Hi David & Emma

Hopefully this information will satisfy the needs of the EA regarding Ground water levels in the Churchyard area.

Best wishes

Jim

Subject: Fw: GWL for the church

Hi both

Please see below some information on Ground water levels that I have been sent from our Ground water team.

Obviously this was sent to me to help where possible with the situation. But is not an official Severn Trent position and Severn Trent would obviously not accept any liability around the use of the information provided

Thanks Justin

Hi

The below is a GIS layer which predicts GWL based on soil types,

The later shows "moderate GW depth" so unlikely to be shallow, the geology there is mudstone with some superficial deposits above. There could be some local "perched" gw (small pockets of water locked in the clay") but I doubt the actual GWL is shallow (<6 feet).

British Geological Survey website info found at the below link.

theres some boreholes associated with the M1 widening which didnt show any significant GW encountered in the upper 8-10m.

<https://api.bgs.ac.uk/sobi-scans/v1/borehole/scans/items/18913712>

The above borehole one is about 500m NE of the church.

Hope this is sufficient show that the Groundwater level is way below level of the church yard extension.

Thanks Justin
