

Glass

In order to achieve such a highly energy efficient window we only use the latest glass technology from Pilkington known as Pilkington EnergiKare. All windows are supplied with the following glass make-up:

- Inner pane – Pilkington KS
- Outer pane – Pilkington Optiwhite
- Gas filling – Argon Gas
- Spacer bar – black SuperSpacer
- Thickness – 28mm or 40mm for triple
- U-value – from 0.70 to 1.22

In addition, you may also add Georgian bar, Square lead or Diamond lead decoration to your glass.

Other hardware & Ancillaries

Our handles, hinges and other parts are of extremely high quality, sourced from reputable companies.

Flush windows

We now manufacture Heritage 2800 flush casement windows that mimic the traditional wooden windows of period properties, with much better energy efficiency and lower heating bills and are virtually indistinguishable from timber when ordered in colour or woodgrain white. The openers on these windows sit flush in the frame externally rather than standing proud, both inside and outside with our new Heritage 2800 system. Their simple lines and proportions work well in more modern buildings too. We believe our flush casement is the best, far surpassing others on the market in terms of authentic design and energy efficiency, A rated as standard with double glazing. Photos of our windows at the gallery below. All the joints of our windows are 45 degree welded joints.
