

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using steel rollers on the ground using two parallel plates and a line batten, or with site marker pins. The junction between concrete and concrete curbs shall be cut to form a smooth and flowing line. Check that all setting out conforms to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 Planting beds shall be a minimum of 1 metre wide, except where there is a sufficient space, due to the constraints of walls and path edges, and their foundations. With normal beds between walls, fences and paths edges, ensure that the bed has space free from concrete before planting. If a bed has a wall or fence, ensure that the landscape contractor shall control the day watering or landscape architect to determine if watering is excessive and can be reduced or after, the bed can be paved. The width of all beds will be checked by the landscaping landscape architect and where the width is not as shown, the contractor shall not cultivate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Preparing herbicide application - Apply by suitable spraying machine, an approved tanked system, herbicide to the manufacturers instructions and to the Control of Pesticides Regulations and 2020 COSHH regulations on all beds, except those which are both weed free and are to receive aggressive sheet mulch. Spray after mowing and planting is delayed, spray after one month following cultivation. To allow ground seed to germinate. All spraying shall be carried out by skilled and qualified operators, using protective clothing in suitable weather conditions. For beds greater than 5 metres in width, to receive aggressive sheet mulch, spray shall be applied to the ground surface and the top of the bed. Do not spray near a water body. Ensure no excessive or uneven coverage. Fertilise with 50g of horticultural CFP (15-10-15) slow release fertilizer at 100kg/ha. The manufacturer's instructions shall be followed. For beds less than 5 metres in width, use a hand held sprayer or machine to apply a depth of 40mm, ensuring that the substrate and topsoil are completely treated and the topsoil, allowing any compaction. For beds greater than 5 metres in width, the topsoil and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 300mm except where there are services, or within 10 metres of new drains or 2 metres of existing drains. Do not dig areas where roots greater than 10mm diameter are encountered.

2.2 Determine before submitting a tender, the extent of support from the site manager with ground preparation measures. All planting beds a greater to 100mm, within 400mm of edges to ensure bark or wood chip mulch are retained. Where grass is proposed adjacent to paving, then the soil level shall be the same as the adjacent paved surface to ensure no water run-off. The landscape architect is responsible for ensuring that the final product conforms to the specification seen where the developer and/or main contractor have failed to supply and/or spread topsoil to the required level. The landscape architect shall allow for adjustment of levels, as specified above, including any levelling and/or topsoil. Where beds are along, ensure that topsoil is graded to the specified levels below pavement & grass surfaces, 400mm of the edges of the bed. This is to allow for sheet mulch and bark or wood chip mulch to be laid down. Do not set out on pavements and also to allow surface water to drain from paths on to planted areas.

2.3 Spacing ground to allow to be further where there is a service adjacent to a topsoil level of the grass areas shall be graded to finish flush with the finished pavement level to allow surface water to drain from pavements to soil areas. Soil of grass areas should receive never be ground of paved areas. Soil levels more than 10mm below pavement edges all cause major damage on cutting.

2.4 Topsoil spread (refer schedule and standard) by the developer for making up ground, conform to BS 3883:2015, and be free from: (i) stone 50mm diameter, concrete, roots, wire and bark, and less than 20% by weight. Such soil shall be laid down and not set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No topsoil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, watering, and trees, and also for contractual maintenance requirements.

3.2 No substitutions will be accepted without the prior written approval of the landscaping landscape architect. The contractor shall replace or once at his own cost any stock dead, species or variety of plant which has not been specified in the planting plan and credits, unless a prior written agreement, a substitution has been approved by the landscaping landscape architect. All plants shall be true to the species specified in the schedule of plants and associated notes.
