24th July 2008

Dear Mrs Poulson

Further to your most recent enquiry, for which we thank you, and our subsequent visit to site, we have pleasure in submitting our estimate for the manufacture and installation of windows, for your consideration.

Flat Iron Windows
Single Flat Iron casements will be manufactured from 30x6 Flat Steel sections, and will be provided with two 'drive-in' Hinge Pins, Notchbow handles, mounted on Axehead backplate, with Shepherds Crook Pegstay at the sill. Frames and ironmongery can be powder-coated if required, or left in zinc-coated condition for on-site painting (by others) after installation.

Glazing to the above will be with horticultural Glass. This type of glazing does not comply with current Building Regulations (Document L1). It is your responsibility to ascertain from your local authority whether or not these windows should comply. If compliance is required, please ask us for an amended estimate.

Timber Subframes
The steel windows are all to be fitted into our range of "Cottage" style subframes fabricated from Kiln-dried European Oak or Sapele Hardwood. (Note: internal sill boards have not been included, but can be provided and quoted for if required.) All subframes will be treated prior to delivery with two coats of Boiled Linseed (unless otherwise specified).

Traditional Windows
'Traditional' style timber windows manufactured from kiln-dried European Oak or Sapele Hardwood, glazed externally with Horticultural Glass. All opening windows will be weatherstripped and will be provided with Black-finished Monkey Tail handles and stays.

Quantities — Key - SH = Side Hung opener F = Fast frame

1 No	SH | F	940 x 1050 mm high
1 No	SH | F	920 x 970
