

Tree Report for T1 Sycamore located at Penlan, Wykin Road Hinkley

Photo 1 showing physiological decline and deadwood of upper crown crown (taken in late summer 2024) and proximity of tree to public highway, footpath and utilities.

Photo 2 showing physiological decline and deadwood of upper crown crown (taken in late summer 2024)

Photo 3 showing location of large limb failure (taken in December 2024)

Photo 4 showing close up of large limb failure with white rot present (taken in December 2024)

The tree is located in the front garden of the property with a public footpath, highway, utility cables and the residents driveway underneath.

Following the recent limb failure the tree and the continual physiological decline of the canopy crown reduction works would not be advised.

Due to the large limb failure the main trunk of the tree will continue to decay and will become more hazardous over time so it would be best to remove the tree and replace it with a similar species in the same location.
