

ACP (CONCRETE) LTD

We are Part of the Thomas Armstrong Group

95mm LIGHTWEIGHT HORIZONTAL PRESTRESSED PRECAST CONCRETE WALL PANELS

Light Duty Applications

Frequently used as block work replacement ACP (Concrete) Ltd's Light Duty Horizontal Precast Concrete Wall Panels offer fast and simple installation on site with all the added benefits of off-site production. They are made to measure and designed to fit to the building frame or steel support columns to give foundation free walls.

Lightweight with a slim 95mm thickness designed for non-loadbearing applications, prestressing gives the concrete far greater strength than its size would suggest meaning that these panels provide a wall that is equivalent to a 9" reinforced and filled block wall.

All our prestressed concrete wall panels are designed and manufactured to Eurocode 2, BS8110 and BS5502 (Agriculture) industry standards and are all CE marked.

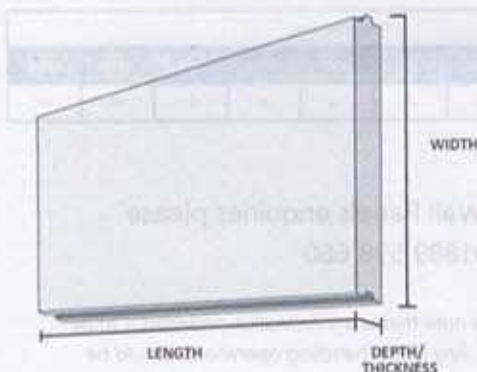

APPLICATIONS

ACP (Concrete) Ltd's prestressed, precast concrete wall panels are designed to provide structural walls across various applications.

- **Warehouse and Security** - provide non-structural walls to warehouses, offices, workshops and retail buildings.
- **Agriculture** - provide walls to livestock buildings, machinery sheds and feed stores.

STANDARD WALL PANELS SIZES

STANDARD WIDTHS

WALL PANEL THICKNESS	CODE	HALF	FULL	LENGTHS**
95mm	H95	500mm*	1000mm	up to 6.5m
			1100mm	
		600mm*	1200mm	
			1500mm	

* Flat top panels are available if required for feed barriers

** Stock lengths are designed to suit bay sizes of
 • 4.860m to suit 8.372m or 13.5 bays
 • 5.890m to suit 6.000m bays
 • 6.385m to suit 6.096m or 12.0 bays
