ONLY

NOTES:

SITE AREA:

TREES:
(Tree Reference: Stem Diameter: RPA)

T1: 800mm: 9.6m
T2: 500mm: 6m
T3: 400mm: 4.8m
T4: 400mm: 4.8m
T5: 800mm: 9.6m
T6: 400mm: 4.8m
T7: 800mm: 9.6m
T8: 600mm: 7.2m
T9: 800mm: 9.6m

Please note all stem diameters are rounded up to next 100mm, as per Topographical Survey.

Root Protections Area's annotated in lime green circle on plan.

Proposed Hedgerow Specification and Management:

180 metres total in length

4 whip sized hedging plants per metre, 0.6-0.9mm tall/ bare root in protective tubes, species to be planted in a random mix

Species Mix:
-50% Hawthorn (*Crataegus monogyna*)
-30% Blackthorn (*Prunus spinosa*)
-20% Hazel (*Corylus avellane*)

Hedgerow to be planted in the next planting season from issuing of consent.

Hedgerow Management:

- In the first spring after planting all lateral branches will be trimmed back by 50%. Damaged, diseased or dead wood will be pruned immediately after first leaf break. Followed with a light trim every third year, allowing the hedge to increase in size each time.
- Any dead, dying or damaged stock will be replaced with the same species as soon as practicable in the first planting season following failure, for the first 5 years.
- Guards will be checked regularly and loosened or removed to allow growth.
- A metre wide strip will be maintained in a weed free condition for at least three years, to reduce competition from grass and weeds for moisture and nutrients.
