Condition Sheet: INDIVIDUAL TREES Habitat Type		
Habitat Types		
Individual trees – Urban trees		
Post development target conditions (DRAFT)		
Condition Assessment Criteria		Criterion passed (Yes or No)
A	The tree is a native species (or at least 70% within the block are native species).	TARGET
B	The tree canopy is predominantly continuous, with gaps in canopy cover making up <10% of total area and no individual gap being >5 m wide (individual trees automatically pass this criterion).	TARGET
C	The tree is mature (or more than 50% within the block are mature) ¹ .	
D	There is little or no evidence of an adverse impact on tree health by human activities (such as vandalism, herbicide or detrimental agricultural activity). And there is no current regular pruning regime, so the trees retain >75% of expected canopy for their age range and height.	TARGET
E	Natural ecological niches for vertebrates and invertebrates are present, such as presence of deadwood, cavities, ivy or loose bark.	

F	More than 20% of the tree canopy area is oversailing vegetation beneath.	TARGET
Number of criteria passed		
Condition	Condition Assessment	Score Achieved x/✓
Passes 5 or 6 criteria	Good (3)	
Passes 3 or 4 criteria	Moderate (2)	TARGET

habitat so that it meets all Criteria B, D

Condition Sheet: WOODLAND Habitat Type**UK Habitat Classification (UKHab) Habitat Types****Woodland (other)****Post development target conditions (DRAFT)****Condition Assessment Criteria**

Indicator		Good (3 points)	Moderate (2 points)
A	Age distribution of trees	Three age-classes ¹ present.	Two age-classes ¹ present.
B	Wild, domestic and feral herbivore damage	No significant browsing damage evident in woodland ² .	Evidence of significant browsing pressure is present in less than 40% of whole woodland ² .
C	Invasive plant species	No invasive species ³ present in woodland.	Rhododendron <i>Rhododendron ponticum</i> or cherry laurel <i>Prunus laurocerasus</i> not present, and other invasive species ³ <10% cover.
D	Number of native tree species	Five or more native tree or shrub species ⁴ found across woodland parcel.	Three to four native tree or shrub species ⁴ found across woodland parcel.
E	Cover of native tree and shrub species	>80% of canopy trees and >80% of understory shrubs are native ⁵ .	50 - 80% of canopy trees and 50 - 80% of understory shrubs are native ⁵ .
F	Open space within woodland	10 - 20% of woodland has areas of temporary open space ⁶ . Unless woodland is <10ha, in which case 0 - 20% temporary open space is permitted ⁷ .	21 - 40% of woodland has areas of temporary open space ⁶ .
G	Woodland regeneration	All three classes present in woodland ⁸ ; trees 4 - 7 cm Diameter at Breast Height (DBH), saplings and seedlings or advanced coppice regrowth.	One or two classes only present in woodland ⁸ .

H	Tree health	Tree mortality 10% or less, no pests or diseases and no crown dieback ⁹ .	11% to 25% tree mortality and or crown dieback or low-risk pest or disease present ⁹ .
I	Vegetation and ground flora	Recognisable NVC plant community ¹⁰ at ground layer present, strongly characterised by ancient woodland flora specialists.	Recognisable woodland NVC plant community ¹⁰ at ground layer present.
J	Woodland vertical structure	Three or more storeys across all survey plots, or a complex woodland ¹¹ .	Two storeys across all survey plots ¹¹ .
K	Veteran trees	Two or more veteran trees ¹² per hectare.	One veteran tree ¹² per hectare.
L	Amount of deadwood	50% of all survey plots within the woodland parcel have deadwood, such as standing and fallen deadwood, large dead branches and or stems, branch stubs and stumps, or an abundance of small cavities ¹³ .	Between 25% and 50% of all survey plots within the woodland parcel have deadwood, such as standing and fallen deadwood, large dead branches and or stems, stubs and stumps, or an abundance of small cavities ¹³ .
M	Woodland disturbance	No nutrient enrichment or damaged ground evident ¹⁴ .	Less than 1 hectare in total of nutrient enrichment across woodland area, and or less than 20% of woodland area has damaged ground ¹⁴ .

Condition sheet: HEDGEROW Habitat Types			
Habitat Type			
Native hedgerow			
Post development target conditions (DRAFT)			
Condition Assessment Details			
A series of ten attributes, representing key physical characteristics are used for this assessment			
Hedgerow favourable condition attributes			
Attributes and functional groupings (A, B, C, D and E)		Criteria - the minimum requirements for 'favourable condition'	Criteria description
Core groups - applicable to all hedgerow types			
A1.	Height	>1.5 m average along length	The average height of woody stems from the base of stem to the top of canopy
A2.	Width	>1.5 m average along length	The average width of woody stems at the widest point of the canopy
B1.	Gap - hedge base	Gap between ground and base of canopy <0.5 m for >90% of length	This is the vertical 'gapping' component of the hedgerow from ground to the lowest leaf
B2.	Gap - hedge canopy continuity	Gaps make up <10% of total length; and No canopy gaps >5 m	This is the horizontal 'gapping' component of the hedgerow - breaks in the woody canopy
C1.	Undisturbed ground and perennial vegetation	>1 m width of undisturbed ground with perennial herbaceous vegetation for >90% of length: · Measured from outer edge of hedgerow; and · Is present on one side of the hedgerow (at least).	This is the level of disturbance (disturbance) at the base of the hedgerow Undisturbed ground is present along the hedgerow length, greater than 1m wide and must be present along at least 90% of the length This criterion recognises
C2.	Nutrient-enriched perennial vegetation	Plant species indicative of nutrient enrichment of soils dominate <20% cover of the area of undisturbed ground.	The indicator species used are the legume <i>Galium aparine</i> (cleavers). Their presence, either singly or in combination, must exceed the 20% cover threshold
D1.	Invasive and neophyte species	>90% of the hedgerow and undisturbed ground is free of invasive non-native plant species (including those listed on Schedule 9 of WCA ³) and recently introduced species.	Recently introduced species that have become naturalised in the UK since 1900. Archaeophytes count as native species, as do archaeophytes and neophytes ⁴ , as well as the European species listed in the 'Online Atlas of the British Flora' (an up-to-date list of the species in the British Isles)
D2.	Current damage	>90% of the hedgerow or undisturbed ground is free of damage caused by human activities.	This criterion addresses damage to the hedgerow that have led to or lead to deterioration of the hedgerow This could include evidence of
Additional group - applicable to hedgerows with trees only			

E1.	Tree class	There is more than one age-class (or morphology) of tree present (for example: young, mature, veteran and or ancient ⁸), and there is on average at least one mature, ancient or veteran tree present per 20 - 50m of hedgerow.	This criterion addresses classes or morphologies of trees and provide opp species.
E2.	Tree health	At least 95% of hedgerow trees are in a healthy condition (excluding veteran features valuable for wildlife). There is little or no evidence of an adverse impact on tree health by damage from livestock or wild animals, pests or diseases, or human activity.	This criterion identifies if damage which compromi of the individual specime

The hedgerow condition assessment generates a weighting (score) ranging from 1 - 3

Condition categories for hedgerows without trees

Category	Category Requirements	Metric Score
Good	No more than 2 failures in total; AND No more than 1 failure in any functional group.	3
Moderate	No more than 4 failures in total; AND <u>Does not fail both attributes</u> in more than one functional group (for example, fails attributes A1, A2, B1 and C2 = Moderate condition).	2
Poor	Fails a total of more than 4 attributes; OR <u>Fails both attributes</u> in more than one functional group (for example, fails attributes A1, A2, B1 and B2 = Poor condition).	1

Score achieved:

Condition categories for hedgerows with trees

Category	Category Requirements	Metric score
