SUMMARY OF ECOLOGICAL DOCUMENTS CONSIDERED:	
- Existing elevations – No R101 (February 2025) - Proposed elevations – No PL201 (March 2025) - Proposed site – No PL101 (March 2025) - Proposed site plan - PL101 – Rev A (March 2025)	
REASON FOR RECOMMENDATION PROVIDED:	
- The proposed works consist of a two storey rear extension. Sited within a rural area leading out into the wider agricultural habitat and nearby a watercourse, providing suitable foraging habitat and good connectivity routes for bats. - The works involve extensive alterations (but is not limited to) the roof, roof void, roof line, soffits and tiles of the existing dwelling which provide potential access and suitability for roosting bats. Bats are particularly associated with the roof structure of buildings, including lofts, rafters, beams, gables, eaves, soffits, flashing, ridge-tile, chimneys, the under-tile area, etc. but may also be present in crevices in stone or brickwork and in cavity walls. - Therefore, the submission of a Preliminary Roost Assessment (PRA) will be required on the existing dwelling prior to commencement. The survey will need to be carried out by a	

suitably licenced ecologist and can be carried out at any time of year. The PRA should include photographs, internal and external of the potential roost features (PRF) and preferably any PRF locations highlighted on an aerial map for reference. • This survey should also include recommendations to inform any ecological enhancements that might be necessary as a result of the survey. • We have a holding objection until this is supplied. The survey should be submitted and approved by the LPA prior to determination.
BIODIVERSITY NET GAIN (BNG) SPECIFIC COMMENTS:
•
FURTHER INFORMATION REQUIRED:
• Submission of a Preliminary Roost Assessment (PRA) is required on the existing dwelling in order to make further considerations. This should also scope in any potential opportunities for ecological enhancements.
