Planning Statement and Design and Access Statement for:

Thornton Community Centre
175 Main Street
Thornton
LE67 1AH

Site:

Currently the Community Centre for the small village of Thornton, the existing building are within the settlement boundary. A 1 ½ Storey building used for community events and regular use for local community groups. A Brick Built building with extensions previously approved in 2008.

The proposal is to create an access ramp/raised platform at the rear to allow disabled users to access the rear open space easily. It would also provide better fire escape access for users at the rear. The decking area will also allow for additional space for the community centre to use for functions.

Plans provided show the construction of the ramp/decking., helping to illustrate the changes required.
