1 INTRODUCTION

1.1 Project Scope

Thomas Consulting has been commissioned by CNG to carry out a preliminary risk assessment for the proposed development of a CNG Fuels biomethane refuelling station, located at Land South of A5 Watling Street, Hinckley, LE10 3ED. This report will assess the potential contamination risks associated with the proposed development.

1.2 Proposed Development

This report has been prepared to support a planning application for the construction of a biomethane HGV fuelling facility. As the site will be connected to the main pipeline and gas compressed on site, the development should be considered a commercial yard with medium risk. The new development will be served via a new access provided by a ghost island right turn lane priority junction off the A5.

1.3 Aim and Objectives of Report

Using available data to understand the potential risks associated with contamination at the site, Thomas Consulting will conduct a review of the following:

- Historical use of the site; using a combination of previous OS Maps and satellite imagery
- The environmental setting, including geological, hydrogeological, hydrological and manmade features at and around the site; provided using Enviro and Insight Reports (hereafter referred to as the 'Insight Report' sourced from Groundsure
- Potentially significant pollutant linkages; using an initial conceptual model of sources, pathways and receptors developed in accordance with the guidance.

The findings of this review shall establish any concerns associated with the risks identified or perceived and establish the actions required to assess or mitigate these risks.

1.4 Limitations

The findings of this report arise from our interpretation of the information available at the time. Information reviewed for this report includes Searches completed by Groundsure, who adhere to the Conveyancing Information Executive Standards to demonstrate their provision is completed with due care and skill.

The conclusions and recommendations presented in this report are the result of our professional interpretation of the information currently available. Thomas Consulting reserve the right to amend the conclusions and recommendations if further information becomes available.

However, it should be noted that much of the information relied upon has been written by others and Thomas Consulting take no responsibility for the accuracy of that information. Notwithstanding the above, the reports used have all been written by professional environmental consultants with a duty of care to provide relevant and accurate information.

Issues associated with invasive plant species are outside the remit of this assessment.

Land South of A5 Watling Street, Hinckley, LE10 3ED

2 SITE DESCRIPTION

2.1 Location

The 0.74 ha site is identified on the Site Location Plan (Drawing No: 042-01-CNG-101) – See Appendix A

The site is located on the A5 approximately 2.6km south west of Hinckley and 760m south west of the A5/A47 junction. The grid reference is 440080 292977. Surrounding the site is predominantly agricultural fields to the south and industrial/warehouses to the north. Immediately to the east is a long-established petrol filling station, served by separate access from the A5. Further east exists an industrial state containing an electricity substation and infrastructure for the National Grid.

2.2 Layout & Description

The proposed site layout is shown on Site Layout Plan (Drawing No: 042-01-CNG-104) – See Appendix A

Currently the land forms part of a wider greenfield plot currently comprising flat grassland that is understood to be used for grazing. This is proposed to be developed into a biomethane refuelling station by CNG Fuels. HGVs will be routed in a clockwise flowing one-way system around the site. 12 fuelling islands are allocated in the centre of the site. Infrastructure including gas storage banks, compressors and backup generator are proposed to be located on the eastern boundary. The site will be predominantly hard surfaced, however, landscaping will be added on raised islands between the site and the A5 and on the northern boundary.

Land South of A5 Watling Street, Hinckley, LE10 3ED

3 SITE HISTORY

A review of historical maps available has been completed. Copies of maps, which are reproduced with the permission of the National Library of Scotland are shown in Appendix B. For more recent years, satellite images from the Insight Report are used to supplement the information.

3.1.1 1886

The map shows that the site is surrounded by undeveloped agricultural land on all sides. The line of the A5 is already visible at this stage. The current railway seen crossing 200m to the north west of the site is also identified at this stage. The Sketchley Brook is marked flows to the south of the site.

3.1.2 1901

No additional developments are identified for the site or surrounding area.

3.1.3 1923

Newly constructed small buildings are identified to the north east of the site, on the northern edge of the A5.

3.1.4 1938

No additional developments are identified for the site or surrounding area.

3.1.5 1930 - 1954

To the north of the A5, several additional buildings have been constructed. They border on to open fields which suggests they have agricultural uses.

3.1.6 1958 - 1967

Immediately east of the proposed development a garage is marked. This is on the site of the current BP petrol filling station. To the north west of the site a small works is identified. There is a pylon running parallel to the Sketchley Brook south of the site.

3.1.7 1999

Satellite imagery has been used to assess the site and surrounding area. No additional developments are identified.

3.1.8 2008

Satellite imagery has been used to assess the site and surrounding area. No additional developments are identified.

3.1.9 2010

Satellite imagery has been used to assess the site and surrounding area. No additional developments are identified.

3.1.10 2017

Satellite imagery has been used to assess the site and surrounding area. No additional developments are identified.

PRELIMINARY RISK ASSESSMENT

Land South of A5 Watling Street, Hinckley, LE10 3ED

3.1.11 2020

Satellite imagery has been used to assess the site and surrounding area. Land immediately north of the site, across the A5 appears to be a construction site. Referring to the current layout, it is suggested these are landscaping works prior to settlement on the existing traveller site.

4 ENVIRONMENTAL SETTING

The Environmental setting of the site, including the geological, hydrogeological and hydrological and manmade features of this site are established using the information included in Groundsure's Insight Report. The Enviro and Geo sections of this report are shown in Appendix B and C, respectively.

4.1 Geology

A geological assessment is completed to identify the character of the soil, superficial strata and bedrock layers underlying the proposed development. The results are shown in Table 1.

Table 1: Geological Assessment

Geological Assessment		
Geological Layer	Classification	Description
Soil	Soilscape 18	Slowly permeable seasonally wet slightly acid but base-rich loamy and clayey soils
Superficial (Drift)	Alluvium	Sand with Clay and Gravel
Bedrock (Solid)	Mercia Mudstone	Mercia Mudstone Group – Mudstone (Rhaetian Age – Early Triassic Epoch)

4.1.1 Boreholes

The Insight Report has no boreholes located within 250m of the site. The closest boreholes identified are located approximately 1km north west of the site. The results of the three surveys obtained are summarised in Table 2 below.

Table 2 summarises the boreholes identified. The minimum and maximum depths to top of strata are given as a range. The average depth is also shown in brackets.

Depth to Top of Stratum (m)	Strata
0	Topsoil
0.30 – 0.40 (0.37)	Stiff brown and grey silty CLAY, traces of decayed roots
0.80 – 2.30 (1.70)	Stiff red brown and grey silty CLAY, traces of decayed roots, becoming fissured at depth
3.00 – 7.50 (4.83)	Base of Borehole

4.1.2 Made Ground

The Groundsure report identifies a single instance of made ground in close proximity to the site. This is located 224m east of the proposed development. This feature is on the site of the industrial estate where the National Grid site is located.

PRELIMINARY RISK ASSESSMENT

Land South of A5 Watling Street, Hinckley, LE10 3ED

Recent aerial photography has been reviewed for the site and this shows open pasture land. Therefore it is not thought there is any made ground present on site. However, this should be confirmed prior to any construction taking place.

4.1.3 Linear Features

Superficial strata and bedrock are uniform around the site. No linear faults or features are identified within 500m of the site.

4.2 Mining and Ground Stability

4.2.1 Mining History

There is no reference made to any mining activities in the vicinity of the site.

4.2.2 Ground Stability

Hazard ratings associated with ground subsidence are provided in the Insight Report and are summarised in the Table 3 below.

The highest risk observed is a moderate risk of compressible deposits. Soft materials such as clay may compress if loaded by overlying structures, or if the groundwater level changes, potentially result in depression of the ground and disturbance of foundations.

Table 3 summarises the Groundsure's assessment of ground stability hazards within the site boundary

Natural Ground Subsidence	Hazard Rating	Inference
Shrink-Swell Clay	Very low	Ground conditions predominantly low plasticity
Running Sands	Low	Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.
Compressible Deposits	Moderate	Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.
Collapsible Deposits	Negligible	Deposits with potential to collapse when loaded and saturated are believed not to be present.
Landslides	Very low	Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.
Ground dissolution of soluble rocks	Negligible	Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.

4.3 Hydrogeology

Assessment of the Insight report has found both the superficial strata and bedrock are capable of supporting water supplies. Furthermore, geological information is used to produce a qualitative classification of estimated rates of vertical movement of water from the ground surface. These findings are summarised in Table 4.

Table 4: Aquifer designations and vulnerability

Geological Layer	Designation	Vulnerability	Permeability
Superficial Strata	Secondary A	Medium	Intergranular Flow High – Very Low
Bedrock	Secondary B	Low	Fracture Low

Land South of A5 Watling Street, Hinckley, LE10 3ED

4.3.1 Aquifer Designations

Principal Aquifers - These are layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.

Secondary A Aquifers - Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers.

Secondary B Aquifers - Predominantly lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons, and weathering. These are generally the water-bearing parts of the former non-aquifers.

Secondary (Undifferentiated) Aquifers - Has been assigned in cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.

4.3.2 Vulnerability Designation

This is defined as the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties.

High - Areas able to easily transmit pollution to groundwater. Likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.

Medium - Intermediate between high and low vulnerability

Low - Area that provide good protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of low permeability superficial deposits.

4.3.3 Groundwater

The Insight report shows that the site is not located in a source protection zone. Under the Water Framework Directive, the bedrock aquifer is given an overall quality rating of good (chemical – good, quantitative – good).

The closest active groundwater abstraction is located 1700m north east of the site and is used for pollution remediation purposes.

4.4 Hydrology

4.4.1 Surface Water Features

The nearest surface water feature to the site is the Sketchley Brook. This is designated as an EA main river and located approximately 160m east and south of the proposed development and flows in a south westerly direction. Approximately 2km downstream, it forms a confluence with the Harrow Brook.

The channel is situated in the Sketchley Brook from Source to River Anker water body catchment. This has an overall quality rating of moderate (chemical – fail, ecological – moderate).

PRELIMINARY RISK ASSESSMENT

Land South of A5 Watling Street, Hinckley, LE10 3ED

4.4.2 Abstraction & Discharge Consents

There are no active surface water abstractions identified in the surrounding area.

Three historic discharges are identified into the Sketchley Brook, upstream of the proposed development. These consist of trade and sewage discharges. No existing consents are recorded.

4.5 Flood Risk

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea model is stated in the Insight report. The site is predominantly at negligible risk. An area of low flood risk crosses the south western boundary of the site and a small area is classified as medium towards the western corner. Key infrastructure should not be located in these areas.

There is low risk of groundwater flooding on site.

4.6 Contaminated Land & Landfill Activities

4.6.1 Landfill Activity

No active or historic landfill sites are identified by the Insight report.

4.6.2 Waste Sites and Exemptions

Five historical wastes sites within 250m of the proposed development are identified using LPA records by the Insight report. These consist of scrap yards and waste transfer stations.

Active or recently closed licenced waste sites in the area are also reviewed. All sites within 250m are waste transfer stations. Multiple waste exemptions for storing waste are associated with these sites.

4.6.3 Pollution

Two historical pollution incidents are recorded within 250m of the site. These are listed in Table 5. It is not expected that these events have lead to contamination of the land proposed for development, due to their low recorded impact and distance from the site.

Table 5: Pollution incidents from nearby industry. Since 2006, this data has only included category 1 (Major) and 2 (significant) incidents

Location / Year	Pollutant Description	Impacts
145m SE / 2002	Contaminated water - Suspended solids	Water – 3 (minor) Land Impact –4 (no impact) Air Impact – 4 (no impact)
209m NW / 2003	Atmospheric – dust	Water Impact – 3 (minor) Land impact – 4 (no impact) Air impact – 4 (No impact)

4.6.4 Dangerous or Radioactive releases

According to the Insight report, there have been no List 1 & 2 dangerous substance releases and no radioactive incidents occurring within 250m of the site.

Land South of A5 Watling Street, Hinckley, LE10 3ED

4.6.5 Industrial Land Use

No records of Part A(1) installations are recorded for within 250m of the proposed development. The service station immediately east of the proposed CNG site is recorded under Part B of the Environmental Permitting Regulations.

4.6.6 Radon

BGS data obtained through the Insight Report shows that less than 1% of homes are above the action trigger level. No radon protection measures are required.

4.6.7 Soil Chemistry

BGS estimated background soil data is recorded for the site. Ranges for the potentially harmful elements Arsenic, Cadmium, Chromium, Copper, Lead and Nickel in topsoil are given in Table 6.

Table 6: BGS Estimated Background Soil Chemistry. Summary of all on-site records

Arsenic	Bioaccessible Arsenic	Lead	Bioaccessible Lead	Cadmium	Chromium	Nickel
15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	40 – 60 mg/kg	15 – 30 mg/kg

4.6.8 Other Contamination Issues

No other contamination issues are identified for the proposed development.

4.7 Sensitive Land Uses

There is a nitrate vulnerable zone designated across the site.

The site borders the Birmingham Green Belt area.

CNG's proposed development is located in a SSSI Impact Risk Zone. However, it does not fall under the types of developments requiring consultation with respect to the associated SSSI.

Agricultural land to the south of the site is classed as Grade 3 – good to moderate quality agricultural land.

5 SOURCE - PATHWAY - RECEPTOR MODEL

5.1 General

This section uses the source - pathway - receptor approach to establish potential contaminants of concern, sources, pathways and receptors which may be a consequence of the site history, existing condition and related to the proposed development.

This information is used to develop a conceptual model which is used to understand potential sources of environmental pollution, how they are mobilised and the receptors which could be at risk. At the Preliminary Risk Assessment stage, this information remains qualitative and is used to assess which potential linkages should be investigated further.

5.1.1 Sources

Sources are where the contaminant arises from. They may either be a result of anthropogenic activity (e.g. fuel spillage), or naturally occurring (e.g. ground gases from geology). This report has investigated the environmental setting, past and previous land uses to best identify the potential sources. Point sources originate from single location, whereas diffuse sources develop from a larger area, making it harder to quantify the potential for contamination. When considering potential sources, it is also necessary to account for their potential lifetime.

5.1.2 Pathways

Potential pathways are the processes, such as environmental routes or human health exposure pathways which may mobilise contaminants from the source to the receptor. Table 7 contains common pathways to various receptors. Direct pathways are defined as routes which transport the contaminant straight from the source to the receptor. In this case there are unlikely to be any processes between source and receptor which can reduce the dose and thus mitigate any impact. On the other hand, indirect pathways deliver the contaminant to the receptor via multiple processes. Here there is the potential for losses to take place before contamination reaches the receptor, therefore we may expect the dose received is lower than the available quantity at the receptor.

Table 7 contains common pathways which provide a link between sources and receptors. The pathways are grouped by their receptor.

Receptor	Direct Pathways	Indirect Pathways
Human Health	Dermal absorption Inhalation of soil & dust, or volatile compounds Soil ingestion	Plant uptake, followed by ingestion of the plant Passage to water which is then used for drinking water supplies Bioaccumulation in the food chain
Aquatic Environment	Surface runoff Leaching to groundwaters	Deposition on impermeable surfaces before mobilisation by surface runoff
Fauna	Root uptake Adsorption onto root and leaf surfaces	Volatilization from soils which allows uptake by foliage
Buildings & Construction	Contact with surfaces	Disturbance of ground gases which may leach into enclosed spaces.

5.1.3 Receptors

These are the entities which may be harmed by the contamination. The significance of a pollutant event can be assessed by considering the sensitivity of the receptor and magnitude of effect. Criteria for these are defined in Table 8 and Table 9.

Table 8 defines criteria for the sensitivity of a receptor

Sensitivity	Criteria
1 - High	The receptor is at elevated vulnerability to decline, beneficial at a national or regional scale, or has limited potential for replacement/remediation
2 - Medium	The receptor is at moderate vulnerability to decline, beneficial below a regional scale, or has some potential for replacement/remediation
3 - Low	The receptor is at low vulnerability to decline, beneficial at local scales, or has good potential for replacement/remediation
4 - Negligible	The receptor is at very low vulnerability to decline, has negligible benefit, or can be quickly and easily replaced/remediated.

Table 9 defines criteria to understand the magnitude of effect that any pollutant linkage may cause

Magnitude	Criteria
1 – High	The change from the baseline conditions is measurable and this change constitutes total or major alteration to the conditions
2 – Medium	A measurable change with material alterations to the baseline conditions. May result in the loss of key features
3 - Low	Changes will be measurable and detectable, however any material alteration to the baseline conditions will be limited.
4 - Negligible	Any change compared to the baseline condition will be difficult to measure and not material.

These criteria make it possible to qualitatively evaluate the level of significance, using the matrix outlined in Table 10. This is provided for guidance only and any assessment should also account the likelihood of an effect occurring and confidence in the information used. For this preliminary risk assessment, it can be deemed useful for understanding which links to investigate further.

Table 10 defines a significance matrix, used to evaluate the significance of a potential linkage

		Magnitude of Effect			
		High	Medium	Low	Negligible
Sensitivity of Receptor	High	Major	Moderate	Minor	Insignificant
	Medium	Moderate	Moderate	Minor	Insignificant
	Low	Minor	Minor	Insignificant	Insignificant
	Negligible	Insignificant	Insignificant	Insignificant	Insignificant

5.2 Potential Sources of Contamination

5.2.1 BP Filling Station

A road vehicle servicing and repair garage and filling station is identified in the historical maps (post 1958 – 1967) and from current location plans. Priority contaminants for industrial land uses have been reviewed by DEFRA and a summary is given in CLR8; Priority contaminants for the assessment of land contains. The contaminants likely to be associated with the filling station are listed in the Table 11. This development is expected to be fitted with a suitable drainage network, designed to a significant storm event, to prevent contamination off the site.

Table 11 shows the important contaminants associated with past industrial land use identified for the development

Type	Road Vehicle Servicing; Garages and Filling Stations
Metals	Cr, Cu, Pb, Zn,
Semi-Metals and Non-Metals	N/A
Inorganic Chemicals	N/A
Organic Chemicals	Oil/fuel Hydrocarbons, Aromatic hydrocarbons, PAHs, Chlorinated aliphatic hydrocarbons, Organolead compounds
Other	Asbestos, pH

Land South of A5 Watling Street, Hinckley, LE10 3ED

5.2.2 Made Ground

No made ground is identified on the proposed development. However, this should be verified prior to any construction works taking place.

5.2.3 CNG Site Use

CNG Fuels sites distribute a compressed natural gas. This is lighter than air so is expected to disperse into the atmosphere, rather than into the local ground and water environment. HGV's on site will contain hydrocarbon oils, so any spillage will provide a potential source of contamination.

5.2.4 Soil Gases

The site is underlain by alluvial soils and Mercia mudstone. In this strata, gas is generated over geological timescales and is trapped in pore spaces due to limited transport (at low diffusion rates). Alluvial soils are not likely to generate hazardous gas flows and gas monitoring is not required.

5.2.5 Fertiliser use on existing arable land

It is perceivable that fertilisers may have been spread on the existing arable farmland the proposed development is situated on. Likely contaminants will consist of Nitrogen, Phosphorus and Potassium compounds. A potential source of contamination arises where certain compounds have bound to surface soils and have accumulated on the site.

5.3 Potential Pathways

The most common pathways listed in Table 7 are reviewed and those relevant to the proposed development are listed below.

5.3.1 Surface runoff

The development of a fuelling station on this parcel of land will increase the impermeable area of the site, which is expected to increase the proportion of surface runoff generated. Surface runoff is associated with the mobilisation of contaminants present on the surface and they will be transported with the rainfall towards drainage areas or waterbodies, either in solution or as suspended solids. Existing levels provided in the topographical survey show that the ground naturally drains towards the western corner of the site. However, the site will be designed with suitable levels and drainage to contain within the system storm events of a 1 in 30 year return period and contain within the site storm events of a 1 in 100 year + climate change uplift. Therefore, runoff is unlikely to exceed the site.

Areas of flood risk Zone 2 and 3 impede on the south western boundary of the site. During a significant storm event, flood levels have the potential to exceed the existing ground level at this edge of the site and provide a pathway for pollutants to leave the site.

5.3.2 Infiltration

Estimated rates for vertical movement of water in the superficial strata range from very low to high, and these are driven by intergranular flow. Therefore, infiltration will provide a potential pathway. This pathway is more feasible during the construction phase where soils are left exposed. Once the site is operational, it will predominantly be surfaced with impermeable concrete and any runoff captured in a drainage network.

Rates for infiltration through bedrock are estimated to be low. This strata is not likely to support pollutant migration.

Land South of A5 Watling Street, Hinckley, LE10 3ED

5.3.3 Inhalation / Ingestion

Site works will disturb soils on the site. Soil particles are expected to be vectors for any chemical and biological contamination on the site. Smaller particles may be mobile above ground level whilst construction workers are on site, especially around vehicle movements. Larger particles may be mobilised into the air by high wind. These can be inhaled by contractors on site. Furthermore, tools and materials moved around by contractors provide a media for particles to reach contractors gloves. From here they may be accidentally ingested by hand to mouth contact.

5.4 Potential Receptors

The environmental setting of the site has been used to inform the receptors around the proposed development which may be harmed by a pollutant that comes into contact.

5.4.1 Groundwater

Superficial strata and bedrock are classified as Secondary A and Secondary B aquifers respectively. These are capable of supporting groundwater at or below a local scale, however there are no active groundwater abstractions identified in the surrounding area.

Using the criteria in Table 8, the sensitivity of the groundwater receptor should be considered low.

5.4.2 Buildings, Services & Operators

There are no enclosed buildings on site where hazardous concentrations of gas compounds may accumulate.

Construction workers on the development have the potential to be exposed to contamination on the site. However, the risks can be mitigated by the use of suitable PPE. Referring to Table 8, sensitivity can therefore be considered low.

5.4.3 Surface Waters

The Sketchley Brook EA main river flows to the south of the site. Due to the superficial strata underlying the site (alluvium – sand, with clay and gravel), it is suspected that infiltration methods to discharge surface water from the site will not be feasible. Therefore, it is likely that these will instead be discharged into this watercourse, following treatment by a retention separator and swale. Consequently, the Sketchley Brook will be at risk where treatment of water leaving the site is insufficient.

The WFD water quality rating shows this watercourse has already been subject to decline. Chemical water rating is recorded as a fail for 2019. The drainage network will be designed to provide full treatment to runoff from the site. Therefore sensitivity of this receptor can be considered negligible.

5.4.4 Agricultural Land

Land to the south of the site is designated as Grade 3 agricultural land. Currently it is used as open pasture land for grazing. This implies it is beneficial at a local scale. Criteria in Table 8 suggest this receptor has low sensitivity to contamination.

5.5 Potentially Significant Pollutant Links

The identified potential sources of contamination, pathways and receptors are assessed in a preliminary conceptual model to establish plausible pollutant linkages. The criteria for this model are outlined in Tables 8-10. Potential links which are deemed significant are advised below.

Land South of A5 Watling Street, Hinckley, LE10 3ED

5.5.1 Link 1 – Surface runoff of contaminants from HGV's from impermeable area, towards agricultural land.

A potential source of contamination is identified for spillage of fuels and oils from HGV's. Surface runoff shall be contained by the drainage network during normal operation of the site. This is more likely to occur during construction works, before the drainage is in place. Any exceedance off the site shall flow towards Grade 3 agricultural land southwest of the site.

This receptor has a low sensitivity and using the criteria in Table 9, the impact of any linkage is likely to be low. Therefore, this linkage is considered insignificant and requires no further investigation.

5.5.2 Link 2 – Surface waters exceeding the impermeable site and infiltration to groundwater.

A potential source of contamination is identified for spillage of fuels and oils from HGV's. Any exceedance from off the site could enter the groundwater. This is more likely to occur during construction works, before the drainage is in place.

As stated in the section above, pollutant linkages transporting contamination offsite are not significant. The superficial strata is estimated to have very low to high permeability, so further investigation should be completed to assess this. Superficial strata and bedrock aquifers are deemed to have a low sensitivity, as identified in Section 5.4.1. Very limited quantities of pollutant are expected to reach the aquifer and will have a low impact. Therefore, this potential linkage is considered insignificant and no further investigation is necessary.

5.5.3 Link 3 – Inhalation / Ingestion of contaminated soils and dusts by construction workers.

site currently consists of open pasture land, where potential pollution from past fertiliser is identified. Soils and dusts will be mobilised during construction works by excavations and vehicle movements. Contractors working on the site may inhale smaller particles or ingest larger particles after hand to mouth contact.

The quantity of contamination present in the ground, however minimal quantities are likely to reach the receptor. As a result, the sensitivity and impact on the receptor to any exposure is considered low, this linkage is also considered insignificant.

Land South of A5 Watling Street, Hinckley, LE10 3ED

6 RECOMMENDATIONS

6.1 Findings

An SPR conceptual model has been used to provide a preliminary risk assessment for contamination risks relevant to the development of a CNG biomethane fuelling station the land south of A5 Watling Street, Hinckley. Three linkages are investigated from potential sources, pathways and receptors are identified. It is found all linkages investigated are insignificant and do not need to be considered further.

6.2 Next Steps

6.2.1 Site Works

To fully assess the risks associated with contamination, we recommend a Phase 2 – Detailed Site Investigation is completed. This is required to confirm that that key factors used in the assessment of potential pollutant linkages confirm the information provided in the Insight report. The information gathered can also be used to inform the engineering design of the development.

Borehole Survey

A number of window sample boreholes should be installed across the site. Ground conditions should be recorded by an experienced engineer. Samples should be recovered for chemical, geotechnical and water quality testing.

A moderate risk of compressible deposits has been identified for the site. Therefore SPT testing in all boreholes must be completed to understand the consistency of loading capacities across the site and be sufficient to inform the design of any structures.

Trial Pits

Due to the moderate risk of compressible deposits on the site, it is suggested the results of the above borehole survey and SPT testing is verified by digging a series of trial pits across the site.

Chemical Testing

A sampling program, using samples gathered from the boreholes should be completed to understand the type and concentration of contaminants present on the site. A standard testing suite of common contaminants should be included.

Infiltration Testing

A minimum of two infiltration tests, using trial pits compliant with the guidance in BRE 365 should be completed to determine the permeability on-site.

Reporting

Any findings made in the Phase 2 – Detailed Site Investigation should be documented in a report.

6.2.2 Permit to discharge into watercourse

Where infiltration is proven not feasible by the site works, a connection to the watercourse is required to discharge restricted and treated surface water flows, the EA should be contacted to advise on any potential discharge permits required. Furthermore, any construction in close proximity to a main river may require permits in order to connect the required infrastructure (i.e. headwalls etc).

- Historical garages

1.1 Historical industrial land uses

Records within 500m

25

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14**

ID	Location	Land use	Dates present	Group ID
A	On site	Garage	1968 - 1983	1783079

ID	Location	Land use	Dates present	Group ID
1	36m NW	Unspecified Works	1968 - 1983	1815114
2	152m NW	Unspecified Works	1968 - 1983	1839585
B	239m NE	Unspecified Commercial/Industrial	1938	1752967
C	261m E	Unspecified Depot	1983	1763800

D	430m SE	Lime Kilns	1950 - 1983	1819594
D	430m SE	Lime Kilns	1938	1799682
5	434m N	Unspecified Wharf	1886	1769342
E	436m NW	Cuttings	1901 - 1938	1824080
E	463m NW	Cuttings	1950	1811570
6	468m NE	Brick and Tile Works	1886 - 1901	1804031
7	475m NE	Unspecified Wharf	1901	1827520

This data is sourced from Ordnance Survey / Groundsure.

1.2 Historical tanks

Records within 500m

2

Tank features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14**

ID	Location	Land use	Dates present	Group ID
A	4m SE	Unspecified Tank	1987	297781
A	6m E	Unspecified Tank	1962	298716

This data is sourced from Ordnance Survey / Groundsure.

1.3 Historical energy features

Records within 500m

4

Energy features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14**

ID	Location	Land use	Dates present	Group ID
B	260m NE	Electric Power Station	1924	171553
3	334m S	Gas Governor	1996	171468
4	346m NE	Electricity Substation	1976 - 1993	174249
C	387m E	Electricity Substation	1976 - 1993	181868

This data is sourced from Ordnance Survey / Groundsure.

1.4 Historical petrol stations

Records within 500m**0**

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.5 Historical garages

Records within 500m**2**

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14**

ID	Location	Land use	Dates present	Group ID
A	0m E	Garage	1987	56269
A	2m E	Garage	1962	55353

This data is sourced from Ordnance Survey / Groundsure.

1.6 Historical military land

Records within 500m**0**

Areas of military land digitised from multiple sources including the National Archives, local records, MOD records and verified other sources, intelligently grouped into contiguous features.

This data is sourced from Ordnance Survey / Groundsure / other sources.

2 Past land use - un-grouped

3 Waste and landfill

- Site Outline
- Search buffers in metres (m)
- Historical waste sites
- Licensed waste sites
- Waste exemptions

3.1 Active or recent landfill

Records within 500m

0

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m

0

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m**0**

Landfill sites identified from Local Authority records and high detail historical mapping.

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m**0**

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.5 Historical waste sites

Records within 500m**6**

Waste site records derived from Local Authority planning records and high detail historical mapping.

Features are displayed on the Waste and landfill map on **page 22**

ID	Location	Address	Further Details	Date
A	151m NW	Site Address: N/A	Type of Site: Scrap Yard Planning application reference: N/A Description: N/A Data source: Historic Mapping Data Type: Polygon	1996
A	185m NW	Site Address: Watling Street, HINCKLEY, Leicestershire, LE10 3HZ	Type of Site: Waste Transfer Station Planning application reference: 96/00251 Description: An application (ref: 96/00251) for Detailed Planning permission was submitted to Hinckley & Bosworth B.C. on 3rd April 1996. Data source: Historic Planning Application Data Type: Point	-

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m	0
----------------------------	----------

High voltage underground electricity transmission cables.

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m**1**

High pressure underground gas transmission pipelines.

Features are displayed on the Current industrial land use map on **page 31**

ID	Location	Pipe Name	Details	
2	103m SW	ALREWAS TO CHURCHOVE R	Pipe Number: - Pipeline Safety Regulations Number: - Ownership: National Grid Maximum Operating Pressure (Bar): -	Pipeline Diameter (mm): 900 Wall Thickness (mm): - Year of commission: Not specified Abandonment Status: Not abandoned

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m**0**

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m**0**

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

This data is sourced from the Health and Safety Executive.

4.7 Regulated explosive sites

Records within 500m**0**

Sites registered and licensed by the Health and Safety Executive under the Manufacture and Storage of Explosives Regulations 2005 (MSER). The last update to this data was in April 2011.

This data is sourced from the Health and Safety Executive.

4.8 Hazardous substance storage/usage

Records within 500m

0

Consents granted for a site to hold certain quantities of hazardous substances at or above defined limits in accordance with the Planning (Hazardous Substances) Regulations 2015.

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m

0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m

14

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

Features are displayed on the Current industrial land use map on **page 31**

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m

0

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m

3

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

Features are displayed on the Current industrial land use map on **page 31**

ID	Location	Address	Details	
6	375m E	NUTTS LANE STORES, HINCKLEY, LEICESTERSHIRE	Effluent Type: TRADE DISCHARGES - SITE DRAINAGE Permit Number: T/19/07463/T Permit Version: 1 Receiving Water: SKETCHLEY BROOK	Status: PRE NRA LEGISLATION WHERE ISSUE DATE 01-SEP-89 (HISTORIC ONLY) Issue date: 12/12/1977 Effective Date: 12/12/1977 Revocation Date: -

This data is sourced from the Environment Agency and Natural Resources Wales.

4.14 Pollutant release to surface waters (Red List)

Records within 500m

0

Discharges of specified substances under the Environmental Protection (Prescribed Processes and Substances) Regulations 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.15 Pollutant release to public sewer

Records within 500m

0

Discharges of Special Category Effluents to the public sewer.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.16 List 1 Dangerous Substances

Records within 500m

0

Discharges of substances identified on List I of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.17 List 2 Dangerous Substances

Records within 500m

0

Discharges of substances identified on List II of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.18 Pollution Incidents (EA/NRW)

Records within 500m

13

Records of substantiated pollution incidents. Since 2006 this data has only included category 1 (major) and 2 (significant) pollution incidents.

Features are displayed on the Current industrial land use map on **page 31**

ID	Location	Details	
B	145m SE	Incident Date: 08/11/2002 Incident Identification: 119539 Pollutant: Contaminated Water Pollutant Description: Suspended Solids	Water Impact: Category 3 (Minor) Land Impact: Category 4 (No Impact) Air Impact: Category 4 (No Impact)

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m

2

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

Features are displayed on the Current industrial land use map on **page 31**

4.20 Pollution inventory waste transfers

Records within 500m	1
----------------------------	----------

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

Features are displayed on the Current industrial land use map on **page 31**

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.21 Pollution inventory radioactive waste

Records within 500m

0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer

- Site Outline
- Search buffers in metres (m)
- Principal
 - Secondary A
 - Secondary B
 - Secondary Undifferentiated
 - Unproductive
 - Unknown

5.1 Superficial aquifer

Records within 500m

3

Aquifer status of groundwater held within superficial geology.

Features are displayed on the Hydrogeology map on **page 111**

ID	Location	Designation	Description
A	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
A	99m N	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

ID	Location	Designation	Description
1	429m NW	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Bedrock aquifer

- Site Outline
- Search buffers in metres (m)
- Principal
 - Secondary A
 - Secondary B
 - Secondary Undifferentiated
 - Unproductive

5.2 Bedrock aquifer

Records within 500m

1

Aquifer status of groundwater held within bedrock geology.

Features are displayed on the Bedrock aquifer map on **page 113**

ID	Location	Designation	Description
1	On site	Secondary B	Predominantly lower permeability layers which may store/yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering. These are generally the water-bearing parts of the former non-aquifers

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Groundwater vulnerability

5.3 Groundwater vulnerability

Records within 50m

1

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on **page 114**

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
1	On site	Summary Classification: Secondary superficial aquifer - Medium Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Low Infiltration value: <40% Dilution value: <300mm/year	Vulnerability: Medium Aquifer type: Secondary Thickness: 3-10m Patchiness value: >90% Recharge potential: Low	Vulnerability: Low Aquifer type: Secondary Flow mechanism: Well connected fractures

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.4 Groundwater vulnerability- soluble rock risk

Records on site	0
------------------------	----------

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

This data is sourced from the British Geological Survey and the Environment Agency.

5.5 Groundwater vulnerability- local information

Records on site	0
------------------------	----------

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk.

This data is sourced from the British Geological Survey and the Environment Agency.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.8 Potable abstractions

Records within 2000m

0

Licensed potable water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m	0
---------------------	---

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.10 Source Protection Zones (confined aquifer)

Records within 500m	0
---------------------	---

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

This data is sourced from the Environment Agency and Natural Resources Wales.

E	190m E	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	Sketchley Brook

This data is sourced from the Ordnance Survey.

6.2 Surface water features

Records within 250m

7

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on **page 124**

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site

1

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on **page 124**

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
A	On site	River	Sketchley Brook from Source to River Anker	GB104028042470	Sence Anker and Bourne Rivers and Lakes	Tame Anker and Mease

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified	1
---------------------------	----------

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on **page 124**

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
1	110m S	River	Sketchley Brook from Source to River Anker	GB104028042470	Moderate	Fail	Moderate	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

6.5 WFD Groundwater bodies

Records on site	1
------------------------	----------

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

Features are displayed on the Hydrology map on **page 124**

ID	Location	Name	Water body ID	Overall rating	Chemical rating	Quantitative	Year
A	On site	Tame Anker Mease - Secondary Combined	GB40402G990800	Good	Good	Good	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

- Areas Benefiting from Flood Defences
- Flood Defences

7.1 Risk of flooding from rivers and the sea

Records within 50m

2

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea (RoFRaS)/Flood Risk Assessment Wales (FRAW) models. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition. The risk categories for RoFRaS for rivers and the sea and FRAW for rivers are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance). The risk categories for FRAW for the sea are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 200 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 200 chance) or High (greater than or equal to 1 in 30 chance).

Features are displayed on the River and coastal flooding map on **page 127**

Distance	Flood risk category
On site	Medium
0 - 50m	Medium

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m	0
----------------------------	----------

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m	0
----------------------------	----------

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m	0
----------------------------	----------

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.5 Flood Storage Areas

Records within 250m	0
----------------------------	----------

Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

This data is sourced from the Environment Agency and Natural Resources Wales.

River and coastal flooding - Flood Zones

- Site Outline
- Search buffers in metres (m)
- Flood zone 2
- Flood zone 3

7.6 Flood Zone 2

Records within 50m

1

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

Features are displayed on the River and coastal flooding map on **page 127**

Location	Type
On site	Zone 2 - (Fluvial /Tidal Models)

This data is sourced from the Environment Agency and Natural Resources Wales.

7.7 Flood Zone 3

Records within 50m

1

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

Features are displayed on the River and coastal flooding map on **page 127**

Location	Type
5m E	Zone 3 - (Fluvial Models)

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding

8.1 Surface water flooding

Highest risk on site

1 in 1000 year, 0.3m - 1.0m

Highest risk within 50m

1 in 30 year, 0.1m - 0.3m

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on **page 131**

The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Between 0.3m and 1.0m
1 in 250 year	Negligible
1 in 100 year	Negligible
1 in 30 year	Negligible

This data is sourced from Ambiantal Risk Analytics.

9 Groundwater flooding

9.1 Groundwater flooding

Highest risk on site

Low

Highest risk within 50m

Low

Groundwater flooding is caused by unusually high groundwater levels. It occurs when the water table rises above the ground surface or within underground structures such as basements or cellars. Groundwater flooding tends to exhibit a longer duration than surface water flooding, possibly lasting for weeks or months, and as a result it can cause significant damage to property. This risk assessment is based on a 1 in 100 year return period and a 5m Digital Terrain Model (DTM).

Features are displayed on the Groundwater flooding map on **page 133**

This data is sourced from Ambiantal Risk Analytics.

10 Environmental designations

- Site Outline
- Search buffers in metres (m)
- - - Green Belt

10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m

0

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m**0**

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m**0**

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m**0**

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m**0**

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m**0**

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m**0**

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m**0**

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m**0**

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m**0**

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m**2**

Areas designated to prevent urban sprawl by keeping land permanently open.

Features are displayed on the Environmental designations map on **page 134**

ID	Location	Name	Local Authority name
1	On site	Birmingham	Rugby
-	1464m W	Birmingham	Nuneaton and Bedworth

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m**0**

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m**0**

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m**0**

Special Protection Areas (SPAs) are areas designated (or 'classified') under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.15 Nitrate Sensitive Areas

Records within 2000m**0**

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones

Records within 2000m**1**

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

Location	Name	Type	NVZ ID	Status
On site	River Trent (source to confluence with Derwent)	Surface Water	308	Existing

This data is sourced from Natural England and Natural Resources Wales.

SSSI Impact Zones and Units

- Site Outline
- Search buffers in metres (m)
- SSSI Impact Risk Zones
- SSSI Units
- Not recorded
- Favourable
- Unfavourable - Recovering
- Unfavourable - No change
- Unfavourable - Declining
- Partially destroyed
- Destroyed

10.17 SSSI Impact Risk Zones

Records on site

1

Developed to allow rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

Features are displayed on the SSSI Impact Zones and Units map on **page 139**

ID	Location	Type of developments requiring consultation
1	On site	Infrastructure - Airports, helipads and other aviation proposals. Air pollution - Livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 750m², manure stores > 3500t. Combustion - General combustion processes >50mw energy input. incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion.

This data is sourced from Natural England.

10.18 SSSI Units

Records within 2000m	0
----------------------	---

Divisions of SSSIs used to record management and condition details. Units are the smallest areas for which Natural England gives a condition assessment, however, the size of units varies greatly depending on the types of management and the conservation interest.

This data is sourced from Natural England and Natural Resources Wales.

11 Visual and cultural designations

11.1 World Heritage Sites

Records within 250m

0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m

0

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m

0

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m

0

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.5 Conservation Areas

Records within 250m

0

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m

0

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.7 Registered Parks and Gardens

Records within 250m

0

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

12 Agricultural designations

- Site Outline
- Search buffers in metres (m)
- Grade 1 - excellent quality
- Grade 2 - very good quality
- Grade 3 - good to moderate quality
- Grade 3a - good quality
- Grade 3b - moderate quality
- Grade 4 - poor quality
- Grade 5 - very poor quality
- Non-agricultural land
- Urban land
- Exclusion land
- Tree felling licences
- Open Access land

12.1 Agricultural Land Classification

Records within 250m

5

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on **page 143**

ID	Location	Classification	Description
1	On site	Grade 3	Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.
2	On site	Urban	-

ID	Location	Classification	Description
3	On site	Grade 3	Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.
5	163m N	Grade 3b	Moderate quality agricultural land. Land capable of producing moderate yields of a narrow range of crops, principally cereals and grass or lower yields of a wider range of crops or high yields of grass which can be grazed or harvested over most of the year.
6	218m SE	Urban	-

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m

0

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m

0

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

This data is sourced from the Forestry Commission.

12.4 Environmental Stewardship Schemes

Records within 250m

0

Environmental Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. The schemes identified may be historical schemes that have now expired, or may still be active.

This data is sourced from Natural England.

12.5 Countryside Stewardship Schemes

Records within 250m

0

Countryside Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. Main objectives are to improve the farmed environment for wildlife and to reduce diffuse water pollution.

This data is sourced from Natural England.

13 Habitat designations

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

- Site Outline
- Search buffers in metres (m)
- Priority Habitat Inventory
- Open Mosaic Habitat
- Limestone Pavement Orders
- Habitat Networks
- Primary Habitat
- Restorable Habitat
- Associated Habitats
- Habitat Restoration-Creation
- Network Enhancement Zone 1
- Network Enhancement Zone 2

13.1 Priority Habitat Inventory

Records within 250m

2

Habitats of principal importance as named under Natural Environment and Rural Communities Act (2006) Section 41.

Features are displayed on the Habitat designations map on **page 146**

ID	Location	Main Habitat	Other habitats
1	123m N	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
2	158m NW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)

This data is sourced from Natural England.

13.2 Habitat Networks

Records within 250m

0

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m

0

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

This data is sourced from Natural England.

13.4 Limestone Pavement Orders

Records within 250m

0

Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

15.1 50k Availability

Records within 500m

1

An indication on the coverage of 1:50,000 scale geology data for the site. Either 'Full' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:50,000 scale - Availability map on **page 154**

ID	Location	Artificial	Superficial	Bedrock	Mass movement	Sheet No.
1	On site	Full	Full	Full	No coverage	EW169_coventry_v4

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Artificial and made ground

15.2 Artificial and made ground (50k)

Records within 500m

0

Details of made, worked, infilled, disturbed and landscaped ground at 1:50,000 scale. Artificial ground can be associated with potentially contaminated material, unpredictable engineering conditions and instability.

This data is sourced from the British Geological Survey.

15.3 Artificial ground permeability (50k)

Records within 50m

0

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any artificial deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Superficial

- Site Outline
- Search buffers in metres (m)
- Landslip (50k)
- Superficial geology (50k)
Please see table for more details.

15.4 Superficial geology (50k)

Records within 500m

3

Superficial geological deposits at 1:50,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:50,000 scale - Superficial map on **page 156**

ID	Location	LEX Code	Description	Rock description
1	On site	ALV-XCZSV	ALLUVIUM	CLAY, SILT, SAND AND GRAVEL
2	99m N	BOSW-XCZ	BOSWORTH CLAY MEMBER	CLAY AND SILT
3	429m NW	ANSG-XSV	ANKER SAND AND GRAVEL	SAND AND GRAVEL

This data is sourced from the British Geological Survey.

15.5 Superficial permeability (50k)

Records within 50m**1**

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any superficial deposits (the zone between the land surface and the water table).

Location	Flow type	Maximum permeability	Minimum permeability
On site	Intergranular	High	Very Low

This data is sourced from the British Geological Survey.

15.6 Landslip (50k)

Records within 500m**0**

Mass movement deposits on BGS geological maps at 1:50,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.

15.7 Landslip permeability (50k)

Records within 50m**0**

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any landslip deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Bedrock

— Site Outline

Search buffers in metres (m)

.... Bedrock faults and other linear features (50k)

Bedrock geology (50k)
Please see table for more details.

15.8 Bedrock geology (50k)

Records within 500m

1

Bedrock geology at 1:50,000 scale. The main mass of rocks forming the Earth and present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

Features are displayed on the Geology 1:50,000 scale - Bedrock map on **page 158**

ID	Location	LEX Code	Description	Rock age
1	On site	MMG-MDST	MERCIA MUDSTONE GROUP - MUDSTONE	-

This data is sourced from the British Geological Survey.

15.9 Bedrock permeability (50k)

Records within 50m

1

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of bedrock (the zone between the land surface and the water table).

Location	Flow type	Maximum permeability	Minimum permeability
On site	Fracture	Low	Low

This data is sourced from the British Geological Survey.

15.10 Bedrock faults and other linear features (50k)

Records within 500m

0

Linear features at the ground or bedrock surface at 1:50,000 scale of six main types; rock, fault, fold axis, mineral vein, alteration area or landform. Features are either observed or inferred, and relate primarily to bedrock.

This data is sourced from the British Geological Survey.

16 Boreholes

16.1 BGS Boreholes

Records within 250m

0

The Single Onshore Boreholes Index (SOBI); an index of over one million records of boreholes, shafts and wells from all forms of drilling and site investigation work held by the British Geological Survey. Covering onshore and nearshore boreholes dating back to at least 1790 and ranging from one to several thousand metres deep.

This data is sourced from the British Geological Survey.

17 Natural ground subsidence - Shrink swell clays

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.1 Shrink swell clays

Records within 50m

1

The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

Features are displayed on the Natural ground subsidence - Shrink swell clays map on **page 161**

Location	Hazard rating	Details
On site	Very low	Ground conditions predominantly low plasticity.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.2 Running sands

Records within 50m

1

The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

Features are displayed on the Natural ground subsidence - Running sands map on **page 162**

Location	Hazard rating	Details
On site	Low	Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

17.3 Compressible deposits

Records within 50m

1

The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

Features are displayed on the Natural ground subsidence - Compressible deposits map on **page 163**

Location	Hazard rating	Details
On site	Moderate	Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Collapsible deposits

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

17.4 Collapsible deposits

Records within 50m

1

The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on **page 164**

Location	Hazard rating	Details
On site	Negligible	Deposits with potential to collapse when loaded and saturated are believed not to be present.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Landslides

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

17.5 Landslides

Records within 50m

1

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

Features are displayed on the Natural ground subsidence - Landslides map on **page 165**

Location	Hazard rating	Details
On site	Very low	Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.6 Ground dissolution of soluble rocks

Records within 50m

1

The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on **page 166**

Location	Hazard rating	Details
On site	Negligible	Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.

This data is sourced from the British Geological Survey.

18 Mining, ground workings and natural cavities

18.1 Natural cavities

Records within 500m

0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Stantec UK Ltd.

18.2 BritPits

Records within 500m

0

BritPits (an abbreviation of British Pits) is a database maintained by the British Geological Survey of currently active and closed surface and underground mineral workings. Details of major mineral handling sites, such as wharfs and rail depots are also held in the database.

This data is sourced from the British Geological Survey.

18.3 Surface ground workings

Records within 250m

0

Historical land uses identified from Ordnance Survey mapping that involved ground excavation at the surface. These features may or may not have been subsequently backfilled.

This data is sourced from Ordnance Survey/Groundsure.

18.4 Underground workings

Records within 1000m

0

Historical land uses identified from Ordnance Survey mapping that indicate the presence of underground workings e.g. mine shafts.

This data is sourced from Ordnance Survey/Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m

0

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m

0

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

This data is sourced from the British Geological Survey.

18.7 Mining cavities

Records within 1000m

0

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

This data is sourced from Stantec UK Ltd.

18.8 JPB mining areas

Records on site

0

Areas which could be affected by former coal and other mining. This data includes some mine plans unavailable to the Coal Authority.

This data is sourced from Johnson Poole and Bloomer.

18.9 Coal mining

Records on site

0

Areas which could be affected by past, current or future coal mining.

This data is sourced from the Coal Authority.

18.10 Brine areas

Records on site	0
-----------------	---

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.11 Gypsum areas

Records on site	0
-----------------	---

Generalised areas that may be affected by gypsum extraction.

This data is sourced from British Gypsum.

18.12 Tin mining

Records on site	0
-----------------	---

Generalised areas that may be affected by historical tin mining.

This data is sourced from Groundsure.

18.13 Clay mining

Records on site	0
-----------------	---

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Radon

19.1 Radon

Records on site

1

The Radon Potential data classifies areas based on their likelihood of a property having a radon level at or above the Action Level in Great Britain. The dataset is intended for use at 1:50,000 scale and was derived from both geological assessments and indoor radon measurements (more than 560,000 records). A minimum 50m buffer should be considered when searching the maps, as the smallest detectable feature at this scale is 50m. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain (1:100,000 scale).

Features are displayed on the Radon map on **page 171**

Location	Estimated properties affected	Radon Protection Measures required
On site	Less than 1%	None

This data is sourced from the British Geological Survey and UK Health Security Agency.

20 Soil chemistry

20.1 BGS Estimated Background Soil Chemistry

Records within 50m

2

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km². In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km²; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

Location	Arsenic	Bioaccessible Arsenic	Lead	Bioaccessible Lead	Cadmium	Chromium	Nickel
On site	15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	40 - 60 mg/kg	15 - 30 mg/kg
3m SE	15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	40 - 60 mg/kg	15 - 30 mg/kg

This data is sourced from the British Geological Survey.

20.2 BGS Estimated Urban Soil Chemistry

Records within 50m

0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km²).

This data is sourced from the British Geological Survey.

20.3 BGS Measured Urban Soil Chemistry

Records within 50m

0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km².

This data is sourced from the British Geological Survey.

21 Railway infrastructure and projects

- HS2 Subsurface Safeguarding

21.1 Underground railways (London)

Records within 250m

0

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

21.2 Underground railways (Non-London)

Records within 250m

0

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

21.3 Railway tunnels

Records within 250m

0

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

21.4 Historical railway and tunnel features

Records within 250m

0

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

This data is sourced from Ordnance Survey/Groundsure.

21.5 Royal Mail tunnels

Records within 250m

0

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

21.6 Historical railways

Records within 250m

3

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

Features are displayed on the Railway infrastructure and projects map on **page 174**

Location	Description
137m N	Abandoned
237m NW	Historic
237m NW	Razed

This data is sourced from OpenStreetMap.

21.7 Railways

Records within 250m

7

Currently existing railway lines, including standard railways, narrow gauge, funicular, trams and light railways. Features are displayed on the Railway infrastructure and projects map on **page 174**

Location	Name	Type
104m N	Birmingham to Peterborough Line	rail
106m N	Not given	Multi Track
108m N	Birmingham to Peterborough Line	rail
123m NW	Birmingham to Peterborough Line	rail
128m NW	Birmingham to Peterborough Line	rail
128m NW	Birmingham to Peterborough Line	rail
133m NW	Birmingham to Peterborough Line	rail

This data is sourced from Ordnance Survey and OpenStreetMap.

21.8 Crossrail 1

Records within 500m

0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

21.9 Crossrail 2

Records within 500m

0

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

This data is sourced from publicly available information by Groundsure.

21.10 HS2

Records within 500m

0

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 Ltd.

Data providers

Groundsure works with respected data providers to bring you the most relevant and accurate information. To find out who they are and their areas of expertise see <https://www.groundsure.com/sources-reference>.
