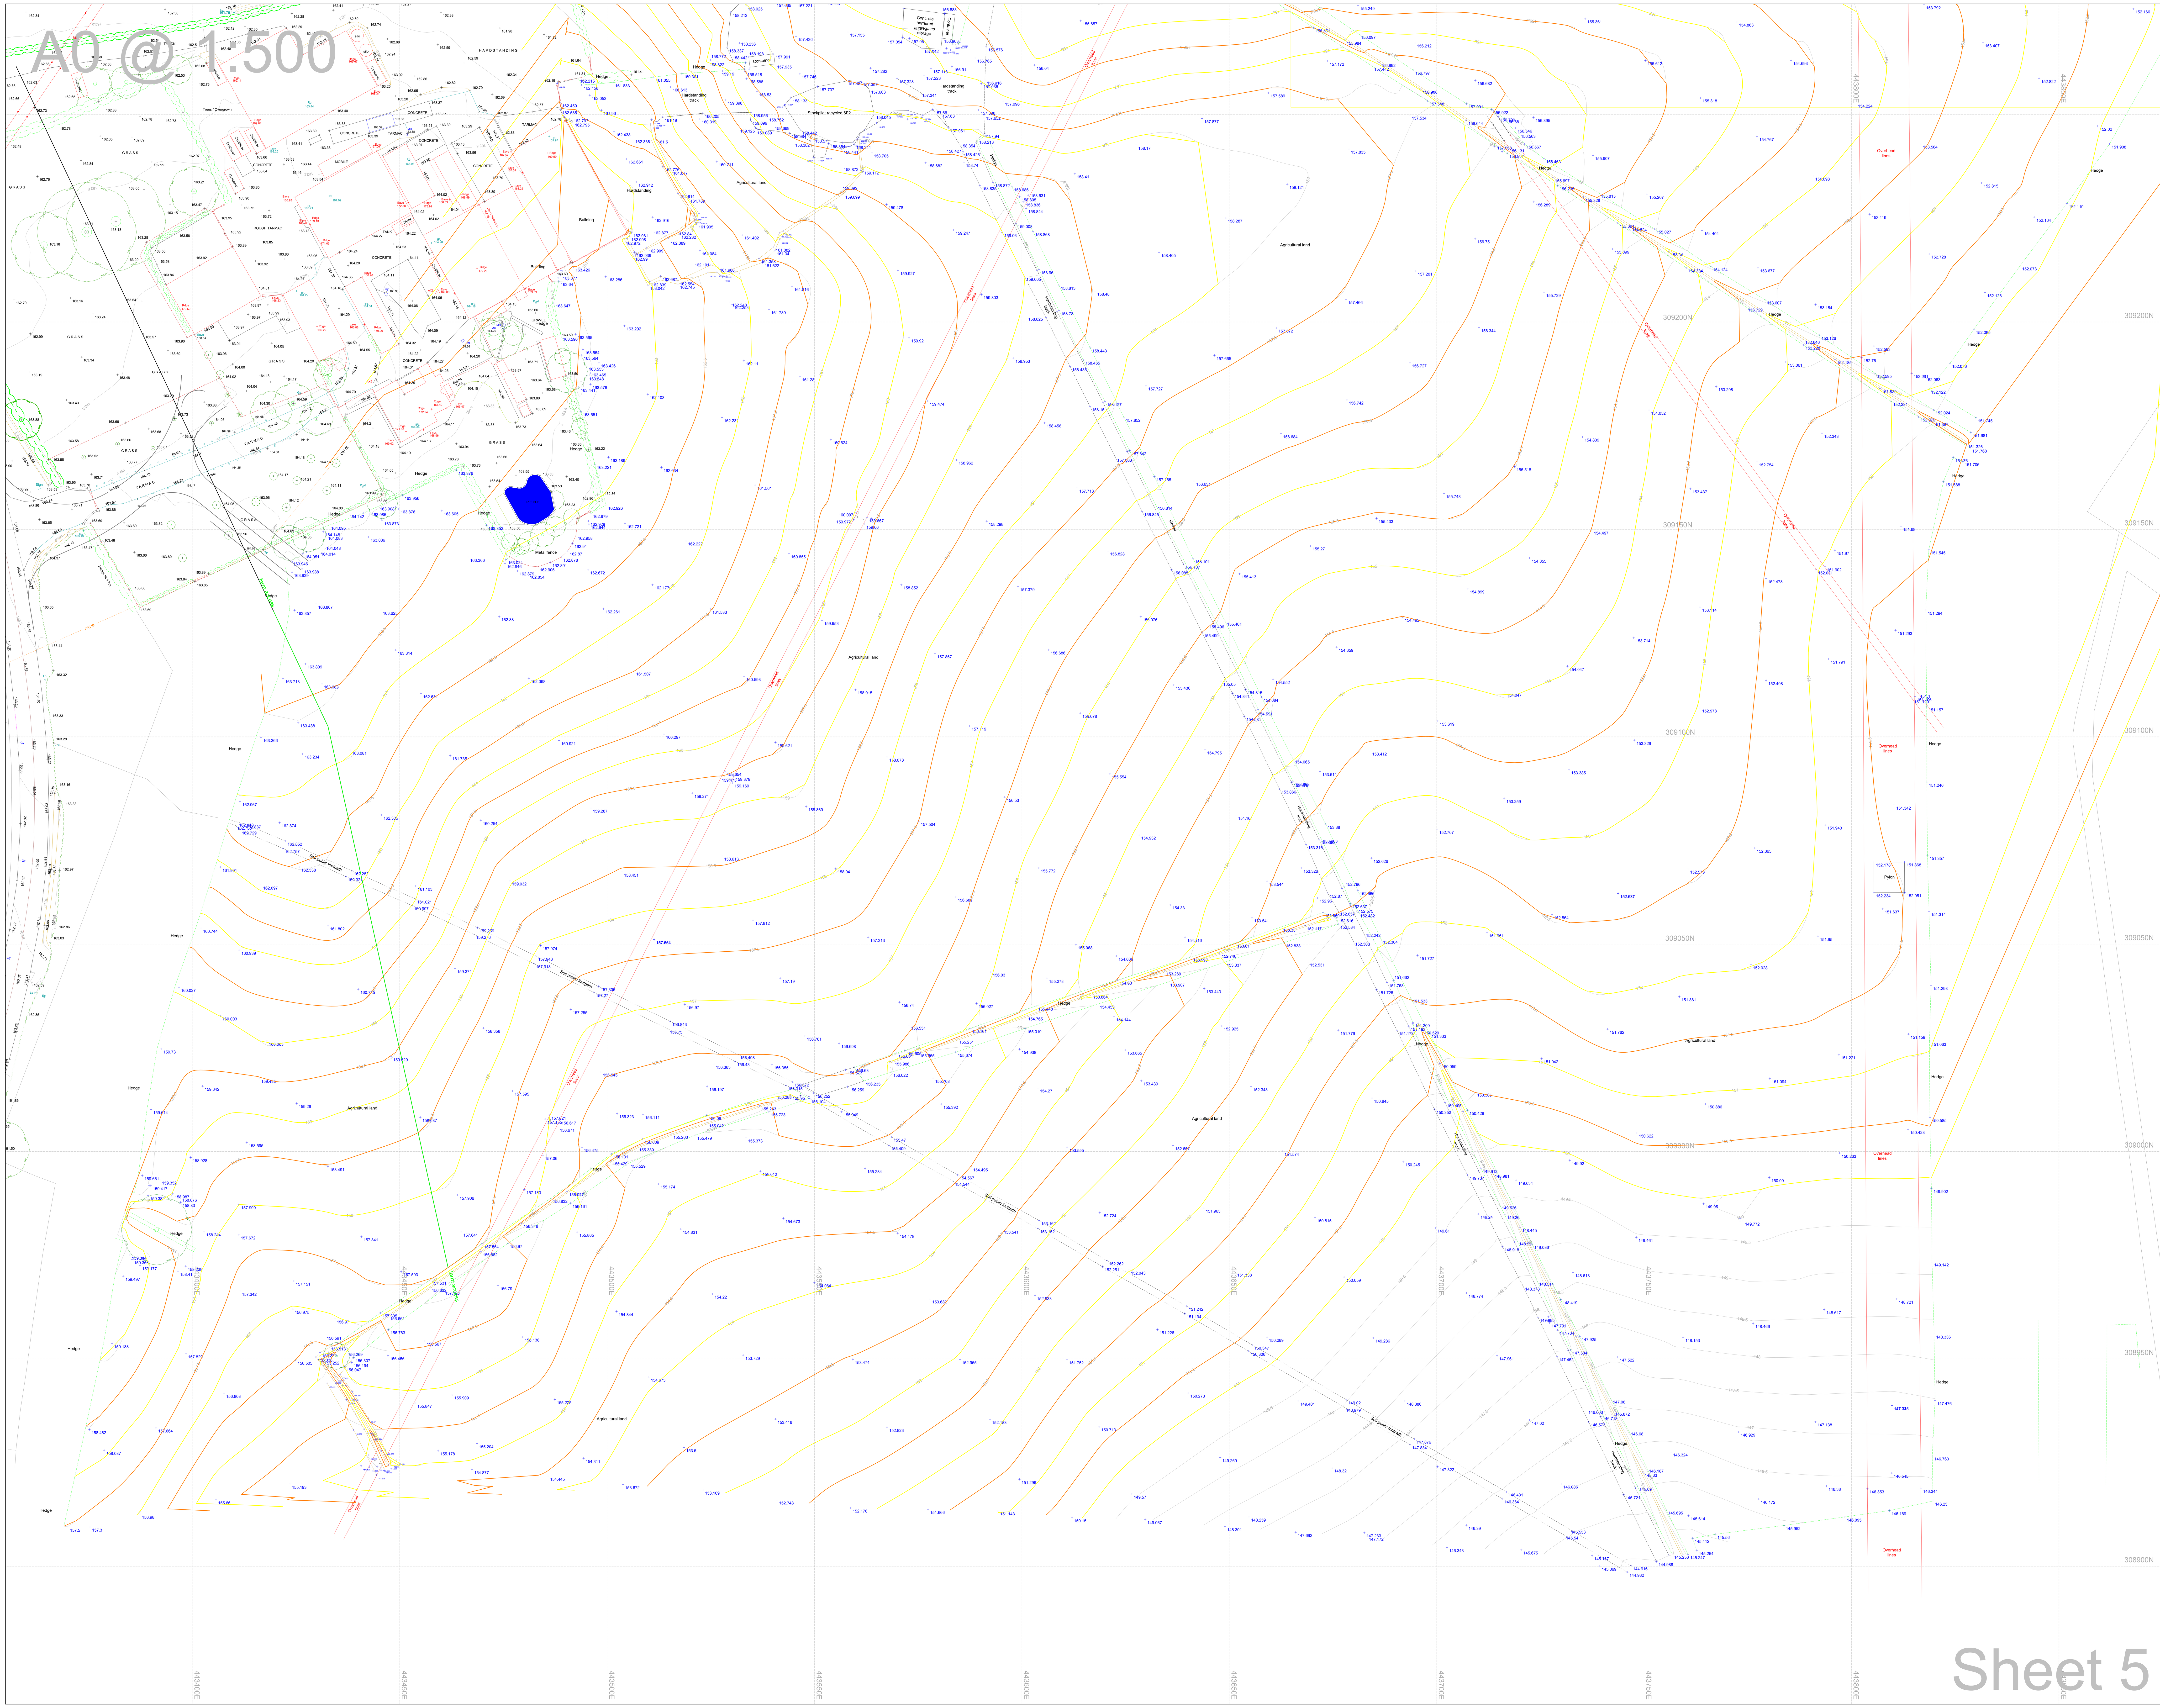
1:500 at A0	0	4/5



BlueEarth Construction Note

This drawing shows the combined topographical survey work of Axis Survey and BlueEarth construction. Axis Survey's survey work was undertaken in September 2022, within approximately the northern half of the plot. BlueEarth Construction's survey work was undertaken in June 2023. At the request of the client, we (BlueEarth Construction) have merged our survey with Axis's survey work.

The drawing title of Axis Survey's original topographic survey was titled "4063".

BlueEarth Constructions survey work has been completed based on the Control Stations listed on Axis Survey's drawing "4063"; specifically a GPS calibration to stations: AA2, AX7, AX6, ST1 and JL3.

The data points and linework of Axis Survey's survey have been mostly unaltered, except where BlueEarth Construction's survey ties into Axis Survey's survey.

Axis Survey Note (from Axis Survey Drawing 4063)

This plan should only be used for its original purpose. Axis Surveys accepts no responsibility for this plan if supplied to any party other than the original client. Do not scale, all dimensions should be checked on site prior to design and construction.

Drainage information (where applicable) has been visually inspected from the surface and therefore no allowance has been made for any sub surface entry into manholes, chambers or voids. Therefore any details relating to depths, sizes, ETC will be approximate only.

The contractor is to check and verify all building and site dimensions, levels and sewer invert levels at connection points before work starts.

Should there be any conflict between the details indicated on this drawing and those indicated on other drawings, the engineer should be informed prior to construction on site.

It is important to note that the same accuracies implied by the plotting scale are equally applicable to digital data supplied for CAD

Every effort if made to identify all visible above ground features, however is it should be borne in mind that there may be items obscured at the time of survey.

Visible features in the vicinity if the boundaries, as shown on this survey may not represent the extent of legally conveyed ownership.

THIS SURVEY HAS BEEN ORIENTATED TO THE ORDNANCE SURVEY (O.S) NATIONAL GRID (OSGB36) VIA A GLOBAL POSITION SYSTEM (GPS) AND THE O.S. ACTIVE NETWORK (OS NET).

A TRUE OSGB36 COORDINATE HAS BEEN ESTABLISHED NEAR TO THE SITE CENTRE VIA A TRANSFORMATION USING THE OSTN02 & OSGM02 TRANSFORMATION MODELS. THE SURVEY HAS BEEN CORRELATED TO THIS POINT AND A FURTHER ONE OR MORE OSGB36 POINTS ESTABLISHED TO CREATE A TRUE O.S. BEARING FOR ANGLE ORIENTATION.

Our ref: 1106607

Dear Sir/Madam,

Proposed Development: (1 industrial unit – 3l/s) Wood Road, Coalville, LE67 1GA, 443548, 309455

I refer to your 'Development Enquiry Request' in respect of the above named site. Please find enclosed the sewer records that are included in the fee together with the Supplementary Guidance Notes (SGN) which refer to surface water disposal from development sites.

Protective Strip

No public sewers within site boundary.

Due to a change in legislation on 1 October 2011 there may be former private sewers on the site which have transferred to the responsibility of Severn Trent Water Ltd, which are not shown on the statutory sewer records, but are located in your client's land. These sewers would require protective strips of 3 metres either side of the sewer's centreline that we will not allow to be built over. If such sewers are identified to be present on the site, please contact us for further guidance.

Please note: there is no guarantee that you will be able to build over or close to any Severn Trent sewers, and where a diversion is required there is no guarantee that you will be able to undertake those works on a self-lay basis. Every approach to build near to or divert our assets has to be assessed on its own merit and the decision of what is or isn't permissible is taken based on the risk to the asset and the wider catchment it serves. It is vital therefore that you contact us at the earliest opportunity to discuss the implications of our assets crossing your site. Failure to do so could significantly

affect the costs and timescales of your project if it transpires diversionary works need to be carried out by Severn Trent.

Foul Water Drainage

After reviewing the proposed options, the 225mm combined sewer, MH SK44091301 along station Road would be the most suitable connection point for your development due it having larger capacity and can be reached via gravity. The network can accommodate flows for 1 industrial unit (2.28 l/s 2dwf). Therefore, a connection is acceptable to the company subject to a S106 submission.

Alternatively, connection to the 150mm combined network along Battram road is also a suitable connection point it can be reached via gravity and is the closest to the site. However, we are unable to confirm if this connection point has enough capacity to handle the flows as a result modelling will need to take place.

In a change to our previous process, we no longer charge developers for the hydraulic modelling service. We will liaise with you over time with regards to the outcome of our investigations and any impact that may have on the planning status, occupation, or phasing of the site. However, while we can provide a brief summary of our findings if you need us to, we will no longer provide the full external capacity assessment report.

From the application you have submitted, I am assuming that the development has not been granted planning approval. Please inform us as and when planning has progressed as this will help determine how quick we carry out the modelling exercise. In the meantime, the site will be added to our modelling tracker and reviewed regularly until the site can be progressed for sewer modelling.

Surface Water Drainage

Under the terms of Section H of the Building Regulations 2000, the disposal of surface water by means of soakaways should be considered as the primary method. If these are found to be unsuitable, satisfactory evidence will need to be submitted. The evidence should be either percolation test results or by the submission of a statement from the SI consultant (extract or a supplementary letter).

Severn Trent Water expects all surface water from the development to be drained in a sustainable way to the nearest watercourse or

land drainage channel, subject to the developer discussing all aspects of the developments surface water drainage with the Local Lead Flood Authority (LLFA). Any discharge rate to a watercourse or drainage ditch will be determined by the LLFA / EA.

Note, STW will have to be satisfied that all sustainable option have been exhausted before allowing discharge to the public network.

Sewer records show a watercourse that runs east of the site. It is advised to pursue a connection to this if feasible, with flow rates to be agreed by the LLFA.

Connections

For any new connections (including the re-use of existing connections) to the public sewerage system, the developer will need to submit a Section 106 application form. Our Developer Services department are responsible for handling all new connections enquiries and applications. To contact them for an application form and associated guidance notes please call 0800 7076600 or download from www.stwater.co.uk.

Please quote the above reference in any future correspondence (including e-mails) with STW Limited. Please note that Developer Enquiry responses are only valid for 6 months from the date of this letter.

Yours sincerely

SEWER RECORD (Tabular)

O/S Map Scale: 1:10,000 **This map is centred upon:**

Date of Issue: 09-02-24 **X:** 444125.52 **Y:** 309355.54

Disclaimer Statement:

1 Do not scale off this Map.

2 This plan and any information supplied with it is furnished as a general guide, is only valid at the date of issue and no warranty as to its correctness is given or implied. In particular this plan and any information shown on it must not be relied upon in the event of any development or works (including but not limited to excavations) in the vicinity of SEVERN TRENT WATER assets or for the purposes of determining the suitability of a point of connection to the sewerage or distribution systems.

3 On 1 October 2011 most private sewers and private lateral drains in Severn Trent Water's sewerage area, which were connected to a public sewer as at 1 July 2011, transferred to the ownership of Severn Trent Water and became public sewers and public lateral drains. A further transfer takes place on 1 October 2012. Private pumping stations, which form part of these sewers or lateral drains, will transfer to ownership of Severn Trent Water on or before 1 October 2016. Severn Trent Water does not possess complete records of these assets. These assets may not be displayed on the map.

SEWER RECORD (Tabular)

O/S Map Scale: 1:200 **This map is centred upon:**

Date of Issue: 09-02-24 **X:** 444148.41 **Y:** 309312.73

Disclaimer Statement:

1 Do not scale off this Map.

2 This plan and any information supplied with it is furnished as a general guide, is only valid at the date of issue and no warranty as to its correctness is given or implied. In particular this plan and any information shown on it must not be relied upon in the event of any development or works (including but not limited to excavations) in the vicinity of SEVERN TRENT WATER assets or for the purposes of determining the suitability of a point of connection to the sewerage or distribution systems.

3 On 1 October 2011 most private sewers and private lateral drains in Severn Trent Water's sewerage area, which were connected to a public sewer as at 1 July 2011, transferred to the ownership of Severn Trent Water and became public sewers and public lateral drains. A further transfer takes place on 1 October 2012. Private pumping stations, which form part of these sewers or lateral drains, will transfer to ownership of Severn Trent Water on or before 1 October 2016. Severn Trent Water does not possess complete records of these assets. These assets may not be displayed on the map.

5 Ordnance Survey licence number: **100031673**

NOTE:
FOUL GULLIES PROVIDED FOR BIN STORE WASH DOWN - GULLY TO BE KESSEL ODOUR STOP TYPE.

FOUL GULLIES TO BE PROVIDED IN BASE OF EACH WEIGHBRIDGE AND CONNECT INTO FUEL/OIL INTERCEPTOR - DETAILS TBC UPON RECEIPT OF WEIGHBRIDGE DETAIL DRAWINGS.

FOUL DRAINAGE PROVIDED ADJACENT TO VEHICLE MAINTENANCE UNIT FOR CONNECTION TO VEHICLE PITS - ALL DETAILS TBC.

FOUL DRAINAGE MAY BE REQUIRED TO BE DEEPER TO ACCEPT DRAINAGE FROM THE WEIGHBRIDGES AND VEHICLE PITS - THIS CAN ONLY BE CONFIRMED UPON RECEIPT OF DETAILED INFORMATION CONFIRMING DEPTHS AND LOCATIONS.

DIT TYPE 3 SUB-BASE TO CENTRAL BAYS OF CARPARK BAYS TO CONTINUE UNDER CENTRAL FOOTWAY.

PROPOSED SPEL VEHICLE WASHCLASS 2 FULL RETENTION PETROL/OIL SEPARATOR MODEL WDS200/2000. ALLOW FOR A 250mm THK GRADE C28/35 CONCRETE BED AND SURROUND ON 450mm THK DIT TYPE 1 SUB-BASE TOGETHER WITH A SOLAR POWERED AUDIBLE AND VISUAL SEPARATOR ALARM MOUNTED WITHIN THE MAINTENANCE BUILDING OR FIXED TO THE YARD SLAB. EXACT LOCATION OF SEPARATOR ALARM AND SEPARATOR VENT PIPE TO BE AGREED. INSTALLATION TO BE IN ACCORDANCE WITH THE MANUFACTURES REQUIREMENTS.
CL 157.823
INLET IL
OUTLET IL

PROPOSED SPEL VEHICLE WASH SILT SEPARATOR MODEL ST800/12. ALLOW FOR A 250mm THK GRADE C28/35 CONCRETE BED AND SURROUND ON 450mm THK DIT TYPE 1 SUB-BASE. INSTALLATION TO BE IN ACCORDANCE WITH THE MANUFACTURES REQUIREMENTS.
CL 157.800

PROPOSED 2.00m DEEP ATTENUATION BASIN TO ACHIEVE A VOLUME OF 357.0m³ REQUIRED TO CATER FOR THE 1 IN 100 YEAR EVENT +40% FOR CLIMATIC CHANGE, SLOPE SIDES TO BE AT A GRADIENT OF 1 IN 3. ATTENUATION BASIN FINISH/VEGETATION TO BE ADVISED BY LANDSCAPER.
Top of Basin = 158.00 Base of Basin = 156.00
Water Level (1 IN 100YR + 40%CC) = Water Level (1 IN 2YR) =

PROPOSED PACKAGE SURFACE WATER PUMPING CHAMBER IN ACCORDANCE WITH BS EN 12050 REQUIRED REQUIRED TO PUMP A PEAK FLOW RATE OF 1L/s ON A DUTY STANDBY ARRANGEMENT. ALLOW FOR A 250mm THICK C28/35 CONCRETE BASE AND SURROUND ON 450mm THICK DIT TYPE 1 SUB-BASE. PUMP STATION TO BE COMPLETE WITH AN INTEGRAL HIGH LEVEL AUDIBLE AND VISUAL ALARM ON THE CONTROL PANEL. INSTALLATION TO BE IN ACCORDANCE WITH THE MANUFACTURES REQUIREMENTS.
CL 154.730
IL TBC BY MANUFACTURER
OUTGOING IL: (OUTGOING PUMP MAIN BY MANUFACTURER)
SUMP IL: (PUMP SUMP BY MANUFACTURER)

Ex. HIGHWAYS DRAIN OUTFALL PIPE DIA AND INVERTS TAKEN FROM TIER ENVIRONMENTAL TRIAL HOLE INVESTIGATIONS.

PROPOSED SPEL PURACEPTOR FULL RETENTION SEPARATOR MODEL P500 1C/SC. ALLOW FOR A 250mm THK GRADE C28/35 CONCRETE BED AND 250mm THK SURROUND ON 450mm THK DIT TYPE 1 SUB-BASE TOGETHER WITH A SOLAR POWERED AUDIBLE AND VISUAL SEPARATOR ALARM SECURED TO A 7505Q x 150mm THK GRADE C28/35 CONCRETE BASE ON 300mm THK DIT TYPE 1 SUB-BASE. EXACT LOCATION OF SEPARATOR ALARM AND SEPARATOR VENT PIPE TO BE AGREED. INSTALLATION TO BE IN ACCORDANCE WITH THE MANUFACTURES REQUIREMENTS.
CL 155.035

NOTE: CELLULAR ATTENUATION SYSTEMS.
ALL CELLULAR ATTENUATION SYSTEMS TO BE FULLY ENCAPSULATED WITH A 1mm THICK IMPERMEABLE MEMBRANE WITH ALL JOINTS TO BE FULLY WELDED. VENT PIPES TO BE LOCATED IN SOFT LANDSCAPED AREAS (EXACT NUMBER TO BE AGREED WITH SYSTEM MANUFACTURER). ACCESS POINTS AND INSTALLATION TO BE IN ACCORDANCE WITH MANUFACTURERS RECOMMENDATIONS.

CELLULAR ATTENUATION SYSTEM 1 TO CATER FOR THE 1 IN 100 YEAR EVENT +40% FOR CLIMATIC CHANGE 1600.0m³ x 0.70m DEEP TO PROVIDE 1064.0m³.
CL 154.988 (Min. - Varies)

Notes

1. THIS DRAWING IS THE COPYRIGHT OF TIER CONSULT GROUP AND CANNOT BE REPRODUCED IN ANY FORM WITHOUT WRITTEN CONSENT FROM THE COMPANY.
2. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELEVANT ARCHITECT'S, ENGINEER'S AND SPECIALIST'S DRAWINGS TOGETHER WITH THE APPROPRIATE SPECIFICATION.
3. ALL DIMENSIONS ARE IN MILLIMETRES UNO. FOR THE PURPOSES OF CONSTRUCTION THIS DRAWING MUST NOT BE SCALED AND ONLY WRITTEN DIMENSIONS USED. IT IS THE CONTRACTORS RESPONSIBILITY TO CHECK ALL DIMENSIONS ON SITE PRIOR TO CONSTRUCTION AND ANY DISCREPANCIES TO BE BROUGHT TO THE IMMEDIATE ATTENTION OF THE ENGINEER IN WRITING.
4. ALL LEVELS ARE IN METRES UNO & TO OS DATUM.
5. THE WORKS SHALL BE IN ACCORDANCE WITH THE NATIONAL BUILDING SPECIFICATION.
6. THE LOCATION LINE & LEVEL OF ALL KNOWN EXISTING DRAINAGE PIPEWORK INDICATED ON THE DRAWINGS ARE APPROXIMATE AND FOR GUIDANCE PURPOSES ONLY.
7. CONNECTION TO THE EXISTING PUBLIC SEWERS WILL BE SUBJECT TO THE RELEVANT APPROVALS FROM THE STATUTORY UNDERTAKER.
8. IT IS THE CONTRACTORS RESPONSIBILITY TO DETERMINE THEIR EXACT LINE AND LEVEL, BY WAY OF HAND EXCAVATED TRIAL PITS, PRIOR TO THE COMMENCEMENT OF ANY EXCAVATION WORKS ON SITE. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS AND MAINTAIN THE STRUCTURAL INTEGRITY OF ALL ABOVE AND BELOW GROUND SERVICE INSTALLATIONS.
9. THE CONTRACTOR SHALL IMPLEMENT AND MAINTAIN THROUGHOUT THE DURATION OF THE CONTRACT A FULL TRAFFIC MANAGEMENT SYSTEM TO ENSURE SAFE PASSAGE OF VEHICLES/PEDESTRIANS IN THE VICINITY OF THE WORKS. ALL TRAFFIC SIGNS, SIGNALS, BARRIERS ETC. SHALL BE IN ACCORDANCE WITH CHAPTER 8 OF THE TRAFFIC SIGNS MANUAL.
10. THE CONTRACTOR SHALL MAKE ADEQUATE PROVISION FOR DEALING WITH AND DISPOSING OF GROUND/SURFACE WATER ENCOUNTERED DURING EXCAVATIONS
11. ALL SOFT / HARD PAVED AREAS AFFECTED BY THE WORKS SHALL BE FULLY REINSTATED FOLLOWING THE INSTALLATION OF ALL DRAINAGE WORKS. ALL SURFACE MARKINGS AFFECTED BY THE WORKS SHALL BE FULLY REINSTATED.
12. ALL SURPLUS EXCAVATED MATERIAL SHALL BE DISPOSED IN A DESIGNATED AREA ON SITE.
13. UPON COMPLETION OF THE WORKS THE CONTRACTOR SHALL PROVIDE AS BUILT SETTING OUT CO-ORDINATE AND LEVEL INFORMATION ALONG WITH A FULL CCTV REPORT AND LAYOUT.
14. PIPEWORK WITH LESS THAN 750mm OF COVER IN TRAFFICKED AREAS TO BE CONCRETE ENCASED. (BEDDING CLASS 2)
15. PIPEWORK WITH MORE THAN 750mm OF COVER TO HAVE CLASS S GRANULAR BED AND SURROUND.
16. POLYPROPYLENE INSPECTION CHAMBERS OF 450Ø +1.2m DEEP TO BE FITTED WITH A REDUCED ACCESS FITTING.
17. SOIL STACKS - WHERE SOIL STACKS SERVE MULTIPLE STOREYS THE STACK REST BEND IS TO BE MINIMUM 750mm BELOW THE LOWEST BRANCH CONNECTION. WHERE SEPARATE STACKS ARE PROVIDED FOR GROUND FLOOR, REST BENDS MAY BE 450mm MINIMUM BELOW THE LOWEST CONNECTION.
18. SVP CONNECTIONS TO BE 100mm DIA UNO.
19. ALL FO AND RWP LOCATIONS TO BE TO BE COMPLETE WITH A LOW LEVEL ACCESS PLATE FOR RODDING.
20. WHERE PROPOSED DRAINAGE PIPEWORK RUNS ARE IN CLOSE PROXIMITY TO THE NEW FOUNDATIONS, THE CONTRACTOR SHALL ALLOW FOR EXTENDING THE DEPTH OF NEW FOUNDATIONS IN LEAN MIX CONCRETE DOWN TO THE PROPOSED PIPE BEDDING LEVEL.
21. THE HYDRAULIC DESIGN HAS BEEN CARRIED OUT IN ACCORDANCE WITH 'CIRIA REPORT C753 THE SuDS MANUAL' AND THE HYDRAULIC DESIGN OF PIPELINES AND OTHER CONDUITS HAS BEEN CARRIED OUT IN ACCORDANCE WITH 'BS EN 16933-2'.
