Design and access statement

20th February 2009

We are applying for planning permission to add one new white double glazed UPVC window to the rear of the premises which overlooks the yard area at the back of Ashfields Restaurant (No. 4 on the OS sitemap). See accompanying photos for proposed window position.

The window will be on the ground floor level and will be placed sufficiently high so that it cannot be seen into or out of from the ground and fitted with obscure glass. The purpose of the window is to allow more natural light in to the building – the use of the building itself remains unchanged and there are no access restrictions/changes or environmental/ecological issues.
