

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT

1.0 Setting out

1.1 Planting shall be set out easily as shown on the drawing and measured from existing fixed points. Curved beds shall be set out using rods pinned on the ground using two central stakes and a line between, or with the master chain. The junction between corners and curves shall be set out to form a smooth and even flowing line. Check that all setting out conforms to the landscape architect and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment of the contractor's expense.

1.2 Laid beds shall be a minimum of 1 metre wide, except where there is insufficient space due to the constraints of walls and path edgings and their foundations. With narrow beds between walls/fences and paths, ensure that the bed has space free from concrete footings before planting. If the bed is nested with corners, then the landscape contractor shall contact the site manager or landscape architect to determine if footings are excessive and can be reduced or else, the bed can be paved. The width of all beds will be checked by the inspecting landscape architect and where the width is less than the minimum shall be adjusted them to the specified width at his own expense.

2.0 Ground preparation

2.1 Preexisting herbicide application-Apply by suitable spraying apparatus, an approved translocated systemic herbicide to the manufacturer's instructions and to: 1987 Control of Pesticides Regulations and 2020 COSHH regulations on labels, except those which are both weed free and are to receive agricultural steel mulch. Spray immediately if any weeds are present. If no weeds are showing but planting is delayed, spray after one month following cultivation to allow control time to penetrate. All spraying shall be carried out by skilled and qualified labour, using protective clothing, in suitable weather (no wind) and any damage caused by spray drift, from spraying or rainfall, shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and ease of all weed removal from site.

2.2 Carry out the following works to the existing topped up site to ensure it conforms to BS 3882:2013, being the firm rods larger than 50m diameter, concrete, all roots, wire, brick, and have less than 20% clay, allow for compaction of 100kPa to 150kPa. Fertiliser with 100g per meter square of Hortobac CSF 15-6-12 slow release fertilizer. In accordance with the manufacturer's instructions. For beds less than 5 metres in width, break up the substrate and topsoil are completely broken up and mixing, mixing any manure. For beds greater than 5 metres in width, break up the substrate and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 400mm of edges to corners, bank or most. If any manure are retained, where grass is proposed adjacent to paving, then the soil must be laid with the landscape contractor is responsible for ensuring that the final product conforms to the specification even where the developer and/or main contractor have laid it supply and spread topped to the required level. The landscape contractor shall adjust to adjacent levels, as specified above, including for existing natural and topped. Where beds are sloping, ensure that topped is graded to the specified levels below pavement & grass surfaces within 400mm of the edges of the bed. This is to allow for sheet mulch and soil or wood chip mulch so that mulch does not pull out on to pavements and also to allow surface water to drain from paths on to pavements.

2.3 Existing ground that is to remain in the final where there is paving adjacent to a topped level of the grass areas shall be graded to a level 10mm above the finished pavement level to allow surface water to drain from pavements to soft areas. Soil of grass areas should therefore never be proud of paved areas. Soil levels more than 10 mm above pavement edges will cause minor damage or cutting.

2.4 Imported topsoil where specified and sanctioned by the employer for making up ground, shall conform to BS 3882:2013, and be free from rocks (over 50mm diameter), concrete, roots, wire and brick, and have less than greater than 20% clay. Soil can still be cultivated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, sowing, and trees, and also for contractual maintenance requirements.

3.2 No substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall reduce at once if he own cost any stock (species or variety of plant) which has not been specified on the planting plan and schedule, unless via prior written agreement a substitution has been proposed by the inspecting landscape architect. All plants shall be true to the specified schedule. Plants shall be supplied in the following sizes: 1. All plants are 10mm diameter and 15mm deep. 2. All plants are 20mm diameter and 15mm deep. 3.
