

Planning Application 22/01174/FUL

Information for the discharge of condition No.5- The treatment of the PROW along farm drive.

During construction the public footpath will be unaffected. The footpath runs alongside a hard track. There is a minimum of 1.5M wide grass stripe that is regularly mown- Please see [photos 2 and 3](#) of the farm track. The farm track is used predominately by large farm equipment, Larger than any machines used in the construction of the proposed holiday let. The width of the track comfortably allows the large machinery and walkers on the footpath to pass safely. We will also put-up extra signage at each end of the footpath to make walkers aware of construction machinery using the track.

The majority of vehicle movements during construction will be builders going to site in a van.
