REASON FOR RECOMMENDATION:	
We have reviewed the above ecology document and are largely satisfied with the information provided. We request some additional information below. - The report does not state what time the survey ended or whether there was any precipitation at the time of the emergence survey. - No ecological enhancements are included within the report. - Photos from the darkest point of the emergence surveys are not provided. - The site is located within proximity to a 'Swift Alert' zone as it is within proximity of a number of recorded nest sites. Swifts are a declining species, and a priority species in our Local Biodiversity Action Plan, therefore ecological enhancements in the form of swift boxes should be installed on the building. These should be made of woodcrete for longevity, and located at least 5m above the ground, in a shaded area, and with a clear approach.
