While AC and ventilation systems are to be designed and installed by specialists, such design and installation will comply with part F of the Building Regulations, BS5720 Code of Practice for Mechanical Ventilation and Air Conditioning in Building and BS5925 Code of Practice for Design of Building Ventilation Principles and Designing for Natural Ventilation. Units are to discharge directly to the outside air and to be capable of being operated intermittently. AC system to be designed by specialist and to be shut down on alarm actuation. Condenser condensate pipes to discharge into a local drainage system. Location of units indicated may be indicative and subject to an M&E investigation and approval from the appropriate L.A. Departments. Refer to the specialist M&E drawings for further detail.

Approximate sized at 907mm long, 1258mm high and 370mm deep. Weight at 114kg, noise level at 56DB constant when in use. (To be design and installed by specialists). Typical size may vary to suite actual manufacturers specification

Possible location for new AC condenser units to specialists design and installation ensuring that condensate outlet pipe discharges to local drain (i.e. rainwater gutter). Units supported on load spreading and sound insulated pallets all to specialists design and Structural Engineers approval. Feed pipes taken over suspended ceiling and sealed where passing through wall structure
