This also includes potential childrens play areas and areas of grassland adjacent to public footpaths. Asigned a poor condition as these areas are likely to be receive regular public use leading to excessive trampling along with regular mowing regimes which will reduce species diversity and sward height. As such these habitats are likely to only pass 3 condition criteria (3, 5 & 6).	Revised upon new layout, areas proposed for amenity value have been categorised as this due to regular management and public disturbance the overall quality of the habitat may not achieve that of other neutral grassland. This inlcudes 1m buffers either side of footpaths

To achieve Moderate condition, areas must have vegetation in common with Other Neutral Grassland according to UKHabs definitions; recommend sowing of 'NS Long Season Meadow Mix' from Naturescape in line with contemporary meadow creation practices. Management plan should include relaxed mowing scheme (up to 4 times in the first year and once annually in autumn in subsequent years) to allow height variation (20% < 7cm and 20% >7cm) with borders near pathway (1-2m strips) kept low by more frequent mowing for tidier appearance. All cuttings from mowing should be removed to prevent nutrient enrichment. Bare ground should cover no more than 5% of grassland area. Cover of bracken (if it appears on site) should be kept less than 20% and cover of scrub (including bramble) less than 5%. Grassland must demonstrate absence of invasive non-native species (Schedule 9 of WCA, 1981). Combined cover of undesirable species AND excessive physical damage from machinery to be less than 5% of total grassland area.	several areas of other neutral bgrassland proposed across the scheme. Currently in poor condition which can be enhanced by reducing the gaps in the base through supplementary planting. Height and width of the hedge should be kept at an average of >1.5m along the length and a gap of <0.5m between the ground and the base of the canopy for 90% of the hedge length, any gaps which appear should be filled with planting of the hedge as intact.-Unfavourable species (nettles, cleavers and docks) should be discouraged from growing however, no greater than 20% ground cover of these species should be present in the hedgerow length and ground vegetation (for at least 1m) should be free of non-native invasive and ruderal/weed (naturalised) species; and lastly, - Hedgerow should be managed sensitively with no excessive cutting, pollution or waste build up. (mowings/household waste/rubbish).
