DESCRIPTION

Description

Floodtite Toilet 'Panseal' is an essential anti-flooding device for a downstairs toilet which creates a secure seal around the toilet pan rim to prevent the back-flow of flood and foul waste water. It is fitted in seconds and requires nothing more than a few squeezes from a normal bicycle pump which is included in the pack.

Position the 'Panseal' directly below the pan rim. Pump in air using a bicycle pump and the expansion takes place creating the required seal.
