| Habitat Types | | | | | | | | | | | |
| Individual trees – Urban trees Individual trees – Rural trees Complete a condition sheet for each tree or block of trees. | | | | | | | | | | | |
| Please see the separate Line of trees condition sheet for a line of <u>rural</u> trees. You should only use the Line of trees condition assessment and record that habitat type in <u>rural</u> locations. | | | | | | | | | | | |
| Habitat Description | | | | | | | | | | | |
| Individual Trees located on Site | | | | | | | | | | | |
| Individual trees (description applied to the urban or rural environment): Young trees over 7.5 cm in diameter at breast height whose canopies are not touching. | | | | | | | | | | | |
| Urban Perimeter / Linear Blocks and Groups (description applied to the urban environment only): Groups or stands of trees (size requirement as defined above) within and around the perimeter of urban land. This includes those along urban streets, highways, railways and canals, and also former field boundary trees incorporated into developments. Canopies should predominantly overlap continuously. Groups of urban trees that don't match the descriptions for woodland may be assessed within this category. | | | | | | | | | | | |

| Condition Assessment Criteria | | | | | | | | | | | |
| Criterion passed (Yes or No) | | | | | | | | | | Notes (such as justification) | |
| A | The tree is a native species (or at least 70% within the block are native species). | Yes | Yes | Yes | Yes | Yes | Yes | Yes | No | | |
| B | The tree canopy is predominantly continuous, with gaps in canopy cover making up <10% of total area and no individual gap being >5 m wide (individual trees automatically pass this criterion). | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Yes | | |
| C | The tree is mature (or more than 50% within the block are mature) ¹ . | Yes | No | Yes | Yes | Yes | Yes | Yes | No | | |
| D | There is little or no evidence of an adverse impact on tree health by human activities (such as vandalism, herbicide or detrimental agricultural activity). And there is no current regular pruning regime, so the trees retain >75% of expected canopy for their age range and height. | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Yes | | |
| E | Natural ecological niches for vertebrates and invertebrates are present, such as presence of deadwood, cavities, ivy or loose bark. | Yes | No | No | Yes | Yes | Yes | Yes | No | | |
