

Introduction:

- Over the last 5 years 37% of workplace fatalities in the UK were as a result of being struck by a moving vehicle.
- At higher speeds, vehicle operators have less time to identify and react to what is happening around them. It also takes longer to stop and impacts are more severe.
- Speed limits are in place on all FP McCann sites to reduce the risk of vehicle-related accidents and maintain a safe working environment for both employees and site visitors.

Main Points:

- All site speed limits have been determined based on a number of factors including site layout, bends and visibility at junctions.
- Speed limits are clearly sign-posted throughout all sites.
- **You must adhere to your site speed limited at all times.**
- Always maintain a safe driving distance between you and the vehicle in front of you.
- Be aware of pedestrian areas and walkways.
- Obey all traffic management on site and be aware of “STOP” and “GIVE WAY” signs at junctions.

Remember the speed limit in place is an absolute maximum and not a target. It does not always mean that it is safe to travel at this speed.

Extra care should be taken when:

- Driving on wet and icy ground conditions
- In built-up areas, especially where there may be pedestrians
- Driving downhill
- Approaching bends and junctions
- Driving in dark mornings and evenings
