

Envirocheck[®]

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

LANDMARK INFORMATION GROUP®

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Dear Karen

Re: Land North Of Shenton Lane Market Bosworth Leicestershire

I refer to your email of 08 May regarding the above. I will answer your questions in turn.

1. Known pollution incidents which may have affected the site.

Environmental Health (Pollution) does not hold any records of pollution incidents occurring at the property or in the near vicinity.

2. Contaminative activities at the site.

The site appears to have been used as agricultural land and this may have impacted upon the soils (pesticides/herbicides etc.).

3. Pre-licensing or unlicensed landfilling activities within a 500m radius of the site, including landfill location, depth, presence of lining system, age and type of waste deposits.

Environmental Health (Pollution) does not hold any records of landfill sites within a 500m radius of the site.

4. Results of any landfill gas and leachate monitoring.

No records are held of any landfill gas or leachate monitoring. A Phase 1 Geoenvironmental Assessment was carried out during a recent planning application (Ref: 22/00167/OUT) The document can be found at: <https://pa.hinckley-bosworth.gov.uk/online-applications/simpleSearchResults.do?action=firstPage>

It must be understood that the information provided above is based on records and files from varying sources of varying reliability. Consequently, the Hinckley & Bosworth Borough Council is not able to offer any warranty as to the accuracy or completeness of the information provided, nor can it accept any liability whatsoever for any loss or damage arising from the interpretation and/or use of the information.

I trust the above is of use to you but should you require any further information please do not hesitate to contact me on the above telephone number.

Yours sincerely

A handwritten signature in black ink, appearing to be 'Giles Rawdon', written on a light blue horizontal line. The signature is stylized with a large 'G' and a long, sweeping tail.

Giles Rawdon
Environmental Health Officer
