Supporting information from Persimmon

25/00282/DISCON

Through discussion directly with Highways Officer regarding the Construction Traffic Management Plan, it was understood that the preferred option was to use the main access as our construction route. After taking on those discussions, please see attached amended Construction Management Plan for reconsideration for conditions 25/00282/DISCON (CEMP) & 25/00289/DISCON (Construction Traffic Management Plan). This amended plan proposes the existing farmers access to be used until the main approved access (S278) is operational. At this point all construction traffic will be routed into the development through the main access.

The Construction Traffic Route has also been re-routed to reflect the suggested route from the Highways Officer.
