

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT.

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using steel rollers on the ground using two parallel stakes and a line between, or with site marker paint. The junction between corners and curves shall be cut to form a smooth notched baffle. Check that all setting out conforms to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 Planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edges and their foundations. With narrow beds between walls, fences and paths edges, ensure that the bed has space free from concrete before planting. If there is a water or drainage feature, then the landscape architect shall control the drainage. Landscape architect to determine if bedding is necessary and can be reduced or offset. The bed to be proved. The width of all beds will be checked by the landscaping landscape architect and where the width is not as shown, the contractor shall re-locate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Pre-planting herbicide application - Apply by suitable spraying equipment, an approved translocated systemic herbicide to the manufacturer's instructions and to 1997 Control of Pesticides Regulations and 2020 COSHH regulations on all areas except those areas which are to be retained and are to receive aggressive weed control. Spray immediately if any weeds are present. If the weeds are showing but planting is delayed, spray after one month following cultivation. To allow control seed to germinate. All spraying shall be carried out by skilled and qualified operators, using protective clothing in suitable weather conditions. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 300mm except where there are services, or within 10 metres of two drains or 3 metres of existing hedges. Do not rip areas where roots greater than 10mm diameter are encountered.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from roots larger than 50mm diameter, concrete, all rocks, wire, bricks and have less than 20% clay. Allow for pre-cultivation of herbicide CRF (15-6-12) slow release fertilizer. If any weeds are present, if the weeds are showing but planting is delayed, spray after one month following cultivation. To allow control seed to germinate. All spraying shall be carried out by skilled and qualified operators, using protective clothing in suitable weather conditions. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 300mm except where there are services, or within 10 metres of two drains or 3 metres of existing hedges. Do not rip areas where roots greater than 10mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation. The extent of all planting beds greater than 100mm diameter, colour, adjacent grass or paved surfaces, within 400mm of edges to ensure bed or road chip mulch are retained. Where grass is proposed adjacent to paving, then the soil shall be flush with the adjacent paved surface to ensure the water run-off. The landscape architect is responsible for ensuring that the final product conforms to the specification even when the developer and/or main contractor have failed to supply and/or spread topsoil to the required level. The landscape architect shall allow for adjustment of levels, as specified above, including any topsoil added and topsoil where beds are sloping, ensure that topsoil is graded to the specified levels before pavement & grass surfaces are laid. 400mm of the edge of the bed. This is to allow for sheet mulch and bed or road chip mulch to that shall not be put out on to pavements and also to allow surface water to drain from paths on to planted areas.

2.4 Spacing ground that is shown to be further where there is already adjacent to 100mm levels of the grass areas shall be graded to finish flush with the finished pavement level to allow surface water to drain from pavements to soil areas. Soil of grass areas shall therefore never be proud of paved areas. Soil levels more than 10mm below pavement edges will cause major damage on rutting.

2.5 Imported topsoil where specified and sanctioned by the developer for making up ground, shall conform to BS 3882:2015, and be free from roots (over 50mm diameter), concrete, roots, wire and brick, and have less than 20% clay. Such soil shall be supplied as a minimum of 300mm depth. Representative samples shall first be approved by the landscape architect before being supplied to site. No topsoil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, setting and trees, and also for contractual maintenance requirements.

3.2 All specifications will be accepted without the prior approval of the landscaping landscape architect. The contractor shall replace or once at his own cost any stock, species or variety of plant which has not been specified on the planting plan and checked, unless a prior written agreement is obtained from the landscaping landscape architect. All plants shall be true to size specified in the schedule of plants and associated notes.
