

Parking Provision Details

The proposed solar array is ground-mounted and designed to be low maintenance. Once installed, it would not require regular vehicle visits and would not create any ongoing parking demand.

During the installation phase, installers would access the field from the adjacent property at Cadeby Hall. There is sufficient existing parking within the adjacent property for installation vehicles and contractors. No additional parking areas are required.

No parking would take place on the public highway, and the proposal would not result in obstruction, highway safety issues or disturbance to public roads.

The installation does not require heavy vehicle access, and no changes are proposed to existing access arrangements. As such, the development would have no material impact on parking provision or highway use.
