

DESIGN AND ACCESS STATEMENT.

The village hall is a relatively modern building with a steeply pitched plain tile covered South Westerly roof elevation facing The Green (main highway to the building) in the heart of the village and adjacent to the parish church.

The design advice given by the LPA has been followed in respect of a neatly laid out and symmetrical array on the main South west elevation of the pitched tiled roof.

PLANNING STATEMENT.

The village Hall committee would greatly appreciate both cost savings and environmental contribution by providing their village hall with a renewable energy space and water heating source and battery storage system to greatly enhance the long term economic comfort and extended utility of the building for the enjoyment of year round community activities.

It is presumed that the angle of the panels and their distance from all other village properties will result in no detrimental effects.
