

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds that be set out using arcs centred on the ground using two posted stakes and a 3m batten, or with site marker paint. The junction between corners and corners should be cut to form a smooth notched batten line. Check that all planting out conforms to the plan before cultivation and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 All planting beds shall be a minimum of 1 metre wide, except where there is a sufficient space, due to the constraints of walls and path edges and their foundations. With narrow beds between walls and paths edges, ensure that the bed has space free from concrete edging before planting. If there is a wall edge, concrete, then the landscape architect shall control the way in which the landscape architect determine the layout of any concrete and/or for notched or after the bed on to be planted. The width of all beds will be checked by the landscape architect and where the width is not as shown, the contractor shall no cultivate them to the specified width at its own expense.

2.0 Ground preparation

2.1 Preparing herbicide application - Apply by suitable spraying equipment, an approved tanked system herbicide to the manufacturer's instructions and to 1997 Control of Pesticides Regulations and 2003 COSHH Regulations on all areas except those which are to be left free and are to receive aggressive weed mulch. Spray immediately if any weeds are present. If the weeds are showing but planting is delayed, spray after one month following cultivation. To allow dormant seeds to germinate. All spraying shall be carried out by skilled and qualified operators, using protective clothing in suitable weather (no wind and no damage caused by spray drift from nearest edge of spraying, shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and take off of weed material from site.

2.2 Carry out the following works to the existing topsoil on site in order to ensure it conforms to BS 3862:2015, being the best soil for the site. For all areas, all soil, all rock, weeds, and less than 20% clay. Allow for pre-cultivation of herbicide to above. Fertilise with 50g per square metre of phosphate CFP (15-0-15) slow release fertilizer in accordance with the manufacturer's instructions. For most lawns less than 5 metres in width, lawns over 5 metres or machine mowed soil to a depth of 40mm, ensuring that the subgrade and topsoil are completely mixed up and the drainage, allowing any compaction. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 300mm except where there are services, or within 10 metres of two drains or 2 metres of existing edges. Do not cut areas where roots greater than 10mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation required for all planting beds to be created. The landscape architect shall allow for adjustment of levels, as specified above, including any necessary subsoil and topsoil where beds are sloping, ensure that topsoil is graded to the specified levels below pavement & grass surfaces, 40mm of the edges of the bed. This is to allow for sheet mulch and bark or wood chip mulch to be laid over the topsoil. The topsoil shall be laid over the topsoil and to the specified levels below pavement & grass surfaces. Do not cut areas where roots greater than 10mm diameter are encountered.

2.4 Spacing ground to 100mm levels of the grass areas shall be graded to form flush with the finished pavement level to allow surface water to drain from pavements to soft areas. Soil of grass areas shall therefore never be level of ground level. Soil levels more than 10mm below pavement edges will cause more damage on cutting.

2.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3862:2015, and be free from roots (over 10mm diameter), concrete, roots, wire, and less than 20% clay. Such soil shall be adjusted to the specified levels below pavement & grass surfaces. The landscape architect shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and take off of weed material from site.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, watering, and weeding, and also for contractual maintenance requirements.

3.2 Where subsoil is to be accepted without the prior approval of the landscape architect, the contractor shall replace it once at his own cost any stock hole, spade or variety of plant which has not been specified on the planting plan and elsewhere, unless a prior written agreement, a substitution has been agreed by the landscape architect. All plants shall be true to the species specified in the schedule of plants and associated notes. (1) All plants are 10mm diameter and 10cm deep, (2) All plants are 15mm diameter and 15cm deep, (3) All plants are 20mm diameter and 20cm deep, (4) All plants are 25mm diameter and 25cm deep, (5) All
