

Parking Provisions

As part of the ongoing maintenance requirements for the installed solar panels, it has been determined that no additional parking provisions are necessary. This decision is based on the following considerations:

- 1. Minimal Maintenance Needs:** Solar panels typically require infrequent maintenance, involving periodic inspections and occasional cleaning. These activities do not necessitate the prolonged presence of maintenance personnel or vehicles.
- 2. Efficient Use of Existing Facilities:** Current parking facilities and access points are sufficient to accommodate the temporary parking needs of maintenance teams without causing disruptions to regular operations or surrounding areas.
- 3. Environmental and Logistical Benefits:** Avoiding the construction of additional parking spaces aligns with our commitment to environmental sustainability. It also simplifies logistical planning, as maintenance teams can utilise existing infrastructure without the need for modifications.

In summary, the installation of solar panels and their subsequent maintenance do not require any additional parking provisions. The existing parking facilities will adequately support the maintenance operations, thereby ensuring efficient and sustainable management of the solar panel system.
