PLANTING

The planting zone is to be two metres from the boundary fence and a minimum of 15 metres wide, 8m from centre of hedge on Leicester Road end and 8 metres from corner of fence on southern end, total area is 0.16 ha.

Planting block to be cleared of all debris and long grass prior to planting. Each planting point 300 x 300 to be cleared of surface vegetation (screefed).

The following species are to be planted:

24 No Quercus Robur (Oak); 48 No Fraxinus Excelsior (Ash) 48 No Corylus Avellana (Hazel); 24 No Prunus Spinosa (Blackthorn); 48 No Crataegus Monogyna (Hawthorn); 24 No Acer Campestre (Field Maple); 24 No Alnus Glutinosa (Alder).

All above are to be 40 - 60 cm 1 + 1 transplants of UK provenance (Forestry Commision Zone 402 or 403) to be pit planted at 2 m centres on a staggered grid, in random groups of 9 - 15 number of the same species, each plant fitted with a stake or shrub shelter as appropriate for the species.

70 feathered trees located randomly within the block, 2m minimum height of Field Maple, Alder and Oak are to be planted at 3m centres in groups of 5 of the same species in 600 x 600 x 600mm pits incorporating 80litres of peat free compost, each tree to have a single wooden stake, tree tie and rabbit guard.

MAINTENANCE

A weed free circle of 1 metre to be maintained at all times around the base of each tree or transplant.

Shelters to be checked monthly and any weed or grass growth within shelters to be removed by hand.

Grass to be cut between plants to 100mm maximum in July and September each year.

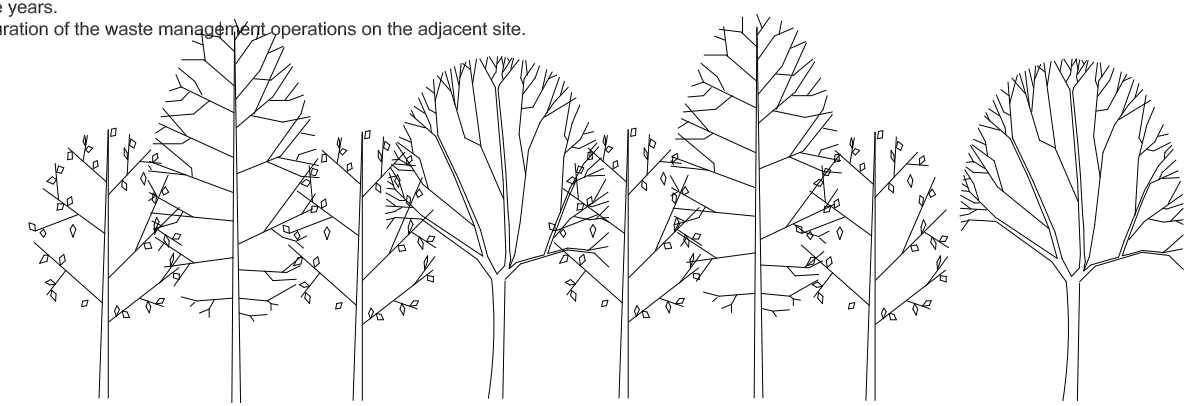

Meadow grass to be cut twice each year.

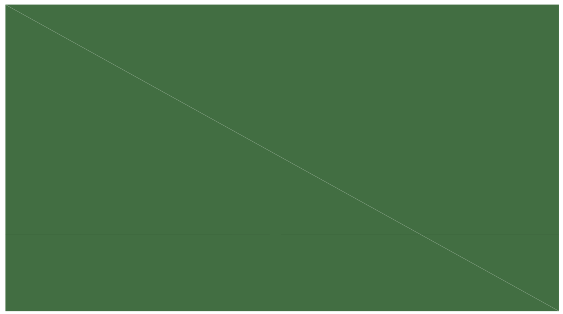

Tree ties and shelters to be checked annually. Stakes and ties to be removed as soon as trees are established.

Planting to be inspected in September each year and any dead or damaged trees replaced of like size and species in December of that year.

The maintenance programme shall be continued for five years.

The planting shall be retained and maintained for the duration of the waste management operations on the adjacent site.
