

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT

- 1.0 Setting out
- 1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using radii called out on the drawing using two pointed stakes and a line between, or with site markers. The junctions between corners and curves shall be cut to form a smooth and even flowing line. Check that all setting out conforms to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.
- 1.2 All planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edges and other structures. With narrow beds between fences and path edges, ensure that the bed has space free from concrete before planting. If the bed is sided with concrete, then the landscape contractor shall control the site manager or landscape architect to determine if the bed can be paved. The width of all beds will be checked by the inspecting landscape architect and where the width is not as shown, the contractor shall re-plant them to the specified width at his own expense.
- 2.0 Ground preparation
- 2.1 Pre-planting herbicide application - Apply by suitable spraying operation, an approved translocated systemic herbicide to the manufacturer's instructions and to 1997 Control of Pesticides Regulations and 2020 COSHH regulations on all beds, except those which are high-sided trees and are to receive agricultural sheet mulch. Spray immediately if any weeds are present. If the weeds are showing but planting is delayed, spray after one month following calibration. To allow removal of weeds to ground level, all spraying shall be carried out by skilled and qualified operatives, using protective clothing in suitable weather (no wind and any damage caused by spray drift from the contractor's own use. Do not spray near a water body. Repeat as necessary to ensure complete kill and take off of all weed material from site.
- 2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from roots larger than 50mm diameter, concrete, all weeds, brick, and have less than 20% clay. Allow for pre-application of herbicide as above. Fertilise with 100g per metre square of horticulture CDF (18-8-12) slow release fertiliser in accordance with the manufacturer's instructions. For beds less than 5 metres in width, fork over thoroughly or machine cultivate soil to a depth of 400mm, ensuring that the subgrade and topsoil are completely broken up and the drawing, relieving any compaction. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 500mm, except where there are services, or within 10 metres of tree stems or 3 metres of existing hedges. Do not rip areas where roots greater than 100mm diameter are encountered.
- 2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation: ensure soil of all planting beds is graded to a level 50mm below adjacent grass or paved surfaces, within 400-500mm of edges to ensure bark or wood chip mulch can be retained. Where grass is proposed adjacent to paving, then the soil level shall be flush with the adjacent paved surface to ensure an even surface. The landscape contractor is responsible for ensuring that the final ground conforms to the specification even where the developer and/or main contractor have failed to supply and spread topsoil to the required level. The landscape contractor shall allow for adjustment of levels, as specified above, including any required subgrade and topsoil. Where beds are sloping, ensure that topsoil is graded to the level of the subgrade below pavement & grass surface within 400mm of the edges of the bed. This is to allow for sheet mulch bark or wood chip mulch to fall into the bed and not spill out on to pavements and also to allow surface water to drain from paths on to planted areas.
- 2.4 Spreading ground that is shown to be below where there is paving adjacent to a topsoil level of the grass areas shall be graded to finish flush with the finished pavement surface to allow surface water to drain from pavements to soft areas. Soft areas of grass areas should therefore never be proud of paved areas. Soil levels more than 10 mm below pavement edges will cause more damage to cutting.
- 2.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3882:2015, and be free from roots (over 50mm diameter), concrete, roots, wire and brick, and have less than 20% clay. Soil that shall be cultivated as set out above. Representative samples shall first be approved for the landscape architect before being applied to site. No imported soil shall be supplied to site without a written instruction.
- 3.0 Planting
- 3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, watering, and trees, and also for contractual maintenance requirements.
- 3.2 No substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace at once as his own cost any stock lost, spoiled or variety of plant which has not been specified on the planting plan and schedule, unless with prior written agreement a substitution has been agreed by the inspecting landscape architect. All plants shall be true to the species specified in the schedule of plants and associated notes.
