Comments Details

	Condition 14 (Noise) As stated in section 5.4 no acoustic feature correction has been applied for the initial BS 4142 assessment- the predicted noise levels are +5dB above background level (without correction).
Comments:	Section 5.4 includes "However, should it be considered appropriate to reduce noise levels at the property, such that the night-time noise levels were equivalent to those previously assessed, mitigation could be provided for the plant located in TX5, TX8 and TX9, which are closest to the property. For these plant areas, consideration could be given to utilising sound reduction kits on the inverters or providing acoustic fences to screen the plant from the

property”.

I feel that it would be appropriate to reduce the noise levels and details should be provided.

Kind regards
