

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using rails staked on the ground using two parallel stakes and a fine batten, or with a master cane. The junction between curves and straight curves shall be cut to form a smooth and even flowing line. Check the all setting out conforms to the existing landscape and planting works are carried out. Failure to do so will result in rejection of the work by the landscape architect and may require amendment of the contractor's expense.

1.2 All planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edgings and their functions. With narrow beds between walls/fences and path edging, ensure that the bed has space free from concrete footings before planting. If the bed is sealed with concrete, then the landscape contractor shall contact the site manager or landscape architect to determine if footings are excessive and can be reduced or else, the bed can be paved. The width of all beds will be checked by the inspecting landscape architect and where the width is not as shown, the contractor shall re-align them to the specified width at his own expense.

2.0 Ground preparation

2.1 Preexisting herbicide application- Apply by suitable spraying apparatus, an approved translocated systemic herbicide to the manufacturer's instructions and to: 1987 Control of Pesticides Regulations and 2020 COSHH regulations on all beds, except those which are both sealed and are to receive agricultural steel mulch. Spray immediately if any weeds are present. If no weeds are showing but planting is delayed, spray after one month following cultivation to allow contact weed to germinate. All spraying shall be carried out by skilled and qualified operatives, using protective clothing, in suitable weather (no wind) and any damage caused by spray drift, from adjacent areas or foliage, shall be rectified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and care of all soil related from site.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2013, bring free from rocks larger than 50mm diameter, correct all roots, wire, brick, and have less than 20% clay. Allow for permeability of herbicide as above. Fertilise with 150g per metre square of Hortobac CRF 154-10 slow release fertiliser, in accordance with the manufacturer's instructions. For beds less than 5 metres in width, fork thoroughly or machine cultivate soil to a depth of 450mm, ensuring that the subgrade and topsoil are completely broken up and mixing, ensuring any amendments. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 500mm except where there are services, or within 10 metres of the base of a 2 metres of existing footings. Do not rip areas where roots greater than 10mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation. Remove soil of all planting beds to grade to a level 50mm below adjacent grass or paved surfaces, within 450-500mm of edges to ensure bank or concrete edges are retained. Where grass is proposed adjacent to paving, then the soil bed shall be flush with the adjacent paved surface, to receive rain water run off. The landscape contractor is responsible for ensuring that the final product conforms to the specification even where the developer and/or main contractor have failed to supply and spread topsoil to the required level. The landscape contractor shall allow for adjustment of levels, as specified above, including for existing natural and topsoil. Where beds are sloping, ensure that topsoil is graded to the specified levels below pavement & grass surfaces within 400mm of the edges of the bed. This is to allow for sheet mulch and bank or wood chip mulch so that mulch does not spill out on to pavements and also to allow surface water to drain from bank to paved areas.

2.4 Shaping ground that is shown to be buried there is a paving adjacent to a topsoil levels of the grass areas shall be graded to 50mm from the finished pavement level to allow surface water to drain from pavements to soft areas. Soil of grass areas should therefore never be proud of paved areas. Soil levels more than 10 mm below pavement edges will cause severe damage or cutting.

2.5 Imported topsoil where specified and sanctioned by the employer for making up ground, shall conform to BS 3882: 2013, and be free from roots (over 50mm diameter), concrete, rocks, wire and brick, and have less than greater than 20% clay. Sun soil shall be cultivated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, soffits, and trees, and also for contractual maintenance requirements.

3.2 No substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace or one of his own cost any stock, plant species or variety of plant which has not been specified on the planting plan and schedule, unless via written agreement. A substitution has been agreed by the inspecting landscape architect. All plants shall be to size specified in the schedule of plants and associated notes.
