Design & Access Statement

Proposed Windows to 8 – 10, George Street, Barwell

We are looking to turn a commercial body shop unit into an office and storage areas.

As a result we would like to install 3no UPVC plastic windows into an existing wall to either side of an existing doorway, to project as much natural light into the new office area to reduce our carbon foot print.

As you will see from photo 1a the existing wall is rendered, we will be removing this render when installing the proposed new windows and we will re-new all the rendering, which will be painted white.

Photo 1b shows the view from looking out of the proposed windows.
